RESTRUCTURING: A COUNTER PROPOSAL TO THE ARRL

Just as we all thought it was quieting down, restructuring of the United States Amateur Radio Service is front and center once again. This, as a small group that opposes the quantity over quality approach takes a massive counter proposal to the FCC. The group is headquarted in Florence, Alabama and Amateur Radio Newsline's David Black, KB4KCH, is at our South-East Bureau in near-by Birmingham, with more:

--

Robin Gist, K4VU, listened to the ARRL's plan to restructure amateur radio and didn't like it.

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

Gist and five other hams who make up a group called the Radio Amateur Foundation, drew up their own plans for restructuring ham radio. Their 59-pages of suggestions are now in the hands of the FCC. Gist calls the Foundation's petition a comprehensive plan for progressive and thoughtful restructuring. The group suggests taking the Technician class license, making a few changes, and turning it into amateur radio's entry level license. Gist is not pleased with the League's plans for the Technician license:

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

The group suggests giving Technician class hams restricted HF privileges. And it strongly advocates keeping the code--5-word-per-minute Morse code proficiency would be maintained for General and Extra class licenses. Keeping Code, Gist says, is important to help amateurs provide emergency communications.

Under the foundation's proposal, the Novice and Advanced licenses would no longer exist. Current Novice and Advanced license holders would automatically be upgraded to the next category--a novice would become a Technician and an Advanced class ham would become an Extra.

Another big change comes in amateur radio testing under the Foundation's plans.

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

The Foundation suggests not releasing question pool questions to the public.

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

Gist believes hams should have to wait at least 10 days before taking a failed amateur radio license test again.

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

Gist says amateur radio should be quality over quantity. A service of radio operators who have a sense of value and appreciation for amateur radio. That is what Gist says the Foundation's goals are really all about.

From the Southeastern Bureau in Birmingham , Alabama, I'm David Black, KB4KCH, for The Amateur Radio Newsline.

--

While there are well over a dozen restructuring proposals already before the FCC only one has really gotten any major attention of the ham radio community. That’s the plan offered up by the A-R-R-L and referred to by Gist. As we go to air, no Rule Making designation has been assigned by the FCC to the Foundations regulatory change request. (QRZ.COM, ARNewsline(tm))

**

THE BPL FIGHT: WHAT HAMS CAN DO

Meantime, the story that refuses to go away has yet some new twists. Of coarse we are referring to the imminent introduction of Broadband Over Powerline Internet access, and the massive interference that ham radio operators believe it will create. Amateur Radio Newsline’s Mark Abramovicz, NT3V, is here with the latest:

--

Now that the FCC has released the Notice of Proposed Rulemaking in the Broadband Over Powerlines issue, it's time for amateurs to look it over, digest it and begin composing a well-reasoned letter or e-mail.

So says Jim Haynie W5JBP the American Radio League's president. Here are some things in the filing you might consider.

"Noise levels, potential interference both ingress and egress. Those are things that need to be addressed, " Haynie says. "Public relations: What's going to happen when you get on the air on 20 meters and you knock 10 of your neighbors off line all of sudden? They call the local power company, it's a public relations nightmare."

Haynie says once you decide to write that letter, keep in mind it has to be supported with facts.

"I don't see much water being drawn if somebody writes a letter and says, 'Well, this is good for this and it's good for that and it's going to interfere with my ham radio hobby and stuff.' I never, ever use the word hobby to anybody in the Washington. It's the Amateur Radio Service," Haynie says.

"And what you've got to do is use a little bit more fact, a little bit more of concrete-type evidence that you can conclude on your own. And that's pretty simple to do. It's got to be well-reasoned arguments. It can't be emotional argument."

And, once you've finished the letter or e-mail, Haynie says make a copy or print a copy of what you've prepared.

"Put it in an envelope with your QSL card and send it into your local representative at his district office, not in Washington but his district office," Haynie advises. "I'm just amazed how much power that letter has to your local congressman and your local senator when you mail it to one of his local district offices."

Haynie continues to express disappointment the FCC failed to wait for a report from the National Telecommunications Information Agency. The agency oversees radio spectrum use by government agencies and services, including the military. He says its technicians have been busy at BPL trial sites across the country.

"We know that they've done over 18,000 measurements over the last four months in the various (BPL) test areas," Haynie says. "We have gotten actually photographs of their trucks, we've seen them working hard at it. And that's what surprised me that the commission rolled this out before the information was made available.

"We were told by NTIA that it would be available the first part of this year. Now in government-speak, I don't know what that means. I know we got, the

League's got petitions sitting up in the commission now since I took office as president in 2000. It is 2004 and they're still sittting on somebody's desk.

"So, FCC and NTIA, I'm sure, have their own timetables and they're not going to worry about what the ARRL or what some ham radio operators think about it. They're going to do their own work in the own way in their own time."

Haynie hopes the NTIA finishes its work soon and gets its report to the FCC pronto. He says it's clear BPL is targeted for special FCC attention.

"I think they'll put this on the fastest of fast tracks and get something going," Haynie says. "Typically, the window, the comment window will be 45-60 days. I'd be really surprised if they gave it 90 days.

"And, once that's done they start the wheels in motion and they'll (FCC) be under tremendous pressure from industry to get this thing out the door."

Haynie says the amateur radio service has allies in this fight and he's confident they will submit comments or speak to their congressmen or senators. Haynie says he's both cautious and optimistic about the outcome.

"I'm very concerned because I've seen the speed at which this thing has happened," Haynie says. "And I've seen the comments that the commission has made and I've seen the denials that the industry has made.

"And it just doesn't make sense. There's something more behind this. And I know people are going to say it's the almighty dollar. And that's true, it probably is. You're looking at millions and millions and millions of dollars of investment here.

"But there's something that just doesn't smell right, I guess, is what I'm trying to say. So, until I get a better handle and the League - our staff people get a better handle on where this is going and trust me we're on top of it every day - I'm just going to be to on the little plus side of a little cautious."

And finally, Haynie says to those who think the ARRL and other hams are overreacting like Chicken Little who cried out: The sky is falling! The sky is falling! He has these sobering thoughts.

"Just because we want, doesn't mean that we get our way. And I'm concerned about that," Haynie says. "And I'm concerned about another possibility that's probably the horror of all horrors.

"And that is if the (BPL) rollout is so big and you get tens of hundreds of thousands of people on, suddenly amateur radio relegates down to the same level as Part 15. That would be the most horrible thing that could happen to amateur radio."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia

--

To read or download the Notice of Proposed Rulemaking from the FCC on Broadband over Powerlines, you can find it on the FCC's website: www-dot-fcc-dot gov. And, to learn more more about the ARRL's position, go to www.arrl.org. (ARNewsline(tm))

**

THE BPL FIGHT: A WIN IN 4X4-LAND

Even though the BPL outlook looks a bit grim here in the United States, there has been a big win over in Israel. Hagal International says that equipment for the networking of computers over the A C power mains being sold in the country was found to be causing interference to High Frequency spectrum users. As a result, Israel’s Ministry of Communications requested an explanation from the distributor of this equipment on how to remedy the problem. The distributor did one better. The company replied that it had discontinued the sales of the interfering devices. (Hagal International)

**

RADIO HONORS: W. VA GOVERNORS FATHER WA8AYP REMEMBERED

Here in West Virginia, Governor Bob Wise strolled into his reception hall last week to present a check to Kanawha County officials. Little did he know that those officials – and some amateur radio operators – had a very special surprise for him.

The money, fifty thousand dollars, was awarded to the county for the purchase of amateur radio equipment for the metro area’s new emergency operations center, and a new mobile command post.

As he usually does when speaking about amateur radio, Governor Wise began to reminisce about his father. He recalled hearing the sounds of CW from his father’s Hallicrafters receiver wafting into his bedroom at night. He even remembered his father’s amateur callsign, WA8AYP. At that moment, his attention was directed to a nearby FT-847 to receive a message.

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

That’s control operator Bill Hunter, K8BS, telling the governor via amateur radio that his father’s callsign is now the club callsign of the Kanawha County ARES/RACES group. The announcement was not only a complete surprise, the governor appeared clearly touched. After a moment, he quipped, “Hey, do I get a QSL card for this?” He was quickly presented with a specially designed QSL card. After the ceremony, the governor signed copies of those cards, and posed for pictures with the estimated 75 ham operators in attendance.

The surprise was the brainchild of Kanawha County Commission President Kent Carper, W8CHS, who appears to be one politician who can keep a secret.

Robert Wise, Senior became a silent key in 1986. He was active in emergency communications during the 1960’s and 70’s. (ARNewsline(tm))

**

RADIO HONORS: FCC NAMED TO RECEIVE NCAI LEADERSHIP AWARD

The FCC has been named by the National Congress of American Indians to be the 2004 recipient of it’s prestigious NCAI Leadership Award. The regulatory agency was selected based on its outstanding leadership and ongoing commitment and support to American Indians and Alaska Natives.

The National Congress of American Indians gives only three of these awards annually. One goes to Congress, one goes to the Administration, and one goes to another deserving entity. This year's recipients are House Natural Resources Committee Chairman Richard Pombo of California, the US Commission on Civil Rights, and the FCC. (FCC)

**

HAM RADIO TESTING: QPC WITHDRAWS A GENERAL TEST QUESTION

The Question Pool Committee of the National Conference of Volunteer Examination Coordinators has announced the withdrawal Question G5B11 from the Element 3 General class question pool. The QPC says that the question deleted asked what would be the RMS voltage if you combined two or more sine wave voltages?

According to QPC Chairman Scotty Newstadter, W4WW, the withdrawal refers to question G5B11 in the new, December 1, 2003, released General pool. It is not referring to the same numbered question in the pool that expires at midnight, June 30, 2004. (QPC, W4WW)

**

ENFORCEMENT: JACK GERRITSEN, EX-KG6IRO IN JAIL

Californian Jack Gerritsen, the ex-KG6IRO, will be spending time in jail, but not for his alleged interference to ham radio repeaters in the Los Angeles area.

On Monday, February 23rd, Federal Court Judge Carolyn Turchin sentenced Gerritsen to 30 days in jail and ordered him to pay a $2500 fine on a tresspassing charge. In passing sentence, judge Turchin explained that she could not place Gerritsen on formal probation as the U-S Attorney asked, because he was going to spend his entire sentence in jail with no time left for probation. The Judge told Gerritsen that he has until May 15th to pay the fine or a lien will be placed on his home in the city of Bell.

Gerritsen's alleged harassment of area repeaters had brought numerous letters to the court asking that it bar him from operating any sort of radio transmitter. In a statement to the court Judge Turchin noted that she had read many of the notes sent to her by the amateur community but that she would not be able to take them into consideration for this case. This was because the charges were brought because Gerritsen failed to obey a sign in the Courthouse and entered a door to the roof of the building.

Judge Turchin did say that she she would forward all the letters to the Federal Probation Department to be put in Gerritsen's file. The ex-KG6IRO was then taken into custody by U.S. Marshals and escorted away. (ARNewsline(tm))

**

WITH THE ARRL: LEAGUE LOOKING FOR COMMENTS ON VHF+ CONTESTING

The ARRL is looking for input from VHF and UHF contesters to help improve the radiosporting events they take part in. According to a posting top the VHF Reflector by New England Division Director Tom Frenaye, K1KI, for the last year or so the League has been studying ways to increase interest and participation in VHF and above contests and awards. Now its ready to go further and it is inviting the ham community to take part. We have more in this report:

--

Tom Frenaye, K1KI, heads up the ARRL's VHF-UHF Contest and Awards Subcommittee. He says that changes to the contest rules and awards programs should be designed to do three things. First, to encourage more people to work more other people. Second, to bolster the number of QSO's made over longer distances. And lastly, to encourage more people to just join in and participate.

Because of this, there are now some recommendations coming from those in the ARRL who have studied the situation. These incclude making changes in the QSO points and rover rules. Also under consideration is limiting the June VHF QSO Party to the bands from 50 to 1296 MHz only, expanding the Microwave contest based on 10 GHz Cumulative and dropping the current UHF contest. Added would be new contest categories in January, June and September.

Frenaye notes that these major recommendations, and a number of minor ones, are still just that -- recommendations. He says that the ARRL feels it is now very important to have further input from the VHF and above contest community before proceeding. He asks all contesters interested in these bands to take an in-depth look at the preoposed changes and then to respond. He hopes that a lot of you will.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP, reporting.

--

You can e-mail your ideas and comments on or before March 7th to vhf-contest-proposal@arrl.org. (K1KI via VHF Reflector)

**

CW SAVVY: A MORSE CODE SYMBOL FOR THE "AT SIGN"

Computer fanatics who also like operating C-W listen up. Radio Currents Online for February 16th says that the International Morse Code is being updated to include a new character for the "at sign". In December, the International Telecommunications Union voted to create the character which will be known as a commat. The commat is made up of dot-dash for the letter A and dash-dot-dash-dot which we all know is the letter C. The two characters are combined with no space between them giving Morse code web surfers an easy way to send an e-mail address or the location of a webpage. (CGC)

**

CONVENTIONS AND HAPPENINGS: THE QCWA 2004 HAMVENTON DINNER

On the convention scene, word that the Quarter Century Wireless Association will hold its 2004 Hamvention Banquet at 7:30 p.m. on Friday, May 14th. Hosted by hosted by South West Ohio Chapter 9 the location this year is Alex's Continental Restaurant near the Dayton suburb of Miamisburg. Cost per person is $ 17.00 and advance reservations are required. Send requests and payment to Jerry Ragland, 409 Park Avenue, Franklin, Ohio, 45005. (QCWA)

**

ARRL SM ELECTIONS: THE RESULTS ARE IN

Turning to names in the news, word that Patrick Bunsold, WA6MHZ, has elected as the ARRL San Diego Section Manager in the only contested election this winter. Bunsold received 378 votes and his opponent, Stephen Early, AD6VI, garnered only 258 votes.

Election ballots were counted February 24 at ARRL Headquarters. Bunsold's two-year term of office begins on April 1st. All other Section Managers standing for re-election ran unopposed. (ARRL)

**

NAMES IN THE NEWS: THE OTHER SIDE OF THE CONTROL ROOM GLASS

And Amateur Radio Newsline President and Producer, Bill Pasternak, WA6ITF, is now the author of a new column dealing with ham radio operators working in the broadcasting profession appearing on the famed HalEisner.Com website.

Bill’s calls his commentary “The Other Side of the Control Room Glass.” It tells the stories of famous and no-so-famous people in the broadcast profession who share a common interest in Amateur Radio and the way in which being a ham has affected their careers.

The column began on Sunday, February 22nd with the first of a 4-part tribute to the late Roy Neal, K6DUE. This series will include a retrospective on Neal’s successful effort to put a manned Amateur Radio station into space.

“The Other Side of the Control Room Glass” becomes a monthly feature of the website in April. You can read it on-line at www.haleisner.com
(ARNewsline(tm))

HAMS HELPING HAMS: THE MIKE NEWBOLD, K0YO FUND

A fund to help 6 meter rover operator Mike Newbold, K0YO. It was set up by a group of hams who value Newbold’s contributions by putting his life on-the-line to get rare grid squares on the air. And late last year it almost cost him his life. Bruce Tennant, K6PZW, has the rest of the story:

--

According to a posting on QRZ.com made for Phil Krichbaum, N0KE , Mike Newbold, K0YO, was vacationing in Baja Mexico just before Christmas 2003. He was savagely beaten with a pipe, robbed and left for dead. The same thugs also killed two Canadian surfers who were camping about 100 yards away from Newbold and threw their bodies and those of their dogs over a cliff.

Kirchbaum says that Newbold crawled 3 kilometers on his hands and knees through cactus and over rocks to a road where he had a better chance of being located. Some surfers from Los Angeles found him the next day. They took him to a medical facility and contacted the police. They then transported Newbold back to California for further medical treatment. Newbold then went back to Steamboat Springs, Colorado, where his son took him for additional medical care and then home for a Christmas eve dinner. Kirchbaum says he has since visited Newbold brought him a 2 meter F-M radio donated by Bob Ludtke, K9MWM. Thats where he learned that the value of items lost and stolen in Baja easily exceeds $10,000.

To help defray the cost of replacing Newbold's pick-up truck, camper and ham radio gear that he and Gary Yantis, W0TM have established he Mike Newbold Fund. If anyone would care to make a donation to help get Newbold back on the road to rare grids, please contact W0TM or N0KE. Their respective e-mail addresses are gyantis@midtec.com and pfkski@vail.net.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

You can read more about Mike Newbold, K0YO, and what happened to him on-line on line on the newspages at www.qrz.com (QRZ.COM)

**

HAM RADIO IN SPACE: SUCCESSFUL OHIO ISS CONTACT

Friday, February 20th was a great day for youngsters at Ohio's Glenwood Elementary School. That's when International Space Station Commander Mike Foale, KB5UAC successfully answered questions from a number of students. Better yet, Bill Chalkin, KA8VIT, in nearby South Euclid was listening and recording. Take a listen to a ham radio from space:

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

In all, sixteen students got to question KB5UAC about life on-orbit. According to the AMSAT News Service preliminary reports indicate the space station side of the conversation was heard as far East as Boston and Baltimore. (AMSAT, ARNewsline(tm) with audio from KA8VIT)

**

INTERNATIONAL - WORLDWIDE: NO RECIPROCAL 5 MHZ OPERATIONS

Turning to international news, a reminder that holders of United Kingdom 5 MHz operating permits are reminded that CEPT international operating rules does not apply to 5 Mhz. The only countries currently allowing 5 MHz operation by individual stations are the United Kingdom and the United States. Only club stations are presently being allowed to use 5 MHz in Finland and operations by stations in Norway and New Zealand are for internal emergency communications purposes only. Stations in Canada may use 5 MHz frequencies at agreed specified times but activity from Germany is not currently permitted. (GB2RS)

**

ON THE AIR: FIELD DAY 2004 - JUNE 26-27

Turning to operating events, the ARRL Letter says that rules and entry packets for the 2004 running of ARRL Field Day now are available on the League's Website. The ARRL Letter notes that Field Day is always the fourth full weekend of June. This year it's June 26th and 27th with activity beginning at 1800 UTC Saturday and ends at 2100 UTC Sunday.

There are no rules changes from 2003. Participation in Field Day now is open to all amateurs within IARU Region 2. Field Day stations may contact stations in other regions for point credit, but stations outside Region 2 are not eligible to submit entries for this event.

More information is on-line at www.arrl.org (ARRL)

**

DX

In D-X, I2YSB, I2MOV, IK1AOD and IK2DIA, have been on the air from Tokelau signing slash ZK3. They now say that they plan to be active portable 5 W from Samoa on all bands and modes between the 29th of February and 8th of March. Look for them on the usual D-X frequencies. (GB2RS)

Also, K4ISV and K4CN will be active slash VP5 from North Caicos Islands through the 17th of March. They will also participate in the CQ 160-Metre SSB contest as VP5B. QSL as directed on the air. (GB2RS)

And a Galapagos Islands "HC8/HD8 DX Diploma" is now being issued by the DX-TA-SEA DX Club. This multicolored certificate is awarded to Amateur Radio operators and short wave Listeners for confirming a minimum of 3 different HC8 or HD8 stations in the Galapagos Islands. All contacts or SWL reports made after November 20, 1945 are eligable. Submissions and information requests go to Dr. Rick Dorsch, NE8Z, P.O. BOX 616, Hamburg, Michigan 48139 -0616 (NE8Z)

'**

RADIOSPORTS: HES OFF AND WALKING

He's on the road again. We are talking about Tony Whitaker, G3RKL, who is off on his latest trek. Amateur Radio Newslie's Jim Meachen, ZL2BHF, has the details:

--

His short walk has begun!:

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

That's the voice of Tony Whitaker, G3RKL, as he begins his pre-announced trek from Invercargill to Blenheim. What’s amazing is that recording comes to you from the other side of the world. From the United Kingdom, where it was recorded by Ian Abel, G3ZHI, in Yorkshire England. How? Through the magic of Internet linked repeaters that will allow the world of Amateur Radio to follow Tony’s almost every step of the way:

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

During his stroll Whitaker will be on the air using the special callsign ZL6SHS. And -- you will literally find him operating everywhere including HF, VHF and UHF. And when access to an IRLP or Echolink equipped repeater is available, he just might pop up in your back yard, eager to say hello.

So, keep an ear open for Tony Whitaker, G3RKL, as ZL6SHS as he jauntily saunters the length of New Zealands South Island. He might be coming to an Internet linked repeater in your hometown and right to your H T.

--

Audio only: Hear it at www.arnewsline.org on the MP3 audio file of this newscast.

--

With thanks to Ian Abel, G3ZHI, for the audio of Tony’s first few minutes on the road, I’m Jim Meachen, ZL2BHF, reporting from Auckland, New Zealand for the Amateur Radio Newsline.

--

With access to Echolink and IRLP now quite common you can expect to hear more from G3RKL here on Newsline in the coming weeks. (ARNewsline(tm) with audio supplied by G3ZHI)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the newly created Roy Neal, K6DUE, Amateur Radio Mentoring Project is up and operating. We already have signed up over two dozen hams who

are willing to assist others. If you can help, or if you need assistance
please drop a note with your name, address, hone number and area of expertise
to mentor@arnewsline.org and we will get back to you as fast as we can.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Jim Damron,
N8TMW, and I’m Jeff Clark, K8JAC, saying 73 and we thank you for listening."

This is the downside of the sunspot cycle, and as such, 10 meter activity is very spotty. Regardless, I'd suspect ANY radio that has had an 11 meter modification done to it.

Yeah, I agree which is what really ticks me off about his whole thing. There was no indication the the item listing on ebay that the rig had been modified. The seller claims that the picture made it clear it was modified but I certainly didn't notice it. It never occurred to me that it might have been modified. Live and learn.

Last night I logged into the dx packet cluster and saw some spots for 10m but was unable to hear any of them. Nobody responded to my request to listen for me on 10m either.

I suspect my antenna. I'm using an old mag-mount mobile antenna and even though I show good swr I'm skeptical of the gain.

I will throw up a dipole this weekend and try again.

If I still don't hear anything I'll try to find a local ham with a 10m setup and do an A/B comparison.

Thanks for all the feedback.

Greg.

Amateur Radio Newsline(tm) Report 1386 � March 5, 2004

The following is an advisory. Ladies and gentlemen, with a list of thank-you's for supporting us, heres our Treasurer and Support Fund Administrator Andy Jarema, N6TCQ:

--

Still playing "catch-up" for our supporters, in the month of June last year we heard from:

Monthly contributor Benton Bonney, W4PE of Orlando; Joseph Bartzi, Jr., KC8DKF of Columbus, OH; mnthly contributor Frank Hemko of Harrods Creek KY; te Hualapai (Walla-pie) ARC of Kingman, AZ; monthly contributor William Walters, WA2IBM, of San Jose; monthly contributor Scott Hensley of the Area Communications Team, also in San Jose and an "Aloha" from Corky Kirk, Jr., W6ORS of Hilo, HI.

Thank you to everyone, and we promise to do our best to continue to earn your care and support. A reminder that Newsline is a 501c 3 California non-profit corporation. FCC regulations prohibit us from telling you exactly how to support us, but that information is on our website at www.arnewsline.org. That address will be repeated at the end of the newscast. I'm Andy Jarema, N6TCQ.

--

Thank you Andy. And now, Amateur Radio Newsline report number 1386 with a release date of Friday, March 5th, 2004 follows in 5-4-3-2-1.

The following is a Q-S-T.

Help from down-under in the fight to save Amsat Oscar 40 and lots more on the fight to stop B-P-L. Find out the details on Amateur Radio Newsline report number 1386 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: HELP FROM DOWN-UNDER IN REVIVING AO-40

The AMSAT Oscar 40 ham radio satellite is still missing in action, but more international help in bringing it back to life is coming almost every day. The latest is from down-under as Brett Dawson, VK2CBD and the team of Australia's Parkes Observatory lend their support to AMSAT Germany in the recovery effort. Q-News Trevor Teague, VK4BAT, reports:

A 4 MHz wide spectrum with centre frequency of 1097 MHz was scanned with high level technique in order to find the LO frequency of the AO-40 L1 receiver. The fact that nothing was heard of the L1 receiver's LO does not lead to the conclusion that AO-40 is completely dead. The receivers of Parkes are not really fitted for frequencies below 1.25 GHz, and naturally one does not know how good the L1 receiver's LO is shielded or how much of the signal would go through the antenna to the outside world.

As previously reported, the main battery pack that powers AO 40 is believed to have short circuited keeping the auxiliary battery from powering the bird. As this newscast goes to air the rescue effort continuing. (Q-News)

**

ENFORCEMENT: FCC SEEKING INFORMATION ON ALLEGED FELON HAMS

Back here in the United States, our FCC wants to know if several people on a list it has are felons convicted of an array of very serious crimes. The agency's Daryl Duckworth, N-N-Zero-W, explains:

--

Duckworth: Seven inquiry letters were sent to individuals thought to be licensees who are incarcerated on felony convictions listed on sex offender registration lists or (who) recently served prison sentences for felony convictions. In these cases, the names match our license records and preliminary information is that the subject is the same person listed in our database.

These inquiries seek first to establish whether that is the case, and, second, to determine what affect the offense has on the qualifications to retain a Commission license.

This has been Daryl Duckworth, NN0W, reporting.

--

The FCC did not provide names but it did give conviction information and the locations and offenses. The list includes hams believed to have been convicted of offenses ranging from sexual abuse to child molestation and even murder. (FCC, RAIN)

**

RADIO LAW: JUDGE ORDERS TECHNICAL TESTIMONY IN ALLEGED JAMMING CASE

A Wisconsin federal judge has refused to close the courtroom for testimony by employees of Motorola during the trial of a defendant who allegedly tried to jam police and fire communications. on several occasions last year. In denying Motorola's motion, Judge John Shabaz said on February 27th that the right of Rajib Mitra to a fair trial outweighs Motorola's right to protect its trade secrets.

According to the Madison Capital Times, attorneys for Motorola had argued national and local security concerns as reasons that it did not want public disclosure on how its radio equipment was allegedly jammed by Mitra. The government planed to call five Motorola employees to explain how its Smartnet II radio equipment can be disrupted. Motorola claimed this not only exposed its trade secrets but also placed at risk the lives of law enforcement officers that depend on the proper functioning of their radio communications systems.

But assistant U.S. Attorney Tim O'Shea opposed Motorola's motion, as did Mitra's attorney. Christopher Van Wagner argued that removing the public during his client's testimony would prejudice the defendant. Judge Shabaz agreed with the prosecution and defense. He overruled the Motorola request and ordered the employees to testify noting that no one in the public is coming to his court to find the formula to jam radio frequencies. He noted that this kind of technical testimony can be removed from trial transcripts when they are produced.

Mitra's trial was to began on Monday, March 1st. He faces two charges of using a computer to interfere with police communications. If convicted on both counts he faces up to 20 years in prison. (Capital Times)

RESCUE RADIO: EMERGENCY COMM GENERATOR STOLEN

I'm Bill Pasternak, WA6ITF, with a late breaking story. Dateline San Antonio, Texas where, last Saturday night, February 29th, the San Antonio Radio Club had one of its trailer and generator systems stolen.

Paul Guido, N5IUT, reports over the Public Relations remailer that it was a 12.5 Kilowatt Onan unit. The club's biggest and best generator.

A police report has been filed that includes some very good pictures of the trailer with the generator on it. If you have any information on its where-abouts, please contact Paul by e-mail to Pguido2003a@broadwaybank.com or call the San Antonio police.

The San Antonio Radio Club has been a Bexar County, Texas, emergency communication resource since way back in 1919. (N5IUT)

THE BPL FIGHT: THE 11 METER CB ANGLE

Over the past several months we have been hearing about the potential interference to Amateur Radio that's expected if the FCC proceeds with the rollout of Broadband over Powerline Internet access. But ham radio is not the only service in the 2 through 80 MHz spectrum where B-P-L will operate. Shortwave broadcasters are concerned that their audiences will disappear if they cannot be heard over B-P-L generated noise. Also, a number of emergency communications networks have told the FCC that their vital communications will negatively impacted as well.

The one service that nobody has talked about is 11 meter Class D CB radio. An unlicensed service at 27 MHz with millions of radios crammed into 40 overcrowded channels with many operators running far more power than legally allowed. This week, Amateur Radio Newsline's Mark Abramowicz, NT3V, looks at CB, B-P-L and the collision between the two that may not be to far away.

--

If those who want to bring us Broadband Over Powerline thought amateur radio operators were going to be a nuisance to their plans, they may have an even bigger headache on the horizon. Citizens Band radio operators could prove to be the biggest threat to B-P-L.

The FCC defines CB as a private radio service that doesn't require users to have a license. It hasn't for years. The FCC pretty much gave up regulating the spectrum. It asks users to enjoy their radios but to stay within the five-watt power limit of most of the radios.

But since the FCC gave up trying to keep track of those operating on 27 Mhz, problems have mushroomed. A class of CB operator has emerged who likes to use high-power amplifiers to talk with people several states away.

How powerful? If you check out some of the CB websites, you'll find amplifiers being sold that push the envelope well beyond the legal limit - say 500 watts, 1,000 watts, even 5,000 watts and higher.

Many contemporary electronic appliances, because of poor RF shielding, are susceptible to interference caused by overmodulated CB signals.

The FCC could find itself in a real quandry if the B-P-L industry demands help in going after those who push the limit and disrupt their systems. Imagine the complaints.

Because the FCC can't go to a database to help it find abusers or offenders, it's going to be a difficult if not impossible - task to track these illegal operators.

Will the industry end up funding the FCC's enforcement effort? That would be unprecedented.

Let's be clear: Not all CB operators are outlaws.

Many use their 11 meter radios for personal communications on trips, on hikes, on fishing expeditions. And, yes, the truckers are still big users of the spectrum.

But if you search the worldwide web, you will find CB sites with postings from folks who boast of their radio exploits and their amplifiers and contests.

The websites, of course, take no responsibility for the information or material posted in forums or message boards. They describe them as strictly for entertainment or educational purposes.

Some education the B-P-L industry is sure to get; perhaps a crash or will that be clash course in CB radio.

For now, we'll have to watch and wait.

CBers say they're watching, too. And some of them are vowing no one will stop them from operating as they please.

Stay tuned. For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia

--

To get an idea as to the power that some of the highly illegal competition grade C-B stations run, take your web browser to www.bigradios.com and follow the numerous links from there. (ARNewsline(tm))

**

THE BPL FIGHT: CINCINNATI WATCH OUT

Meantime, Cincinnati Ohio may be among the first to have Broadband over Powerlines across the entire area. This, as a division of Cinergy Corporation announces plans to offer high-speed Internet service over its power lines.

According a March 2nd release, Cinergy Broadband is pairing with the Maryland based Current Communications Group to offer the service in parts of Cincinnati this year. Plans also call for an expansion into Kentucky and Indiana as the regional system grows.

Cinergy says that it hopes to initially market the service to 55,000 of its 1.5 million customers. A second venture will bring the technology to smaller municipal and cooperatively owned power companies, covering 24 million customers across the United States. The companies are committing more than $70 million to the effort. (ZD Net via Media Network)

**

ENFORCEMENT: CONGRESSIONAL SUBCOMMITTEE RECOMMENDS HIGHER FINES FOR INDECENCY

A congressional subcommittee has acted to substantially increase the fines assessed broadcasters who break indecency rules. Some legislators also say that repeat offenders should lose their licenses.

FCC officials have maintained for years that the current maximum fine of $27,500 is too small to serve as a deterrent for large broadcasters who view the fines as a cost of doing business. Now, under a bill recently passed by the House Internet and Telecommunications subcommittee, monetary forfeitures issued by the FCC would be increased by a factor of ten to $275,000 per violation. The cap on the fines would go to a maximum of $3 million.

There is yet another possibility being floated among legislators and one that could come up when and if the bill hits the House floor. That would be to hold performers and others appearing in the electronic media directly responsible for their own words, much the same way as is done in other radio services including ham radio.

But one law maker has cautioned to enlarge the scope of the proposed legislation to far. Representative Fred Upton cautioned that lawmakers should be careful not to expand the bill to the point where it might run afoul of free-speech rights guaranteed by the Constitution. If that happens, Upton says that it could very well buckle under its own weight. (Published news reports)

**

RADIO LAW: FCC SAYS IT TIME FOR LOW POWER BROADCAST RADIO

The FCC says that Congress should lift the restrictions it has placed on the introduction of low power FM broadcast stations. Amateur

Radio Newsline's Bruce Tennant, K6PZW, is here with the rest of the story:

--

In a February 20th statement, the FCC said that its inquiry shows that low power FM stations serving highly specific audiences in small areas do not interfere with the operations of large broadcasters. Also, that they will not keep audiences from hearing the higher power commercial stations as the industry claims.

When the FCC first suggested creating the low power or community radio option. commercial broadcasters and public radio stations complained. The argued that low power stations would interfere with reception of their signals Congress responded by setting what amounted to an R-F no-man's land between the low power stations and existing broadcasters. This severely limited the number of tiny stations that the Commission could license.

Lawmakers also told the FCC to study the potential for interference. The agency spent several years doing just that. It has now concluded that stations running between 10 and 100 watts pose little risk to commercial stations whose power levels can be upward of 100,000 watts effective radiated.

Currently, there are about 300 low powered F-M stations on the air. Most are licensed to churches, school districts, youth organizations, highway departments, environmentalists and the like. By comparison, the nation's largest commercial broadcast radio chain, Clear Channel Communications owns 1,200 stations so far.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

A spokesman for the National Association of Broadcasters termed the FCC report as flawed. (FCC)

**

ON THE AIR: WYOMING STATION DX TEST MARCH 14

Meantime, a full power radio station is in the news and its a good news for hams and S-W-L's who like listening for rare ones on the A-M band. On Sunday, March 14th, radio station KEVA, 1240 kilohertz in Evanston, Wyoming will conduct a D-X test to find out how far its signal can be heard.

According to Lynn Holman reporting over the Broadcast Employees remailer, the test will take place from 12:00 - 1 a.m. Mountain Standard Time and will consist of numerous Morse code I-D's emanating from a C-D created by Doug Smith, W9WI.

For a conformation card please send your reception reports with return postage to Michael Richard, KEVA-AM, P.O. Box 190, Evanston, Wyoming. The zipcode is 82931. (B.E.A.N.)

**

CONFERENCES: EASTERN VHF-UHF IN CT. IN APRIL

Turning to ham radio meetings of note, the 30th annual Eastern VHF UHF Conference will take place next month, April 16th through the 18th at the Radisson Hotel in Enfield Connecticut. Among the program to be presented will be a special update on the "Status of VHF UHF Contesting & Awards Programs" will be Dan Henderson, N1ND of the ARRL. Also on hand will be Gerry Rodski, K3MKZ of SSB Electronic USA to manage the Preamp Noise Figure Measurement workshop and Chris Fagas, WB2VVV to oversee the antenna gain measurement range.

The conference is sponsored by the Eastern VHF UHF Society and the North East Weak Signal Groups. More information is available from Conference Chairman and Proceedings Editor Bruce Wood, N2LIV. E-mail him bdwood@erols.com or visit http://newsvhf.com on the World-Wide-Web. (VHF Reflector)

**

CONFRENCES: SVHFS IN GEORGIA IN APRIL

And the 8th Annual Southeastern VHF Society Conference takes place in Marietta, Georgia on April 23 and 24th. Marietta is not far from, Atlanta and this years program highlights include sessions on pre-amp noise figure and gain measurement, antenna gain measurements, a back scratcher antenna competition and judging for the Mini-Circuits Annual Award for Design Achievement. Also expect a flea market, manufacturer exhibits, the annual auction, and card checking for VUCC. For more information on this one please take your web browser to www.svhfs.org (VHF Reflector)

CHANGING OF THE GUARD: BAND LEADER ALVINO REY, W6UK - S.K.

Ham radio's changing of the guard continues. This with the sad news that Alvino Rey, W-6-U-K, has passed away.

Ray was 95 when he became a Silent Key from pneumonia in Sandy, Utah on Tuesday, February 24th. Best known as a swing-band leader of the '30s and '40s he was also an inventor and tinkerer who pioneered development of the pedal steel guitar. This instrument, and his ability to make it sound like it was talking became his musical trademark.

Born Alvin McBurney, in California he grew up in Cleveland Ohio. After beginning his music career in New York he changed his name to Rey in 1929 to capitalize on the then popular Latin music craze. Rey and his orchestra gained national fame with the 1942 hit, "Deep in the Heart of Texas." Nearly 25 years later, Rey was again in the national spotlight when he was featured for several seasons on ABC Television's "The King Family Show."

Ham radio wise, Ray loved to operate all modes, and, according to posts on the V-H-F reflector, was particularly fond of 6 meters. He was also active on all of the the high frequency bands over his many years in the hobby. (K6LAE, published news reports)

**

WORLDBEAT - USA: BIG ANTI-PIRACY WIN

A federal judge in San Francisco has ruled that a software program that copies Digital Video Discs infringes on the copyrights of Hollywood studios. Judge Susan Illston ruled that software made by 321 Studios of Chesterfield, Missouri violates the 1998 Digital Millennium Copyright Act. This law prohibits the circumvention of anti-piracy measures such as the Content Scramble System protecting movies on DVDs. Judge Illston ordered the company to stop making or distributing such software within seven days of her February 20th order. (News reports)

**

WORLDBEAT - BELGIUM: HACKER GAL ARRESTED

Meantime, a Belgian computer hacker who has made an international name for herself as a woman in a male-dominated activity is facing criminal charges. Belgian police have arrested the 19-year-old technology student, confiscated her five computers and shut down her Web site.

A Belgian newspaper says that the woman, identified only by her nickname, Gigabyte was charged with computer data sabotage. Police tell the paper she was preparing to publish new viruses on her Website when she was taken into custody. If convicted, Gigabyte faces up to three years in prison and 127-thousand dollars in fines. (Computing)

**

WORLDBEAT - UK: IOTA IN OCTOBER

And while its a long ways off, the dates of the Radio Society of Great Britain's International High Frequency and Islands on the Air Convention has just been announced. This year, the gathering will take place the weekend of Friday October 22nd to Sunday the 24th. Further announcements as to venue and the program will follow later on www.rsgb.org and the GB2RS news service from the U-K. (RSGB)

**

NEW HAM PRODUCTS: THE JWM 1152 PHASE LOCKED OSCILLATOR

Looking at products of interest to ham radio experimenters, word that JWM Engineering Group has announced availability of a new phase locked oscillator. One designed to improve frequency control to microwave receivers and transmitters using crystal oscillator local oscillator chains.

According to Jerry Mulchin, N7EME, President of the JWM Engineering Group, the Model 1152 eliminates the frequency uncertainty of most microwave transverter systems. Mulchin adds that Precise frequency control and stability eliminates at least one variable in establishing successful and enjoyable microwave communications. More information is on the web at http://jwmeng.com. (JWM Engineering Group)

**

CONTESTS: WB6ACU AND K9EID ON FROM W1AW

On the radiosport page, the ARRL phone contest on March 6th and 7th will have had some well known hams operating from the League's W1AW flagship station this year. According to a note from Bob Heil, K9EID, he and famed rock guitarist Joe Walsh, WB6ACU of the Eagles will be on the air from League headquarters during contest. A special picture QSL will be sent to those who work Joe or Bob. QSL to their respective call directory addresses. (K9EID)

**

DX

In DX, PA5M has been active as 9U5M from Burundi since the 17th of February and will stay in the country until the 17th of March. He operates in his spare time, typically after 1600 UTC, on 10 to 40 meters CW and SSB.

And W7EJ is in Morocco until the end of March. He plans to be active as CN2R in the CQ 160-Meter SSB, ARRL DX SSB and CQ WPX SSB contests.

Also, DJ4SO is active portable V-51 from Namibia through the 15th. He plans to operate on 160 to 6 meters mainly CW, RTTY and PSK 31 with some SSB.

Lastly, ZS6Y reports he is active with the special callsign ZS10RSA until mid-May. This, to celebrate 10 years of democracy in that nation. For all of these operations, QSL as directed on the air.

(This weeks DX news courtesy of GB2RS)

THAT FINAL ITEM: THE ORIGIN OF ELECTRONIC SPAM

And finally this week, a brief lesson on something we dread every time we check our e-mail. You know what it is. Unwanted junk e-mail that people have come to call Spam. Ever wonder why? Here's Bill Pasternak, WA6ITF, with some details that probably very few people know:

--

We all know that Spam is the trade name of a canned meat product. At least I suspect that most of you do. But have you ever wondered where the phrase "spam" in relation to unsolicited junk e-mail came from. Well, blame it on the computer nerds who were fans of one of the worlds greatest comedy ensembles.

It seems that the term began being applied to junk electronic mail in the early 1990's by computer geeks. It was based on a 1970 Monty Python skit in which an exasperated restaurant customer is urged to order the meat until she screams: ''Stop it already. I don't want any Spam!''

And that was it. And now you do know the rest of the story.

For the Amateur Radio Newsline. I'm Bill Pasternak, WA6ITF, in the City of Angels.

--

To which Ill add the rhetorical question: How many of us open our e-mail boxes each day and want yell the same thing? (Tnx to Q-News, CGC, others who sent this item along.)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Davis, W2JKD, saying 73 and we thank you for listening. Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

... and what would you be donating in turn to the Amateur Radio
Association of the Southern Tier (ARAST)? You know... if you folks
down there on the Island can't support your own club, then perhaps you
should just disband and donate your club equipment to Greenhorn hams
who need starter equipment...

Hey gang...

I have a question I'm hoping someone can answer...

About a year back, I dropped a few queries in here regarding whether I should get the IC-T7H or the IC-W32 2m HT and whether I should use a glass mount antenna or what. Thank you to everyone who responded to those questions. (Incidentally, I decided I'd love to mount the dual antenna directly to my Jeep - thanks!)

Well, that was then. Since then, my wife and I have fallen on hard times... I'm not complaining, mind you, I'm just saying it's tough to scrape the $300-400 together... I can barely come up with $10, you know?

Meanwhile, it kills me that I can't get on the air at all. (I know you folks can understand how I've been feeling; being off the air for several years!)

So, here's my question: How could I get on the air either cost-free, or very nearly (say under $50)?

Is it even possible?

I haven't come up with anything, so I turn to you. Thank you in advance for any and all advice/suggestions you may have.

You could always use Echolink. If you don't have a microphone for your computer, you can get one for much less than $50. Sure, you're not using a radio, but at least you could talk to other hams.

Check out your local ham clubs, become a member. See if anyone has any
equipment to sell or lend.

C.J. I am in San Diego and suggest the following for Under $50 2m radios and antennas:
Go to HRO and check the bulletin Board
HRO San Diego -- URL:
http://www.hamradio.com/

Read all the San Diego ARC Club Newsletter classifieds -- see clubs at URL:
http://ac6v.com/sandiego.htm
See PARC news letter -- there is a Yaesu 2M rig there for $45
PARC URL: http://www.palomararc.org/Scope/jan04scope.pdf

Go to the San Diego Swap meets -- see URL;
http://ac6v.com/sdswap.htm#sdswap

Go to the SD Club auctions see URL:
http://ac6v.com/sdswap.htm#AUC

Listen to SD Swap nets on the air (borrow a rig or use a scanner) -- see URL:
http://ac6v.com/sdswap.htm#NETS

Build your own antenna -- see URL:
http://ac6v.com/antprojects.htm#2M

Check E-Bay for under $50 radios -- have seen lots there
http://ac6v.com/antprojects.htm#2M

```

On your budget, I'd forget about 440 mhz, and just concentrate on 2 meters. There's plenty of activity there.

ADI has a 2 meter 5-watt class handheld for $99 street price -- Icom has a 2 meter 6 watt hand held, the IC-T2H Sport, for $89. Check them out at the web site for AES or HRO or whomever. I personally use the Icom, and it's a fine little rig. You'll need to buy some batteries for it, tho'.

For an antenna that's better than the rubber duckie jobs you get on handhelds, or what you would need with a mobile, look at homebrewing something. 2-meter dipoles or verticals are easily homebrewable.

For $50 or less on a rig, do a search on ebay, in the ham portion, for 2 meter handhelds or mobiles.

Go to:
http://electronics.listings.ebay.com/Radios-CB-Ham-Shortwave_Ham-Radio_W0QQfromZR0QQlotrZ1QQsacategoryZ4670QQsocmdZListingItemListQQsocolumnlayoutZ3

Try to get something with at least 5 watts out. The milli-watt rigs
are next to useless unless you're awfully close to a repeater.

Look around the household -- round up the unwanted items -- old clothes,
dishes, etc.

Hold a garage sale --on several occasions we raised over $100 selling
unused, old stuff.
Enough for my new HT

It is amazing the things that you can sell at a garage sale. I put out a
bunch of stuff that I was certain wouldn't sell and that I'd have to end up
just tossing. It was the first stuff to sell!!

Ha tis true.

Our everyday knives, spoons, and forks were shop-worn for sure after 15 years of use.
Offered them at the olde garage sale.

They were the first to go -- buyer sed -- ah perfect for camping and picnics -- instead of the plastic ones.

We priced em high, buyer bid low. We agreed on the price we wanted in the first place.

"One persons junk is another's treasure."

"Raise money the old fashioned way - Earn It"

All this OT as a way to raise money for a radio.

Items are mostly being disposed of by our groups "widow's committee" helping SK estates. Generally, no extra charge for packing and taking to PO/UPS. Large/heavy items requiring special handling taken to a local packing agent at no charge but shipping is responsibilty of buyer. Free delivery in north/central Florida between Ocala and St.Pete/Orlando when one of our group is making the trip. If interested, make a reasonable offer.

Some items are personal equipment of myself or other group members.

Digital pictures available on all items (numbers in parenthesis refer to photo number)

Shortly after I bought my Icom IC-T2H handheld some hams told me that Icom
stands for 'I Can Only Monitor'

I am inclinded to agree. I have had my handheld for less than a year and
the battery has to be held on with a rubber band and the PL chip no longer
encodes PL tones.

So can the rumor be tue and I.C.O.M actually mean "I Can Only Monitor"?

Steven

I have 2 Icom IC-V8000 rigs, one in my vehicle and the other in the shack,
no problem with either after almost a full years worth of use. Other Icom
rigs I have had in the past worked without problems too. Alinco was the only
VHF/UHF rig to give me any trouble and that was quickly diagnosed and
repaired.
I suspect you probably got a defective unit.

It turns out that the microphone had gone bad. My dealer gave me a new microphone and it's been working great ever since. Once I figured out it would transmit DTMF tones but not when I pushed the PTT, I figured it was the microphone. :)

Please do not post binaries to a non-binary group
(us.military.army). If you must post a binary, post it
somewhere like alt.binaries.pictures.military and post a
pointer to it in the non-binary group or a reference URL to
the picture if found on the web.

Snark

Yea its a bullshOt time travel unit (Actually a Army reciever) that some guy
claims he can move through time with.......Isnt it obvious?

http://www.physicsforums.com/archive/topic/5396-1.html

About halfway down the page you will find it mentioned

No its not a nuke....I used to build nukes for the Military...

Well this is a BIG SORRY to all those who helped me out, oh wait that was
no-one. only post to 5 groups, ok fine but 2 over your lomit is not some
sort of crime.

ive only posted this question once, its not like i do this everyday.
basically if you have nothing productive to say then dont say anything.

Do what you want to do in us.military.army as these Netcopps in here don't
follow the charter either yet they demand you do.  So don't let it bother
you one bit.  There are no rules in us.military.army

Not sorry enough. Two rude mistakes in a single posting isn't likely to get you any help.

I have a Hallicrafters S-107 that the tuning dial stopped working on. It looked as though the string that runs through the pully system was loose. I tried to tighten it by taking another turn around a pully, but a turn fell off another pully when I did that. Bad led to worse and eventually the end with the loop in it came out of the big pully, the one that the spring end of the string is also attached to.

Can someone please tell me if there is a standard procedure for fixing this? The trial and error method doesn't seem to be working out.

Thanks very much,
Mark

Gets dicey -- re stringing a dial -- but Sams Photofact or the service
manual will show the correct way.

See manual vendors at AC6V's site URL:
http://ac6v.com/manuals.htm

Try BAMA - tis free

I seen one on the internet a long time ago. I think the guy used a Kenwood
reciever. You could punch in the freq that you wanted to hear and it would
record upto 30 secs i think. Then play it back for you. I tried to look for
him again through Google, but no luck.
Let me know if you find one, i'm thinking of hooking my IC-706 up to my
webiste for remote use.

This is the greatest box in the whole wide world- see below for more box stuff

Details:
Clearwater
Type GE EDACS - Analog / Some encryption

2 transmitter sites. The main user on this system is the Clearwater Police Department. However, City of Clearwater Public works (waste, water, nursery, gas, etc.) as well as the lifeguards can also be heard. The following are the 11 frequencies used. It is important that you enter them into your Trunktracker in the exact order shown, and that frequency 1 (LCN 1) is entered into the first channel of a bank. Also, your Trunktracker scanner must be capable of decoding EDACS systems, such as the Uniden 245XLT or the BC780XLT.

--------------------------------------------------------------------------------
The St. Petersburg system is now actually the south cell of the
```

Pinellas County system. I am still trying to figure out how the 2 are patched together and what talkgroups will show up where. So, I am adding new talkgroups that are heard, and confirming old ones as still being active. The system should be totally typeII now, but I am keeping the old fleetmap on file until I am 100% sure.

Talkgroup ID	Use
5312	Sanitation
5600	Parks Control
5024	Water Dept.
6272	Traffic base
6560	Bayfront Control
6624	

St Pete PD

19680	Dist 1
19712	Dist 2
19744	Dist 3
19777	Delta Channel
19872	Event 1

DO NOT USE THIS INFORMATION... IT IS OUTDATED. IT IS PROVIDED FOR HISTORICAL PURPOSES ONLY.

Fleetmap:
b0=S0
b1=S0
b2=S0
b3=S3
b4=S12
b5=S12
b6=S0
b7=S0

Fire Department - Remember, all FD calls in Pinellas County are dispatched on 1-A on the county system. The 2-fleet is used for talk-around only.

This system is type I. Note that S12 uses 2 blocks. The fleetmap I've given above is just a rough estimate, but it seems to work fine for most talkgroups. Most of the address I've heard being dispatched on this system are in Tampa, so I labeled it as a Tampa system. There is a lot of phone patch activity on this system as well. Unlike the 900 MHz SMR, I get very good reception for both the data channel and the audio channels here in north St. Pete.

Notes:

In the event of a tactical (swat) team call-out, they will operate on channel 3.
Name and tag checks will move to channel 7.

Channel 16 is only programmed into handheld radios. As a result, the range is very limited. It is the most widely used simplex channel (not all officers have channels 9-12).

Air service usually operate on the channel for the area they are flying over.
They may change to channel 16 to talk to ground units. Their callsign is usually 452, 453 or 454.

DUI units are citywide, but are dispatched on channel 1.
Their callsigns are in the 670 range.

Uh pardon me? Are you just being an asshole or just trying to be cute...
which is it? I've built enough of my own electronic and ham equipment in
the past 40 years to put most hams to shame...

In other words, don't be an asshole when someone asks if there is a common
problem with a particular piece of equipment they should know about.

73... NOT.

Amateur Radio Newsline™ Report 1380 – January 23, 2004

CLOSED CIRCUIT ADVISORY

This is Andy Jarema, N6TCQ, Newsline Support Fund Administrator. We haven't asked for quite some time, but we need contributions TODAY. If you value this service, please help.

We're here to serve you for as long as you want us. Your response over the next several weeks will provide that answer.

The address for the Amateur Radio Newsline is Post Office Box 660937, Arcadia California, 91066.

Looking forward to hearing from you REALLY soon, I'm Andy Jarema, N6TCQ.

**

Amateur Radio Newsline report number 1380 with a release date of Friday, January 23, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The ARRL says that it will petition the FCC for a code free entry level license with high frequency phone privileges and Amateur Radio Neewsline announces the Roy Neal, K6DUE, Amateur Radio Mentoring Project. These stories and more coming your way on Amateur Radio Newsline report number 1380 coming your way right now.

(Billboard Cart Here)

HAM RADIO POLITICS: A NEW DIRECTION

Topping the news this week -- honoring one of our own. Enlisting an army of volunteers to make us all a little bit better -- and doing it in the name of the late Roy Neal, K6DUE. But first -- the biggest organization of Amateur Radio operators in the world finally takes a position on the code versus no-code issue. The ARRL is asking the FCC in a petition for rulemaking to create a no code entry level H-F license for anyone who can successfully pass a written exam of a mere 25 questions. If the FCC accepts the ARRL idea, it would keep the more stringent requirements for the Amateur Extra Class license, including their ability to send and receive Morse code. Amateur Radio Newsline’s David Black, KB4KCH, takes a look at the details of what the ARRL is asking the FCC to do:

--

Code free access to ham radio's high frequency bands ... it's part of what could change amateur radio's complexion forever. And it could become reality. The ARRL says it will ask the FCC to make sweeping changes to the United States amateur radio service. Perhaps the biggest change of all: Creating a new entry level ham radio license that grants access to high frequencies without requiring any Morse code proficiency.

But that's not all. The League also proposes consolidating all amateur radio licenses into three classes: Novice, as it's being called for now, General and the highest level, Extra. And only the Extra class license would require Morse code proficiency--of 5 words per minute. The new Novice license would require a 25-question written test and would offer limited HF, Morse code, data and phone and image privileges on 80, 40, 15 and 10 meters. Novices would also have VHF and UHF privileges, including access to 6 meters and 2 meters. Their power levels would be restricted to 100 watts on 80, 40 and 15 meters, and to 50 watts on 10 meters and higher.

The middle amateur radio license would continue to be the General, but it would include all current Technician, Tech Plus and present General license holders. This license would not require a Morse code test. Under this proposal, if you are a current Technician or Technician Plus, you would automatically obtain General class privileges with no additional testing. The current General examination would remain unchanged for new applicants.

The third license class, the Extra, would involve the fewest changes. Under the League proposal, hams with Advanced class licenses would essentially automatically become Extra class because of similarities in the technical proficiency required for both levels. New applicants for the Extra class license would have to pass a 5 word-per-minute code test--the written test would stay as is. If you're currently a Novice, Tech Plus or General license holder, you would receive a lifetime 5 word-per-minute credit.

The proposed changes got the blessing of ARRL's Board of Directors January 16th. The proposals are the creation of a League Executive Committee acting at the Board's direction. The new structure suggestions come as a result to changes in international radio regulations that are part of the World Radiocommunication Conference 2003. At the same time, the FCC has been wanting to streamline the amateur radio licensing structure which it began more than five years ago.

How do radio amateurs feel about the changes? Reaction is mixed:

--
Janice Rock AF4LT - Audio Only Report: Please listen to audio version of newscast.
--

Janice Rock, AF4LT, sees benefits and drawbacks:

--
Janice Rock AF4LT - Audio Only Report: Please listen to audio version of newscast.
--

Supporters say the new structure offers a true entry level license with HF privileges that should boost growth in the amateur radio service. While some hams may claim that taking away code for HF access damages amateur radio, other hams dispute that. Bill Levey, WA4FAT:

--
Bill Levey, WA4FAT - Audio Only Report: Please listen to audio version of newscast.
--

Supporters say the changes will help amateur radio by allowing new Novices to participate in emergency nets on HF sideband.   The impact of this proposal on amateur radio's long term future has Janice Rock concerned for another reason:

--
Janice Rock AF4LT - Audio Only Report: Please listen to audio version of newscast.
--

League Executive Vice President David Sumner K1ZZ says the Novice class license could wind up getting a new name, more appropriate for the times -- this, as amateur radio faces what could be one of the biggest changes in its history.

From Birmingham, Alabama, I’m David Black, KB4KCH for the Amateur Radio Newsline.

--

More is in cyberspace at the League’s website. You will find it at www.arrl.org (ARRL, ARNewsline(tm))

**

RESCUE RADIO: NYC ARES ACTIVATES FOR COLD WEATHER

The New York City District Amateur Radio Emergency Service was called into action last Wednesday evening, January 14 th. This, after the American Red Cross of Greater New York contacted Mike Lisenco N2YBB. Lisenco is the District Emergency Coordinator for ARES and the message was clear: Call together the members of ARES to provide emergency communications between the warming centers being established in the five boroughs and Red Cross headquarters in Manhattan.

--

Lisenco: “Once I received the phone call from the coordinator of disaster volunteers at the Red Cross of greater New York, the first thing that I did was to call the five EC’s we have here in New York City. Each borough which constitutes a county has its own EC. In turn they called their people looking staff the shelters.”

--

By the next morning, New York City District ARES Emergency Coordinators had more than a dozen Amateur Radio operators on standby awaiting the activation. Friday evening they went into action after Mayor Bloomberg announced the shelter openings. The ARES radio operators manned their posts throughout the operation, which lasted the better part of a day during some of the most frigid weather ever recorded in the Big Apple. The hams finally stood down on Saturday afternoon.

This is not the first time that New York City District ARES has provided critical communications for emergencies. They were active with the oil barge explosion at Port Mobile on Staten Island, the Northeast Blackout in August 2003 and did heroic work following the terrorist attacks of September 11, 2001. (ARNewsline(tm), NYC ARES)

**

Break 1

Stay tuned for the details on one of amateur radios most ambitious mentoring projects. It's coming up later in the newscast, but first From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the Peace River Repeater Associations systems serving Punta Gorda Florida.

(5 sec pause here)

**

ANNOUNCING THE ROY NEAL, K6DUE, AMATEUR RADIO MENTORING PROJECT

Amateur Radio Newsline is paying tribute its late vice president, Roy Neal, K6DUE, by naming an ongoing mentoring program in his honor. Roy became a silent key last August after surgery. He was 82.

The Roy Neal, K6DUE, Amateur Radio Mentoring Project is designed to pair new hams -- often called "newbies" -- with veteran amateurs. This, in the hope that some of the established hams' operator skills can be passed down to new generations.

--

Pasternak: "ere is a long tradition of mentoring, often called "elmering," in Amateur Radio. No one knows the origin of the term, but the first teacher might well have been named "Elmer." My mentor was a guy named Charlie Zussman. Back in the 1950's he was WA2AKX. Today he's WE2R. And his helping me become a ham has lead to a friendship that has lasted a lifetime. What he taught me was that tradition is an important part of the hobby.

--

That's Bill Pasternak, WA6ITF, who has produced these newscasts since 1977. He and the Newsline Board of Directors came up with the idea for this project. Bill says that ham radio has become a tremendously complex arena and new hams often don't know where to turn for help:

--

Pasternak: “We have licensed hams who are truly experts in numerous fields ranging from bouncing radio signals off the moon, to writing complicated software which enables new forms of two-way communication. We want to take advantage of that knowledge base to help newcommers.”

--

While Amateur Radio includes world-class experts in a number of specialties, there are literally thousands of hams who have operating skills also worthy of passing on. For example, contesting is very popular, yet it is a tough nut to crack for a beginner.

--

Pasternak: “Contesting is intimidating. I know. I’m just getting started. Good contest operators often are able to contact four stations per minute for hours at a time. The great ones do even better than that. How they are able to do that is a skill that should be passed on to newcommers.”

--

Two large pools of Amateurs are needed to make this mentoring project work. First, there must be a group of volunteers who have a skill and are willing to share their time. The second group is made up of the large number of beginners who want to learn.

One of the nations top mentors, kit building expert Joe Eisenberg, K0NEB, has agreed to help set up databases and to begin the process of matching mentors with beginners. All we need to know is if you need assistance or if you are able to mentor others. We also need your name, call letters, address with zipcode, phone number, e-mail and when its best call.

The special e-mail address to register is mentor@arnewsline.org.

Mentors might be matched by zipcode – and be in the same town, or they might be half-way around the world from each other and communicate by e-mail. Either way I think we can make it work.

--

Pasternak: “The project’s namesake, Roy Neal, K6DUE, was himself a mentor and not only in ham radio. I know this first hand because he is the one who taught me to become a better writer and producer.

More important: Those of us who knew Roy, also know that helping others was a very important part of his life. As such. we feel that the least that we here at Amateur Radio Newsline can do is keep his memory alive with this project.”

--

Again, that e-mail address to register for the Roy Neal, K6DUE, Amateur Radio Mentoring Project is mentor@arnewsline.org More information is on our website at www.arnewsline.org

And Roy, old buddy, this one is for you! (ARNewsline(tm), W6RCL)

**

THE BPL FIGHT: NORTH CAROLINA HAMS MEET WITH POWER PROVIDERS

Slow but steady progress in dealing with the imminent release of Broadband over Poweerlines in North Carolina. Gary Pearce, KN4AQ, is here with more:

--

Progress Energy fulfilled their promise to North Carolina Amateur Radio operators and invited several Raleigh area hams to observe their new Phase II BPL trial in a rural subdivision south of the city on January 15th.

BPL – Broadband over Power Lines – is a system for delivering high speed Internet through neighborhoods and into homes and businesses via the power lines. The technology places radio frequency signals on the power lines in parts of the spectrum between 2 and 80 MHz. Those signals radiate to some extent, and can cause interference to a receiver in the vicinity of the power lines. Naturally this has become cause for great concern among hams worldwide.

In Raleigh, three ham radio operators met with engineers for both Progress Energy and Amperion, the equipment manufacturer. Two of the Progress Energy engineers were also hams.

The BPL trial consisted of a half-mile of overhead feeder along a highway, and a few dozen homes passed by buried power lines.   A “repeater” amplified the signal about every other block.

We were particularly interested in the spectrum used. We learned that each run of BPL, from repeater to repeater, uses two blocks of spectrum, 2.5 and 3.5 MHz wide. At each repeater, a different block of spectrum is required.

The overhead feeder segment in this trial used spectrum blocks around 25 and 29 MHz. We listened with mobile equipment driving on the road adjacent to the power line, and received S-9 signals in the immediate vicinity of the line that sounded like this when tuning across the 10 meter band:

--
[audio clip of BPL signal]
--

The signal fell off quickly when driving away from the line, but a ham at a home station almost a mile away heard the 10-meter BPL signal about S-6 using an 80-meter dipole antenna.

Amperion says a Network Operation Center can move any repeater to another block of spectrum, or notch part of a block by remote control, to eliminate interference, but they were unable to demonstrate that for our test.

Even with that flexibility, fitting 3.5 MHz wide blocks of energy in between ham bands would be a delicate jigsaw puzzle. That much “empty” spectrum exists only between the 30, 20 and 17-meter bands, and it’s empty only from the perspective of Amateur Radio.

Skip could completely upset the equation. BPL signals, which are similar to very low power QRP Amateur signals, could reflect off the ionosphere and appear hundreds or thousands of miles away. The energy of one isolated trial area might not have much impact, but a mature nationwide system with hundreds or even thousands of installations using the same spectrum blocks could be a very different story.

Yet to come in BPL is a comprehensive report from the NTIA; an FCC Notice of Proposed Rulemaking for changes in Part 15, based on last year’s Notice of Inquiry; and a decision by your local utility about getting involved in BPL.

Reporting for Newsline, this is Gary Pearce KN4AQ in Raleigh, North Carolina

--

The hams at the test included Wake County ARES E-C Tom Brown, N4TAB, Technical Specialist Frank Lynch, W4FAL, and reporter Gary Pearce, KN4AQ.
(ARNewsline(tm))

NAMES IN THE NEWS: K1IGD NAMED NEW QCWA GENERAL MANAGER

Chuck Walbridge, K1IGD is the new General Manager of the Quarter Century Wireless Association. Walbridge is already at work and has set up a new postal address. You now write to QCWA at PO Box 3247, Framingham, Massachusettes, 01705. He can be reached by e-mail to qcwagm@rcn.com (E-Mail)

**

RADIO LAW: CA COMMERCIAL SITE OWNER LOSES A ROUND IN BATTLE OVER ANTENNA FARM

Commercial mobile radio service provider James A. Kay has been dealt a setback by a California state appellate panel. The court has upheld a superior court finding that the antenna farm Kay maintains at his Rancho Palos Verdes home is not exempt from city permit requirements.

Late word is that Kay is continuing his fight with the city. This, even though he obtained permits for two of his 20 antennas with the condition that he remove the others. More is on-line at http://www.dailybreeze.com/content/news/nmpntenna7.html (CGC)

**

HAMFESTS AND CONVENTIONS: GAINSVILLE FL. IN APRIL

Looking ahead in the social calendar we find the Gainesville Hamfest slated for April 24th and 25th at the Leach County Fair Grounds near GAINSVILLE Florida. The event will feature fun, food, prizes, tailgate selling , camping, ham radio testing and lots more. For more information write to GARS, PO Box 140383, Gainesville, Florida 32614, or visit www.gars.net/hamfest on the world wide web. (E-Mail)

**

HAMFESTS AND CONVENTIONS: THE AES SUPERFEST IN APRIL

Molly Schreiber of Amateur Electronic Supply says that now is the time to schedule your organization for a display at the 2004 AES Superfest.

Molly says that the new web pages are up and running. Just go to www.aesham.com, select MENU from the right-hand side bar and click SUPERFEST in the menu listing on the page that appears.

After that all; you need do is click on RADIO CLUB REGISTRATION. After registering your organization, you will receive a conformation E-mail with the confirmation and itinerary.

Molly adds that the deadline for signing up is March 1st. Superfest 2004 is slated for April 2nd and 3rd at the A-E-S location at 5710 W. Good Hope Road in Milwaukee Wisconsin. (AES)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**
HAMVENTION 2004: THE HAMVENTION “SHOPPING CART”

Hamvention 2004 says that it is now accepting VISA, MasterCard, American Express and Discover Cards for tickets, booth spaces and flea market spaces. This, using its brand new on-line “Shopping Cart."

Planners say that this is a simple and secure way to set up your personal Hamvention experience and assures that you can get what you want. And you can do it all without having to ever leave your home.

The Hamvention "Shopping Cart" is located in cyberspace at www.w8bi.org/hamvention/shop.html. When the page loads, click on the green box with the words: "Enter The Shopping Cart" and take a look at what’s being offered over the world-wide-web.

This years Hamvention dates are May 14th, 15th and 16th. The venue is the HARA Arena in the Dayton suburb of Trotwood Ohio. (Hamvention)

**

SYMPOSIUMS: CSVHFS IN JULY IN CANADA

The 38th annual Central States VHF Society Conference will be held July 22nd to the 25th and planners are already seeking presenters of technical talks that will also be published in the conference proceedings.

The deadline for submitting final papers will be May 1st. This years gathering will be held at the Delta Meadowvale Resort and Conference Centre in Mississauga Ontario, Canada not far from Toronto. More information on the event and the need for speakers is available from Bob Morton, VE3BFM. His e-mail is VE3BFM@csvhfs.org (CSVHFS)

**

HAM RADIO IN SPACE: ECHO TEAM REPORTS PROGRESS

AMSAT North America reports that work on the Echo satellite is progressing smoothly. According to the ham radio space agency, an integration and testing team lead by Jim White, WD0E, and Mike Kingery, KE4AZN, was 2003 at SpaceQuest in December. SpaceQuest is in Virginia and during the initial satellite integration session, about 90% of Echo's hardware was successfully tested. Also, most of the telemetry calibration was accomplished. Especially encourage is word that the new experimental L-band receiver and S-band transmitter functioned well during their first tests.

For more information on the progress of this new bird take your web browsder over top see www.amsat.org and take the "Echo Project Info" link. (AMSAT--NA)

**

INTERNATIONAL - CANADA: NEW ONTARIO SM

Radio Amateurs of Canada reports that Robert McKenzie, VE3SJQ, has stepped down as Ontario Section Manager. His replacement is Rose Scholtyssek, VE3RIS. Scholtyssek’s E-mail is rose@igs.net (RAC)

**

DX

In D-X, word that F6FXS will be active as FG/F6FXS from Guadeloupe through the 13th of February. He will operate on 40, 30, 20, 15 and 10 metres on CW only. Look for him between 13.00 and 14.00 and again from 22.00 to 24.00 UTC. Q-S-L as directed on the air.

And GB4BLC, standing for 'Bedworth Lions Club', is being operated by Brian, G8GMU, until the 29th of January to raise awareness of the work of Lions International. (Varios DX sources)

**

THAT FINAL ITEM: THE LIFE AND TIMES OF K2ORS

And finally this week, a new book is in the works about a broadcast legend who also happened to be a ham radio operator. Take a listen:

--

Shep: “Well there I am playing that character deep in the jungle. We have $400,000 of camera equipment that’s being eaten by mosquitoes. They eat Betamax cameras. You don’t know about the tropics. Leaches are coming up the tripods, when a runner comes down the beach. He’s a Chumaro Indian.

He’s running. He’s sweating. He arrives in the clearing. This is exactly what happened.

The Director is standing there. He’s sweating and saying: ‘...damn, we got to get this.’ We kept trying to clean the lens off. It was a tough shoot.

And this Chumaro runner comes up and he’s saying; ‘Message. Message.”
He has a message. The Director looks at it and he hands it to me and the message said -- and I quote: ‘...The Dayton Hamvention called. They want you to speak this spring.’

I said: ‘For cripes sake, how did they know I was in the jungle’
(laughter)”

--

That was the late Gene Shepherd, K2ORS, speaking at the Dayton Hamvention several years ago. Shep as he liked to be called, passed away in 1999. Now, author Eugene Bergmann has set to work writing the definitive book about the ham who invented talk radio. In a recent interview with Amateur Radio Newsline, he told us why:

--

Bergmann: “Well I first started listening to Jean Shepherd way back in ‘56 when I was in college and I think what he had to say and the way he said it affected my thinking for the rest of my life. Soon after he died I realized how important he was to my way of thinking. That he was like an old friend. I got more and more involved in learning more about him and I finally decided that I had to write a book about his art.”

--

In writing his book, Eugene Bergmann wants to make certain that every aspect of Shep’s life and career is accounted for, including his love of ham radio.
And a love it was as in this very rare recording where he accurately predicted

the explosive growth in F-M and repeaters in general and one New York City machine in particular:

--

Shep: “I don’t think you guys who sit around every night like you do recognize the already legandary status of this repeater outside of this area. I just came back from a trip from the Canadian border and all the way down through New England and way up in the Northern part of Maine I worked guys and the one thing that they all talked about was SUR (WA2SUR). And they really was a quality of ‘wow’ in their voice. I think that in another ten years there’s no telling how immense this repeater will be and what a structure it will be. I am very serious when I say this. I think we are in the beginning of a thing here and I think that ultimately 25 years from now people will look back on the early two meter guys like us -- we’re considered early guys now -- with a legendary awe. You know, with a quality of awe, like ‘my god -- they started it all.”

--

That was recorded way back the evening of June 21st 1972 over the then WA2SUR repeater in New York City. K2ORS was right on in his F-M and repeater growth forecast. Bergmann says that’s the kind of he plans to include:

--

Bergmann: “In May of 1968 in one of his broadcasts he said: ‘...I became at the age of ten, totally, maniacally and for life I might point out -- completely skulled out by Amateur Radio.’ So he was quite an enthusiast up to his death in ‘99”

--

Sound intriguing? Well you can find out a lot more about Eugnene Bergann’s book and how you can help to writer it on this weeks RAIN Report. Just go to www.rainreport.com or dial into area code 847-827-7246, sit back and enjoy a quarter hour with Eugene Bergmann and his new book on the legendary Jean Shepherd, K2ORS. (ARNewsline(tm))

Amateur Radio Newsline(tm) Report 1381 - January 30, 2004

Amateur Radio Newsline report number 1381 with a release date of Friday, January 30, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Hams across the nation react to the ARRL restructuring proposal and the first B-P-L law suit involving ham radio is threatened in Austria. These stories and an interview with ARRL President Jim Haynie, W5JBP, highlight this weeks Amateur Radio Newsline report number 1381 coming your way right now!

(Billboard Cart Here)

**

RESTRUCTURING: HAMS REACT TO THE ARRL NO-CODE PROPOSAL

Hams are starting to react to the recent ARRL proposal to restructure the United States Amateur Radio service, and not surprising the comments are as diverse as the community itself. Amateur Radio Newsline’s David Black, KB4KCH, is at our South-East Bureau with this part of the story:

--

If you listen to the ham bands and check out the comments on the qrz.com website, it appears that most amateur radio operators have a somewhat sedate response to the ARRL's restructuring proposal. While some activists make their opposition quite vocal, the majority of comments so far seem to accept the League's initiative, 'though some do express reservations.

"I can live with this" is how some comments go. Others more strongly support the League by saying, "right on, A-double-R-L." The biggest concern most express centers around the ability to monitor the airwaves for rules compliance if explosive growth results. As one operator on 15 meters says, "If we get a million new hams, will the FCC give us 500 more Riley Hollingsworth's to keep them in line?" Hollingsworth handles amateur radio enforcement matters for the Commission.

Some operators say the League's proposal will wind up dumbing down amateur radio. Some even claim to have resigned their ARRL membership, 'though so far, no proof of that has surfaced. Vehement opponents of restructuring may in fact terminate their League memberships, but the number is not expected to be significant.

Restructuring is not a done deal. Announcement of the League's proposal is only the start. The League will formally request that the FCC make a rules change. Once the Commission receives that request, it will be up to the FCC to decide whether or not it will consider the League proposal put it out for public comment. Chances are that it will. Once the proposal is assigned a rule making designation, you will have a chance to make your opinion known.

Comments are likely to come from the general public, the business community and any special interest groups as well as those who hold an FCC assigned call sign.

Stay tuned -- the story's just beginning.

From the South-East Bureau in Birmingham Alabama, I'm David Black, KB4KCH, reporting for the Amateur Radio Newsline.

--

Unless the FCC decides to place the ARRL request on a separate fast-track, you can expect the agency’s first action to be putting it out for initial comment sometime in the next several weeks. (ARNewsline(tm))

**

RESTRUCTURING: THE ARRL ON THE ARRL RESTRUCTURING PROPOSAL

The ARRL is now explaining why it has decided to ask the FCC to restructure the United States Amateur Radio Service, and the words are coming straight from the top.   Amateur Radio Newsline’s Mark Abramowicz, NT3V, caught up with ARRL President Jim Haynie, W5JBP, by phone and got some insight into why the ARRL Board acted as it did :

--

With the American Radio Relay League's imminent filing with the FCC of its proposal for a new, no-code HF entry level license, the debate is certain to heat up.

ARRL President Jim Haynie W5JBP acknowledges the league's proposal will generate some controversy. But he says months of research, surveys and lots of internal debate went into crafting the revival of a Novice-class license.

Yes, Haynie confides, the ARRL's directors and Haynie himself were pressing the flesh - so to speak - for months gathering input from the amateur community. Directors also were conducting informal surveys among ARRL members. And, he says, a professional research company was hired by the league to survey hams about the state of the hobby.

Haynie says the research company's findings were pretty sobering and bolstered the ARRL board's drive for license reform.

"For example, 53 percent, if my memory serves me correct, today of all amateurs now are 55 years or older," Haynie says. "And this is growing at an exponential rate, it's not linear. And this is a very disturbing thought."

He says the results also revealed something the ARRL suspected for some time.

"There's people getting licenses and they're getting involved in what we call, or what I call '2-meter ghettos' and they have no place else to go so they lose interest after about a year or six months or whatever," Haynie explains. "So you've got 200,000 or 300,000 Technician licenses out there who say 'I've tried' and they did and they didn't like it."

Haynie says it became clear one way to recapture the magic of the hobby lay in the experiences many long-time hams had when they first entered amateur radio.

"We went back and thought about, okay, how did it used to work and what was successful about it? And the old Novice class license was extremely successful, I think. And, we said, 'Well, okay then we have to go back to some form of that.' "

Last year's World Radiocommuncations Conference laid the ground work for countries to decide for themselves what to do about CW and licensing. But Haynie says the WRC '03 decision played a small role in the ARRL's deliberations.

"Morse Code is certainly tradition, I don't deny that," Haynie says. "And I think it's a neat ability. It's a skill. It has nothing to do with intelligence."

Haynie says he and other directors have heard some argue: 'Hey, I had to pass a code test, why shouldn't everyone else.' Haynie says that's like saying I'd like to play golf like Tiger Woods and coming to the realization that's probably not going to happen because you simply don't possess the skills - even with lots of practice. The same logic, he says, applies to CW. For many hams, he says, it's simply not their bag.

Haynie says the ARRL's proposal preserves CW for one license class, yet opens the doors to the world of HF for those who couldn't learn and master Morse Code to pass even a 5-words-per-minute test.

"People, they realize, they've come to grips: We are getting older. And we're not getting the people into Amateur Radio," Haynie says.

"And the amateur community realizes that we've gotta do something. And, I don't say that the league's proposal is perfect. Neither does any of the directors or officers of the league say that. But it was the best that we could come up with that still preserved the Morse Code tradition for the Extra class exam, and yet, gave you the taste of the old Novice that I used to have 30-something years ago."

Haynie says he's confident, based on his experience with the FCC, that the agency will look favorably on the ARRL license proposal.

"I have a gut feeling that they will take a majority of it, at least I think they will. They'll probably fine tune it, they'll tweak it some because that's typical of the federal government," Haynie says.

"But on the other hand, I know, I know that they want to simplify the Amateur Radio Service. They want three classes of licenses. They want to reduce their workload and continue to do what they like to do and amateur radio take care of itself."

And how long does Haynie think it will take the FCC to act and make any changes to the Amateur Radio license structure? He says don't expect a decision anytime soon.

"I don't see anything happening on any of the petitions, including the league's, probably 'til late 2005," Haynie concludes.

Haynie says his e-mail and phone have been busy since the board's vote two weeks ago. He says he's comfortable with the license proposal and is prepared to support and defend it.

Haynie says he had the chance to do so earlier this week before his hometown radio club in Garland, Texas. He says after explaining the league's rationale to the group, those willing to listen asked lots of questions. Haynie says he felt by the time it was over, many appreciated the league's work on behalf of the hobby.

Haynie's next stop: The 44th Tropical Hamboree in Miami on February 7 where he's expecting to get lots of feedback.

For the Amateur Radio Newsline, I'm Mark Abramowicz NT3V in Philadelphia.

--

If all went as expected, the ARRL was to transmit its proposal to the FCC on Wednesday, January 28th. And less we forget, a word of congratulations to Jim Haynie on his election to a third term leading the United States only recognized Amateur Radio society. The ARRL Letter Board of Directors expressed its confidence in W5JBP's leadership on January 16 with a unanimous vote for his him to continue as President. (ARNewsline(tm))

**

THE BPL FIGHT: AUSTRIAN BPL PROVIDER SUING HAMS OVER NEWS STORY

In what looks to be a case of "he said -- no -- he said," a row is brewing over the introduction of Broadband over Powerline telecommunications in the city of Linz, Austria. One that has a service provider taking that nations Amateur Radio society to court over statements quoted in the media world-wide.

As reported a few weeks ago, stories were circulating that PLT, or Power Line Telecommunications as the Europeans call their BPL system, had been halted in Linz. This, due to interference caused by the system. Also that the Austrian government had enjoined the service provider and the system would never be permitted.

Not true says the BPL provider and the power company and its now headed to court to try to stop the hams from complaining to them and to the press. From across the Atlantic, Jeramy Boot, G4NJH, has more:

--

The Austrian national amateur radio society, OeVSV, has objected to the use of PLT in Linz, stating that it causes interference to amateur stations, and issuing a press release which was picked up by the Austrian mass media. It appears that the OeVSV was misquoted as saying that the Austrian ministry had taken out an injunction against the PLT providers and that the service had been closed down for good in Linz.

The management of Speed-Web Consulting and Linz AG, who are responsible for the PLT transmissions, are disclaiming what they say are "press attacks by Austrian radio amateurs". They say that there has not been any injunction against them and the roll-out of PLT continues.

Speed-Web and Linz AG say that Austrian radio amateurs are doing their best to stop PLT "by filing undue interference complaints". They go on to say that "if there should be any actual, harmful and officially proven interference case caused by Powerline Communications, mitigation measures will solve this very case at that specific location in the concerned frequency".

On the 14th of January, Linz AG stated that it would be suing the OeVSV, as well as its president personally, over this matter.

Jeramy Boot, G4NJH.

--

The decision of Linz A G to sue the ham radio operators over the story of BPL says that in this one, big business is willing to go the whole nine yards. (GB2RS)

**

THE BPL FIGHT: FCC'S ABERNATHY ACKNOWLEDGES AMATEUR RADIO BPL CONCERNS

Here at home, FCC Commissioner Kathleen Q. Abernathy is apparently shifting away from her definition of BPL as a "Broadband Nirvana.” Last week Abernathy specifically cited Amateur Radio concerns about the interference potential of Broadband Over Power Line in remarks she delivered to the Catholic University of America's Columbus School of Law.

According to the ARRL Letter, Abernathy said BPL should not be widely deployed before dealing with ham radio's interference fears. She admitted that she now recognizes that Amateur Radio licensees have raised concerns about the potential for harmful interference. Abernathy described this as something that will have to be addressed before any mass market deployment can occur.

Commissioner Abernathy made her remarks on January 22 at the school's Washington, DC campus. Abernathy said that if engineers can find a way to prevent harmful interference to other radio services, BPL would represent a tremendous advance for consumers, because it could bring broadband to any home that has electric power delivery. (ARRL)

**

RADIO LAW: CONGRESS MAY RAISE INDECENCY AND OBSCENITY FINES

Using obscene and indecent language on the airwaves may soon get very expensive. This as congress considers raising the stakes for those who insist on talking dirty on the radio. Amateur Radio Newsline's Bill Pasternak, WA6ITF, has the details:

--

United States Representative Fred Upton of Michigan introduced congressional legislation to upthe maximum fine for an indecent broadcast from $27,500 to $275,000. Under the Upton sponsored measure the maximum fine for a continuing violation would be raised from $300,000 to $3 million.

Upton had also scheduled hearings to review the FCC's indecency enforcement policies for January 28th. Ken Johnson, a spokesman for Representative Billy Tauzin of Louisiana is quoted as saying that law makers intend to move the legislation quickly in hopes of sending a signal to broadcasters that enough is enough.

This action comes following recent complaints by FCC Chairman Michael Powell. He says that the existing penalty cap on indecency fines was too low to discourage off-color broadcasts.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF

--

Commissioner Powell believes that once broadcasters start to feel the pinch where in their wallets they will start to think twice about transmitting indecency on the airwaves. (Published news reports)

**

ENFORCEMENT: UPS TO THE FCC: YOU HAVE OUR FULL COOPERATION

The FCC has received a letter from United Parcel Service offering the company's full cooperation in removing any unlicensed radio equipment from its nationwide fleet. This follows a January 7th letter to the Middlesburg Ohio office of U-P-S detailing unlicensed 10 meter operations coming from delivery vehicles in that area.

The FCC also has contacted another trucking company, R and L Transfer of Norwalk Ohio regarding the same type of problem. Unlicensed operators coming to the 10 meter band has been a growing problem around the world in recent years. (FCC)

**

ENFORCEMENT: THAT RADAR IS A NO-NO

The FCC has also written to a pair of hams in the Winfield and Haysville Kansas area. This, regarding a reported piece of marine radar equipment mounted in a land based vehicle. According to the FCC the radar unit was being used for storm spotting without being licensed for this use. The identities of those using the radar system were not revealed. (FCC)

**

HAMFESTS AND CONVENTIONS: OKLAHOMA IN MARCH

Turning to the social scene, the Green Country Hamfest and ARRL Oklahoma Section Convention is slated for Friday and Saturday, March 19th and 20th at the Claremore Exposition Center in Claremore Oklahome. Claremore is not far from Tulsa, and the event will feature free parking, loads of vendors, on-site ham radio exams, numerous forum sessions along with some truly nifty prizes. More information is on the web at www.greencountryhamfest.com (KC5FM)

**

HAMFESTS AND CONVENTIONS: FIRE CANT STOP THE DIXIFEST IN MEMPHIS

Despite a fire that destroyed its normal venue, Dixiefest 2004 in Memphis Tennessee will happen the weekend of February 14 and 15. Planners were able to find a new home at the Mid-South Fairgrounds' Pipkin Building. This is only a proverbial stones-throw from the Shelby County Building which was destroyed in the December 2003 blaze. More information about this premiere event can be found on-line. Just take your web browser to www.dixifest.org and take a peek. (Via e-mail)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

OUR GOLDEN PAST: CARL & JERRY "LIVE" AGAIN

Its time for a trip back to the 1950's. To a kinder and gentler Amateur Radio. Our tour guide for this journey is Bruce Tennant, K6PZW:

--]

Remember the names Carl and Jerry? Well if you were playing with ham radio in the 1950's and 1960's you are well aware that these are the first names of the two fictitious teenage electronic whizze's. Characters created by the late John T. Frye, W9EGV, for his long-running magazine series of the same name.

The Carl and Jerry stories appeared in Popular Electronics from October 1954 through December 1964. They told of the adventures of two perennial teenage boys who shared a special bond because of their shared love of music, electronics and radio. Now, many of these stories are again available to read to enjoy thanks to a new spot on the world-wide-web. Better yet, they are the kind of stuff you may want to read to your grandkids, especially if they have the same wonderment as you when you were their age.

Where are they and how do you these Pop Com classics? Thats easy. Just follow to link you will find in this weeks print edition of this Amateur Radio Newsline report. And good news for our sight impaired listeners. Word is that the print works well with most devices to help the blind to read as well.

Traveling back in time for the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, enjoying the past.

--

So far there are only 21 of the stories in the seriers on the web, but enough to keep you glued to your computer screen for several hours. They are there to read at http://home.gwi.net/~jdebell/pe/cj/cnjindex.htm (ARNewsline(tm))
**

INTERNATIONAL - IARU: NEW IARU REGION 2 ARDF WEBSITE

Back to the present and word that Region II of the International Amateur Radio Union now has web site to serve as the voice of its Amateur Radio Direction Finding Working Group. The site provide links to official rules and regional results along with contact information for A-R-D-F groups and individuals throughout the Region.

Plans call for the site to be in four languages that include English, Spanish, French, and Portuguese. If you have any comments or wish to volunteer with the translations, please contact Dale Hunt, WB6BYU or Ken Harker ,WM5R. Their respective e-mails are wb6byu@arrl.net and wm5r@arrl.net. The website can be found at www.ardf-r2.org (Press release)

**

INTERNATIONAL - UNITED KINGDOM: OFCOM NEW TELECOM REGULATOR

From the international wire, word that Ofcom is name of the new regulator of

Amateur Radio in the United Kingdom. The agency also holds responsibility for control other services that include broadcast television, radio, and numerous wireless communications services. More about Ofcom is on-line www.ofcom.org.uk (GB2RS)

**

INTERNATIONAL - VK: AN AUSTRALIAN LICENSE IS REQUIRED

A note to those of you who intend to operate from Australia on an extended visit. It appears that many amateurs, including those operating maritime mobile from within Australia's territorial waters, are using their own callsign with the 'stroke VK' suffix. Under Australian telecommunications law, this is not permitted for any lengthy stay. Once past the grace period, all radio amateurs operating from Australia, and more importantly, from Australia's territorial waters must obtain an Australian license and individual VK callsign from the Australian Communications Authority. If you don’t you will be told to go off the air. (Q-News, RSGB)

**

INTRUDER WATCH: HARMONICS BOTHER 20 METERS

An unidentified broadcaster on 14.280 MHz, has been identified as a harmonic of a Radio Liberty. The transmitter in question operates on 4.760 MHz and it’s the 3rd harmonic that been heard in V-K-Land.

Meantime, another intruder on 14.320 MHz has been found to be Radio Uzbeckistan. This time it’s the 2nd harmonic of a transmitter on 7.160 that’s responsible for what’s being heard. (Q-News)

**

WITH THE ARRL: MAJOR CHANGE IN DXCC POLICY ANNOUNCED

A major change in the criteria for determining what is a new DXCC entity. An ARRL news release says that the organizations Board of Directors has removed the guideline that provides for an entity to be added to the DXCC list if it has a separate International Amateur Radio Union member society.   The ARRL says that this provision had the unintended consequence of bringing in applications for IARU membership that do not further the objectives of the organization. In fact, all it has done is to create what ARRL terms as an unfortunate and unnecessary administrative burden for the IARU. (ARRL)

**

DX

In DX, Dwayne Barbee KE4RVT is the latest ham on the air from war-torn Iraq. Q-R-Zed dot com reports that Barbee received his Amateur radio license from the Ministry of Communication on January 25th. He has been assigned YI9RVT and will be operating SSB and CW on all bands for the next 12 to 18 months from the city of Al Kut. (qrz.com)

And word that SM5DIC was scheduled to return to the Democratic Republic of Congo on the 20th of January. He will be there for two months and will operate the club call 9QZ0AR in his spare time. (GB2RS)

Also, AA1M and W1USN will be active as J3 stroke their home calls from Grenada to the 6th of February. They will operate CW, SSB and some PSK on the High Frequency bands. For all of these operations, QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: RADIO FROM SPACE - THE SETI INSTITUTE IS MONITORING

Lastly this week, scientists searching the stars for aliens are convinced an E.T. is out there -- it's just that they haven't had the know-how to detect such a being. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the rest of the story:

--

Science Online says that technological advances have opened the way for scientists to check millions of previously unknown star systems, dramatically increasing the chances of finding intelligent life in outer space in the next 25 years.

The article quotes Seth Shostak. Shostak is the senior astronomer at California's non-profit Search for Extraterrestrial Intelligence Institute says that it is like looking for needles in the haystack that is our galaxy, but there could be thousands of needles out there. But on a recent visit to Australia to attend a conference on extraterrestrial research, Shostak said detecting alien life is only the start.

Since it was founded in 1984, the SETI Institute has monitored radio signals, hoping to pick up a transmission from outer space. Its Project Phoenix conducts two annual three-week sessions on a radio telescope at Arecibo, Puerto Rico. Project Phoenix, is the privately funded successor to an original NASA program that searched the heavens for signals from extra-terrestrial beings. That program was canceled in 1993 amid much skepticism in the Congress regarding the possibility of life in outer space.

For the Amateur Radio Newsline. I’m Norm Seeley, KI7UP

--

But Science Online says that the search has been slow. About 500 of 1,000 targeted stars have been examined and no extraterrestrial transmissions have been heard. (ScienceOnLine)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the newly created Roy Neal, K6DUE, Amateur Radio Mentoring Project is up and operating. We already have signed up close to a dozen hams who are willing to assist others. If you can help, or if you need assistance please drop a note with your name, address, hone number and area of expertise to mentor@arnewsline.org

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved. Now please stand by for a special mesaage regarding Amateur Radio Newsline's current financial situation from Andy Jarema, N6TCQ. It following this 5 second pause.

--
5 sec pause
--

This is Andy Jarema, N6TCQ, Chief Financial Officer of the not-for-profit organization you know as the Amateur Radio Newsline. And once again, I am using the single word -- HELP! If you value this service, please help. We try to keep these kind of thing as subtle as we can.

You responded so wonderfully to our plea last April, and we haven't really asked for anything
since. But, unfortunately, your response dwindled in the waning months. The expenses of bringing you the up-to-date news on Amateur Radio did not.

We'd really like to hear from you. And we'd really like to hear from the repeater clubs out
there. These are the wonderful folks who re-transmit our broadcasts, bringing your nets increased value, and giving your members the latest in Amateur Radio news and information to enhance their hobby.

But Amateur Radio Newsline cannot continue without the funding needed to pay the monthly bills. And right now, we can't.

In the quarter century that it has existed, no one at the Amateur Radio Newsline has ever taken a salary. We all volunteer our time and talents. But what we ARE faced with are monthly expenses for gathering and delivering the news to YOU! We are talking telephone, Internet access and the like. This has not changed.

The bottom line is this: I'm asking that you try to find it within your organization or yourself as an amateur to continue this service. As we've said before, whether Amateur Radio Newsline continues to provide this service or if it disappears is totally your decision. We're here to serve you for as long as you want us. Your response over the next several weeks will provide the answer.

The address for the Amateur Radio Newsline is Post Office Box 660937, Arcadia California, 91066.

Looking forward to hearing from you REALLY soon, I'm Andy Jarema, N-6-Tiny California Quake.

My Icom 756 Pro, is picking up a very strong hum.
It is not RF feed back, but rather AC pickup by the microphone cable.
It does the same thing when hooked to a dummy load. It doesn't get any worse even when running the legal limit.

IF I reach over and touch any bare metal in the station, or the ground cable the hum is gone.

It does come and goes, but mostly stays.

I resorted to grounding the shield in the microphone cable and the hum is gone. It didn't come back, but with that shield grounded I lose some of the functions built into the mike.

Any ideas as to what is causing this and how to eliminate it with out having to lose functionality in the mike?

ASSISTANCE WITH MOTOROLA GM300 REPEATER

There are some mods published (on Batlabs, and in an old edition of M.R.T.) which have some simple mods for turning a pair of Motorola MAXTRAC mobiles into a basic repeater. Receive activity on one radio keys the PTT on the other radio, and vice versa.

I am attempting to do this with a pair of GM300s'. These are supposedly "the same" radio but the board on the GM300 is signficantly different than the MAXTRAC described in the published material.

Can anyone provide some specifics on performing this mod on the GM300?
I hear it can all be done through the aux. I/O ports on the rear of
the radio.

Thanks!
Dan (remove the NOSMAPM below)

Hi all,

I am looking for rf antennas that could fit into a 1" by 1" plastic
case, operating frequency >500Mhz. They could also be pcb antennas.
Could you suggest me some places to lookfor?

Thanks,
Adam

Dear fellow hams

My Echolink used to work but now it stopped working and I don't know why. I can't connect to the test server, it says 'connecting....'and after a while I get a 'timeout'. I am using Windows 2000 (SP4), have disbabled all my firewall software and it is still not working ..timed out.

What must be running for Echolink to work undr MyComputer-->Manage-->Services&Applications-->Services. This is the only area I stopped certain services but I kept log of what I stopped (for another purpose), started all these services again but it still is not connecting. If I connect to myself, it is working but not to anybody/any link outside. Any help will be appreciated.

I normally use ZoneAlarm but have even disabled it and changed the security settings to 'Medium' as described on the Echlink website - still no reaction.

Any help our there?

Regards
Danie

FOR SALE:
New, MILSPEC, metal film resistors. If interested, make an offer we can't refuse + postage. Came from the estate of an SK that got end-of-contract govt contract parts down in the Tampa area. Will entertain offers on all (preferred), individual lots, or individual resistors.

I had trouble with mine until I configured ports as follows:
EchoLink requires that your router or firewall allow inbound and outbound UDP to destination ports 5198 and 5199, and outbound TCP to port 5200. Source ports are dynamically assigned. If you are using a home-network router, you will also need to configure the router to "forward" UDP ports 5198 and 5199 to the PC on which EchoLink is running.

For how to do this goto URL:
http://www.echolink.org/firewall_solutions.htm

What other sorts of antennas are there exactly? Audio? Light?
Tactile?

Thought they ALL were RF in nature....

could be wrong....

JOE

Yep, you are wrong. Insects had antenna millions of years before man ever walked the earth. In fact, the word "antenna" comes directly from the insect world and was adopted for RF antennas, because they reminded someone of insect antenna.

Subject: HAM EQUIPMENT DONATIONS NEEDED
Message-ID: <20040107115124.26239.00002780@mb-m06.aol.com>
Xref: archiver1.google.com rec.radio.amateur:6285

Long Island Mobile Amateur Radio Club (LIMARC), is looking for DONATIONS of
"Ham" gear, like triband beams, rigs, and towers, to be used for our Emergency
Communication Stations, and Field Day.

If you have any old equipment that you're not using anymore, and would like to
donate it to our cause, we will make sure that you get a nice letter, being
that we have 503 c(3) status with the  I.R.S. ,for a tax deduction, from our
club.
We really need your help, so please try to assist us in any way that you can.

Thanks in advance

Gentlemen:

I have an Icom 765, with an SP-20, also an SM-10, hooked up to my Cushcraft R-5 in my bedroom station. At night I like to listen to the group that frequents 3.805. I have been listening to this group for about 5 years. Living in an apartment, my R-5 is all my landlord will permit. Here is my problem...

I turn on my 765 and start to listen on 3.805 at around midnight EST. The signals are running a respectable S9 + 10 to 20. Then after about 5 - 10 minutes or so the receive on my 765 goes dead. So, I key the mic for a split second and the receive comes back. This time lasting for only 3 minutes or so... Then it goes silent again. I key the mic for a split second and then the signals return. This continues on and off for the next hour or until I get tired and turn it off for the night and "Hit the Rack..."

How can I remedy this situation with my receive failure ???

Thanks in advance,

Dave - N2JBO

Hi Folks:
I've been hearing a digital signal on 1947kc here abouts. It sounds like FSK 300bd packet, except there are resting spots where the tone is steady. (Not NRZ). Multimode says it's 500bd, and looks like 3 frequency shifts. Will not decode with what I have. It fades in and out like DX. Anyone hear this? I'm at FN20ok.
Take Care!
Harry

Go to bed at 11:45... or, check for a failing relay (or is it solid state switching?) in the antenna's xmit/rcv switching circuit

Kind of. "Sideband" is an operating mode that refers to the type of transmitted signal. There are others in addition to sideband: AM, FM, and various digital modes.

Exactly... but while sideband is very popular with hams, with its full name being "single sideband or SSB" just in case you see the more complete term used, sideband is also used by citizen's band radio operators... though it's not as common.

Amateur Radio Newsline™ Report 1378 – January 9, 2004

Amateur Radio Newsline report number 1378 with a release date of Friday, January 9, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. V-K hams celebrate a new ham radio, some new Amateur Radio problems in Nepal, and Canadian hams learn that they may loose 220 to 22 MHz. All this and the latest in the war against B-P-L on Amateur Radio Newsline report number 1378 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: NO-CODE COMES TO VK-LAND

Major changes to ham radio in Australia were celebrated on the air on New Years Day. Q-News Graham Kemp, VK4BB, listened in and tells us what he heard:

--

When 1 January 2004 arrived, so to did a new era for Amateur Radio operators around Australia. At one minute past midnight, amidst the fireworks across Australia, Amateur Radio short wave frequencies lit up, too, as they celebrated the removal of a requirement for Morse Code qualification by getting on air in unprecedented numbers.

A quick scan through the 80 meter band during the first hour of the QSO party showed that there was standing room only with stations of all license levels participating eagerly in the party with some limited and novice limited stations handling high amounts of static and nearby station noise with considerable skill .

All states and territories activated special radio stations for the event. There were plenty of Wireless Institute of Australia stations on the air to help with the bonus contacts with VK5WI, VK6WIA, VK2WI, VK4WIG, VK4WIA and VK4WIT heard during the quick scan around 80 meters.

In the act, the Wireless Institute of Australia's club station VK1WI was activated from the home of their President, Alan Hawes. Way up north long time WIA supporter John Stevens took to the airwaves from the Townsville region.

As the morning wore on the stations operating were fewer but still at a level that veteran operators say rival the heydays of HF operating when Novice licensees were first able to access the HF bands.

From Q-News Australia, I’m Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

Still more changes to ham radio down-under is expected in the coming months. (Q-News)

**

RESTRUCTURING: NEW BANDS AND NO-CODE TO CROATIA

Croatia has become the first country in Region 1 to benefit from the expansion of the 40 metre band agreed at the World Radio Conference in Switzerland last summer. 9A amateurs have also been given privileges at 70 and 3,400 Mhz.

New amateur radio regulations came into effect in Croatia on the 26th of December. Since then, amateurs there may operate between 7,100 and 7,200 kHz on a Secondary basis, with a maximum power of 1,000 watts PEP, in addition to the normal Region 1 allocation of 7,000 to 7,100 kHz. On 4 metres, Croatian amateurs now have 70.000 to 70.450 MHz, with a power limit of 10 watts. They also gain a new band between 3,400 and 3,410 MHz, with a maximum permitted power of 150 watts.

The Morse code requirement for an HF bands licence was also dropped with the new regulations and there are now only two licence classes there: the full licence and a beginners' licence.

I’m Jeramy Boot, G4NJH, in Nottingham England. (GB2RS)

**

RADIO POLITICS: HAM RADIO IN NEPAL

Some bad news about ham radio in Nepal. Charles Harpole, K4VUD, says that his efforts, along with those of 9N1AA, to expand ham radio in that nation and to establish a memorial club station for the late Father Marshall Moran, 9N1MM, are on an indefinite hold. This, due to the disturbed social and political conditions there.

Harpole says that all radios and other gear that was donated some years ago have been distributed to the currently licensed native 9 N hams. Harpole says that the gear will come back to a club station someday. Harpole asks that everyone bear with this situation and extend understanding. (OPDX)

**

SPECTRUM REALLOCATION: 220 - 222MHZ ON THE BLOCK IN CANADA

Canadian Amateurs may lose part of the 220 to 222 MHz in the 1 point 3 meter band. band. Thats the recommendation being made by the Radio Advisory Board of Canada to Industry Canada following an 18 month survey. Rick Johnson, KA9VZD, is in Antioch, Illinois, with more:

--
In a move reminiscent of the situation in the United Sates back in 1991, the 220 to 222 MHz band would be transferred away from Canada’s Amateur Radio operators and given to that nations Mobile Radio service. That’s the bad

part. Here's the good news. The Radio Advisory Board of Canada has recommended that Amateur repeaters in this portion of the band be grandfathered to continue operation for a number of years. That time period would be decided by Industry Canada which is Canada's radio and telecommunications regulator.

The Radio Advisory Board also recommended allocating 219 to 220 MHz to amateurs in Canada on a secondary, non-interfering basis. This says the R-A-B-C would put the band in agreement with a similar allocation now available to radio amateurs in the United States.

But here is where the Radio Advisory Board of Canada begins to think outside the proverbial box. While most administrations seems to frown on the idea of hams and non-hams sharing spectrum and talking with one another in a common allocation, Canada has other ideas.

The Radio Advisory Board wants a 150 kHz wide parcel in the reallocated band be designated as "Public Service Spectrum." A small band to be shared by Canadian Amateur Radio operators and Canadian Mobile Services for special public safety and disaster communications applications. In other words, Canadian hams could talk with their non ham counterparts -- and vice versa -- in a disaster scenario.

Radio Amateurs of Canada, as a member of the Radio Advisory Board of Canada, has opposed any changes to the 220 to 222 MHz spectrum. Unfortunately, so far with very little success.

For the Amateur Radio Newsline, I'm Rick Johnson, KA9VZD, reporting.

--

Industry Canada must now take this advice and decide what it will do with 220 to 222 Mhz, and how soon. The full story is on the web at http://www.rac.ca/news/canada.htm (RAC)

THE BPL FIGHT: BPL INTERFERENCE PROVEN TWO-WAY

Two organizations have filed comments with the FCC that augment previously expressed worries about potential interference from and to Broadband over Power Line systems. One of them shows that service providers could loose a lot of income if anyone operates even a low power radio near a B-P-L transmission line. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--

Picking up on the what it terms as grave concerns expressed by the Federal Emergency Management Agency over implementation of B-P-L on December 4, the nonprofit Disaster Preparedness and Emergency Response Association has called on the FCC to require impartial B-P-L field testing as well as additional public comment and full and open public hearings.

The ARRL Letter says that in comments to the FCC the Disaster Preparedness organization concluded that serious interference to and disruption of critical emergency communications systems in several licensed services throughout North America would almost certainly result from BPL implementation as currently proposed.

Endorsing earlier FEMA remarks, the group said that proposed B-P-L systems don't just pose a risk of interference. Rather, they have already been shown to actually cause harmful interference to licensed radio services.

Meanwhile, the Amateur Radio Research and Development Corporation has filed additional test data with the FCC. This, to support preliminary findings suggesting that BPL systems are susceptible to interference from even modest Amateur Radio HF signals. AMRAD said its newest data demonstrated that amateur operation in the test neighborhood would cause many homes to lose their Internet connectivity.

For its RF susceptibility experiment, AMRAD used the Potomac Electric Power Company system test site. It features a mid-1960s vintage home with unshielded interior electrical wiring and overhead power lines.

AMRAD's tests found that at a distance of just over one-half mile, data transfer ceased in the face of a signal from a mobile 100 watt transmitter on 3 point 980 MHz. When sited adjacent to the test property, AMRAD said data transfer went away in all but one instance at a transmitter power of just 4 watts operating in the proposed Broadband Over Powerline spectrum.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

What AMRAD has now done is to prove that interference with B-P-L will be a two way problem. More so for data providers who won't see much profit if something as simple as a 5 watt C-B radio can shut down a neighborhoods B-P-L operations. (ARRL)

**

THE BPL FIGHT: TAMPA TRIBUNE PRESENTS BOTH SIDES

An excellent article that details both sides of the B-P-L controversy appeared in the January 5th edition of the Tampa Tribune. In it, reporter Will Rodgers provides not only the industry side of the issue, but the ham radio side as well. The article can be read on-line at the cyberspace address in this weeks printed Amateur Radio Newsline report. You can read the article on-line at www.tampatrib.com/Business/mgalzo1pd.html (Via e-mail)

**

WITH THE FCC: CHAIRMAN POWELL PROMOTES A FREE MARKET TELECOM REVOLUTION

The chairman of the FCC is sending out a message that the migration to digital telecommunications will not falter. Michael Powell says that entrenched service providers such as telephone companies and cable television providers can either join the party or suffer the consequences.

In a December 29th interview with reporters and editors from the San Jose Mercury News, Michael Powell shared a number of personal views. At one point he stated the current migration to digital is really a simple thesis. One that says for the past 100 years we've had one kind of communications system. That being a system that’s both analog and narrow band. And while it's the greatest machine ever built by mankind, it's also extremely mature, and it's really, in Powell’s view, at the end of its innovation life.

Perhaps Powell’s most controversial statement came in regard to companies that are not eager to invest in the digital revolution. He said -- quote: "I have no problem if a big and venerable company no longer exists tomorrow, as long as that value is transferred somewhere else in the economy."

You can read more of what FCC Chairman Powell had to say at www.siliconvalley.com/mld/siliconvalley/7591252.htm (CGC)

**

RADIO LAW: FCC STILL NOT “NAMING NAMES” IN ENFORCEMENT ISSUES

The FCC’s decision to no longer identify those hams allegedly violating the Part 97 Amateur Rules continues into the new year. The agency’s Daryl Duckworth, N-N-Zero-W, has the latest word:

--

Duckworth: “The FCC, at least temporarilly, has revised the format in which it is supplying information on Amateur Radio enforcement actions. The new format provides only the state and city with a synopsys of the action taken, without naming any indiciduals.

Pursuant to privacy concerns, the FCC currently is reviewing its proceedures in its radio services regasrding the release of information about individuals. Following this review, the FCC will determine its privacy policy for the future. “

--

As we go to air there is still no word as to when the revirew of privacy proceedures at the FCC will be completed. Its been about two months since the ban on relesing names was put in place. (FCC)

**

COMMUNICATIONS LAW: NORWEGIAN COURT SAYS COPYING DVD’S NOT PIRACY

An appeals court in Oslo Norway has dealt a major blow to those trying to protect the intellectual copyright of material that they own from unauthorized duplication. This, after it upholds the acquittal of a 20-year-old Norwegian man who posted a program on the Internet for cracking DVD security codes.

Prosecutors had appealed a lower court decision after Jon Lech Johansen was acquitted last January of violating Norway's data break-in laws with his DeCSS program for DVDs. The prosecution had sought a 90-day suspended jail sentence, confiscation of computer equipment and a $2,940 fine. But the judge ruled that Johansen could freely copy DVDs he bought, adding he didn't violate the Nordic country's laws protecting intellectual property.

The case was widely seen as a test of Norway's computer protection laws. Prosecutors said they were considering appealing to the country's supreme court. In the meantime, the decision is being viewed as a major setback for anti-piracy proponents in the entertainment industry, worldwide. (Published news reports)

**

RADIO HONORS: GARC HONORS MEMORY OF KU3Z

The Goddard Spaceflight Center Amateur Radio Club in Greenbelt Maryland has honored one of its own. By a unanimous vote at the clubs Christmas party, the "WA3NAN Space Shuttle Retransmission Facility" has ben renamed the "Joe Grzesik KU3Z Memorial Space Shuttle and I-S-S Retransmission Facility." This, in honor of Grzesik’s outstanding support of relaying of space shuttle and International Space Station ham radio communications on the terrestrial Amateur bands for over two decades. Joe Grzesik KU3Z became a Silent Key in 2003. (N8PK vis the WA3NAN News Exchange)

**

HAM RADIO HONORS: SELECTING THE TOP 5 QSL MANAGER SURVEY

John Shelton, K1XN, Editor of the Go List says that it’s time again for his newsletters’ annual “Top 5 QSL Manager” survey. This is is a process by which DX’ers get to choose those that they consider to be the best QSL Managers with whom they have had dealings with in the past 12 months. Its also a way to provide at least a small “thank-you” to the work performed by these and other QSL Managers around the world.

The results of this survey will be given to Carl Smith, N4AA, for inclusion in the QRZ-DX bulletin and also announced on the GO LIST Reflector by mid February. To vote, send your list of those who you are the five best 5 of 2003 by e-mail to golist@golist.net before February 1st. Again, that address is golist@golist.net. (OPDX)

**

HAMFESTS: WINTERFEST IN VA. IN FEB.

Turning to the ham radio social calendar, the 28th annual Winterfest sponsored by the Vienna Wireless Society is slated for Sunday, February 29th. The gathering will take place at Northern Virginia Community College in Annandale, Virginia. And if you're ready to take the test, an Examination Team will be on hand Saturday, February 28th. More information is on the web at www.viennawireless.org (KG4OJT)

**

MEETINGS AND CONFERENCES: AMSAT-NA IN FL IN FEBRUARY

And the next meeting of the Board of Directors of AMSAT-NA will take place at the Orlando Airport Clarion Hotel on Saturday, February 21 and Sunday, February 22nd.   Starting at 8.30 am on Saturday, the meeting will be open to all AMSAT North America members wanting to take part.

Among the items to be discussed will be to develop the AMSAT North America Strategic Plan while considering current governing factors. AMSAT members wishing to attend and make a presentation to the Board should advise President Robin Haighton, VE3FRH by February 15th. Let him know the topic and the length of time needed to present. His e-mail is ve3frh@amsat.org (AMSAT-NA)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

SPACE AND SCIENCE: NEW TRAVELING SPACE EXHIBIT

The largest traveling space exhibit ever has made its first stop The 12,000 square foot display will allow visitors to touch rocks from Mars and the moon, take a virtual visit to the red planet and explore the international space station.

The exhibit employs the most advanced technology available here on earth to get its message out. The exhibit will be at Seattle's Pacific Science Center through May 9th. Then, it begins its own journey on a 15 city tour over the next five years. (NASA News)

**

EMERGING TECHNOLOGY: SIREN SENSOR TEST IN L.A.

On the technology front, the Los Angeles Fire Department has been asked to study the possibility of equipping engines with a device to turn traffic lights green. This, so vehicles responding to emergencies don't have to stop at intersections.   Bill Pasternak, WA6ITF, is in our Los Angeles studio with more:

--

Los Angeles City Councilman Tom LaBonge has asked the Fire Department to work with the City's Department of Transportation to start a pilot program using technology such as SirenSensor. This is an acoustically activated device that can differentiate emergency sirens from ambient noise and then warn the civilian driver of the approach of an emergency vehicle. It does this by shutting of a near-by car's audio system or radio and activating both audible and visual signals. The councilman believes that this technology can help police and firefighters respond to emergencies with greater speed.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, in the City of Angels.

--

No word when the tests of this remote control system might begin. More about SirenSensor is on the web at
http://www.findarticles.com/cf_dls/m4PRN/1998_Nov_13/53213508/p1/article.jhtml
(LA News)

**

NEW PRODUCTS: NEW QUICK-CHARGE NiMH BATTERIES

Turning to the latest in electronic products of interest to hams, we have this from battery maker Rayovac. That company has announced a new charger that it says is capable of fully restoring a specially designed Nickel Metal Hydride cell in only 15 minutes. Dubbed the I-C3, the new rechargeable cells and charging system uses Rayovac's In-Cell Charge Control technology that puts the control of recharging into the battery instead of the charger. The company says that doing this offers significant performance and convenience advantages over existing rechargeable and disposable battery systems. More information is on-line at www.rayovac.com (Rayovac)

**

NEW PRODUCTS: INTEL IN YOUR TV

And the world's largest microchip maker will soon unveil plans to make integrated circuits for use in digital television receivers. Santa Clara, California based Intel is exploring a technology called liquid crystal on silicon which is a hybrid between the more expensive silicon microchips and liquid crystal displays. This could significantly lower the cost of flat panel high definition displays. Industry analysts say that if this technology is successful it would pose a serious threat to established consumer electronics chip makers in Europe and Japan, such as Philips and Sony Corp., as well as emerging players like Texas Instruments. (Intel)

**

DX

In D-X, keep an ear open for members of a French radio club who will be on the air from Togo. This as the F6KOP Le Radio Club de Provins 77 announce that they plan to be active from Grid Square JJ06 as 5V7C from March 6th to the 12th. More information is on-line at http://5v7c.free.fr/defaulteng.htm (OPDX)

And OPDX reports that S57CQ, is now active from Bhutan as A52CQ and is expected to stay there through January 14th. Activity is expected to be on all bands as much as possible. QSL via S57DX. (OPDX)

**

THAT FINAL ITEM: THAT FINAL ITEM: ARDF

Lastly, some hams have learned the secret of enjoying the hobby while staying physically fit. They're the fans of on-foot transmitter hunting, also called radio-orienteering and ARDF. Reporter Joe Moell, K0OV, has the story of a California ham who is rapidly becoming one of the best.

--

I've told you about the many direction-finding medals that have been won by Jay Thompson W6JAY, Newsline's Young Ham of the Year. But you don't have to be Jay's age to be a big winner at international on-foot transmitter hunts. 61-year-old Bob Cooley KF6VSE of Pleasanton, California has just brought home a couple of gold medals from the IARU Region 3 Championships in Australia.

The competitions began November 28 near Ballarat, a historic gold mining town in northwestern Victoria province. They were hosted by the Wireless Institute of Australia and organized by the Victorian ARDF Group.

Cooley competed in M60, the Superveteran Category for men age 60 and above. On the 4.7-kilometer two-meter course, he found his required three fox transmitters in 1:30:25, seven minutes ahead of the second-place finisher. Then on the 5.6-kilometer 80-meter course, he did even better, finding all three foxes and getting to the finish line in 1:15:22.

All three IARU Regions hold championships in odd-numbered years. These events for Region 3, encompassing Asia and Oceania, drew 50 male and 9 female competitors from Australia, China, Japan, Korea, and New Zealand. KF6VSE was the only guest from North America.

A long-time competitor at non-radio type orienteering events, Bob has improved greatly since he discovered ARDF in 1999. He finished among the top ten in his age and gender category at the 2000 ARDF World Championships near Nanjing, China. This past summer, he won gold medals on both bands at the 2003 USA ARDF

Championships near Cincinnati.

You can get a link to the complete results from Australia and learn more about world-class transmitter hunting on the Web at www.homingin.com. There you will also find the details on the upcoming USA ARDF Championships, which will take place in California next June. That's homingin -- one word -- homingin.com

From southern California, where we do transmitter hunting every month of the year, this is Joe Moell K-zero-Oscar-Victor, reporting for Newsline.

--

Again Joe’s website is www.homingin.com (K0OV, ARNewsline(tm))

Not exclusive to Ham radio.

Sideband is single sideband suppressed carrier or sometimes abbreviated
SB -- it can be the upper sideband (USB) or the lower sideband (LSB)

used by Hams, CB, Military, SW Broadcast and others.

To see a nice visual -- see URL:
http://www.williamson-labs.com/480_ssb.htm

Pinellas County Government TRS

System Details:
System Pinellas County, FL
System ID 1802
System Type Motorola Type 2 Smartzone
Digital ASTRO APCO-25

Current Call Activity via the Pinellas County Fire/EMS Status Page

Users of this system include all city fire departments, public works, and all police departments except Clearwater and St. Petersburg. These two cities have their own radio systems.

Enter these frequencies into your Trunktracker. The order does not matter.
Those frequencies in boldface are in rotation for Data Channel .

Cell 1 856.2375 857.2375 858.2375 859.2375 860.2375 866.5875 867.0875 868.1625
County Wide 856.4625 857.4625 858.4625 859.4625 860.7375 866.3375 868.4125
"Ridgecrest" 856.7375 857.7375 858.7375 859.7375 860.4625 866.0875 868.6625

St. Petersburg 856.7125 857.7125 858.7125 859.7125 860.7125
"Toytown" 856.9375 857.9375 858.9375 859.9375 860.9375

Cell 3 866.300

Cell 4 866.1625

The following is a table of all talkgroup IDs on the Pinellas County system. As you may know, the system is being upgraded to a smartzone system, and some talkgroups are being moved around. If there is no ID listed in the New ID column, either no new ID has been logged, or the ID is not going to or has not yet changed. Also, you may hear comms on both the new and/or old talkgroups. If your scanner is not capable of interpreting the status bit, the ID will be +3. For example, when 8192 is patched to 16576, the talkgroup will show as 8195. On newer scanners, such as the Uniden 780, this is not an issue, as the scanner "ignores" the status bit. Keep watching this list...this is where I will post updates to new talkgroups that are logged. Thanks to Ben for helping ID the patches.

If anyone has IDs that I don't have on this list, please send them to me.
-Thanks

> both the new and/or old talkgroups. If your scanner is not capable of
```

> interpreting the status bit, the ID will be +3. For example, when 8192 is patched to 16576, the talkgroup will show as 8195. On newer scanners, such as the Uniden 780, this is not an issue, as the scanner "ignores" the status bit. Keep watching this list...this is where I will post updates to new talkgroups that are logged. Thanks to Ben for helping ID the patches.

Just wondering what you guys think is better? DX4WIN or DXBASE?

Want to update the versions I have but don't know which one to choose to spend the money on the update for?

Please let me know what you think.

Thanks n9mxt1@aol.com

It has a serial port too. Encrypt your messages and send them to a file on your PC!

Emulates 3-rotor and 4-rotor (M4) Enigma.

Easy to build - it took me 2 afternoons and worked first time.

8-)

John

Dr OM,

IMHO, DX4WIN is by far the better program!

73,
Kim

Looking for some info as how to adjust the SSB carrier point on a TS-950SD
(not SDX).
Please e-mail to na1a@netzero.net or remove NOSPAM before replying.
Thanks,
Duke

A week after its installation, my brand-new IC-V8000 decided to stop transmitting today. Everything else works fine, it just won't transmit. I have done a few master-clears of the processor and unplugged the power several times but it's just plain dead on TX.

Has anyone else had their V8000 go belly-up on the TX side? I realize it's simply a case of infant mortality but I was led to believe it was nearly bulletproof. Since I did drill a few holes in the bottom cover as part of its installation, I have to send it to ICOM because the dealer can't swap it for a new one due to the holes I drilled into the bottom case cover. Yes it worked fine after the holes were drilled and no, the rivets I added in the bottom cover are not even close to any of the circuitry.

Hi again, All.

Thanks for all the help on dual band mobiles and stealthy antennas. I have saved many responses for future reference. What I decided to do is to just wait until I can swing a new IC-706MKIIG--I'm going to ebay some items to finance it.... I also joined the ARRL and chose the Wire Antenna book for my bonus.

Thank you all.

73
Russ

I'm taking my General exam tomorrow! Thanks to http://www.aa9pw.com/radio/ for test assistance. I've already passed the Element 1 Morse Code section so tomorrow should be easy.

I use my SSB on my boat and will be cruising to the Bahamas in a couple of months. It wasn't clear in any of the information that I read, but while there do I just append "/C6" to my call sign? What about as my boat travels up the East Coast toward New York? Do I continually append /4 in Florida, /3 in Maryland, etc?

http://www.arrl.org/FandES/field/regulations/io/maritime.html

Sez
"When you're in International waters, you operate under the auspices of your FCC license, but you must be mindful of the frequencies assigned to other ITU Regions. The world is divided into three "pieces of the pie." You are bound by the privileges assigned to the ITU Region from which you're operating and by the privileges as outlined by your FCC license. It's a good idea to follow your call sign with the words "maritime mobile" or "aeronautical mobile" followed by the proper ITU Region number. "

Also sez -- ITU Region are
"If your station is operated in Europe, Africa or the adjoining waters, you're in Region 1. North and South America and the adjoining waters make up Region 2. The "rest of the world" is comprised of the countries of Southern Asia (excluding the countries of the Arabian Peninsula) as well as the islands of the Pacific and Indian Oceans. A detailed map of the ITU Regions

can be found in the ARRL FCC Rule Book. "

When you are within the USA limits -- no need to ID with callsign/district, however many do -- to let others know what district they are in.

Example W6XYZ is travelling or living in Florida -- he/she can ID as simply W6XYZ -- or as a courtesy to listeners -- W6XYZ/4

However with the FCC allowing folks to keep their callsign when they change districts -- W6XYZ might live in Ohio not California !!!!

Another fine kettle of fish is KH6xxx is a Hawaiian callsign but he/she might live in West Virgina !!!!!

Thanks for the references.  I've put in a couple of comments below:

> For Bahamas operating  -- see URL:
> http://www.qsl.net/oh2mcn/c6.htm
> Included is contact info to further inquire -- E-Mail and phone number

This implies some difficulty in dealing with the Bahamas to obtain a
reciprocal license agreement.  I found just the opposite.  I wrote 3 emails
to their office and was always responded to within a single day.  That page
says it will take 1 to 3 months to get the agreement.  The officials in the
Bahamas told me that they usually turn it around in 2 weeks and will fax it
(for free) to a marina in the US in case we are already underway.  My direct
impression was that they were extremely helpful.

Hello, all :)
I have an Azden PCS 5000

I am looking for the complete pin-outs for the mic connector.

I keep seeing the ones for packet radio and I already have those.

Just need the actual pin-outs since the manual doesn't show them.

Tnx in advance

Sean

Amateur Radio Newsline™ Report 1379 – January 16, 2004

The following is a closed circuit advisory for Amateur Radio Newsline bulletin stations. It is not necessarily for broadcast.

According to Support Fund Administrator Andy Jarema, N6TCQ, Amateur Radio Newsline has only received enough funding of late to keep the service going for another month or so. In other words, the bills from last November have been paid , but now money has to be raised to keep from loosing the phones and e-mail service from bills accrued in December.

Andy says that Newsline continues to exist hand to mouth on a week to week basis. He says that It is up to you and the listeners to make sure that it is funded so that it can continue to provide this vital service. Otherwise he may soon be forced to pull the plug.

Please help us to keep The Amateur Radio Newsline on the air. Our address is the Amateur Radio Newsline Support Fund, Post Office Box 660937 in Arcadia California. The Zipcode is 91066. Again and as always, we thank you.

That ends the closed circuit advisory with Amateur Radio Newsline report number 1379 with a release date of Friday, January 16, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The ARRL Board meets to discuss the future of ham radio and lots of news on the B-P-L front. Find out the details on Amateur Radio Newsline report number 1379 coming your way right now.

RESTRUCTURING: ARRL BOD MEETS IN CT JAN 16-17 TO DISCUSS WRC-03

Look for some major changes in the structure of the United States Amateur Radio service to be proposed or at least put open to study. This as the American Radio Relay Leagues Board of Directors holds its first annual meeting of 2004 as this newscast goes to air. Amateur Radio Newsline’s Henry Feinberg, K2SSQ, reports:

--

What’s to come under the ARRL Board of Directors scrutiny? The ARRL Letter points to the big item being the implementation of changes in US Amateur Radio rules. This, in the wake of World Radiocommunication Conference of 2003.

Among other significant changes, W-R-C 03 delegates agreed last summer to leave up to individual countries whether to require a Morse code test for access to amateur high-frequency allocations. Several nations have already dropped the code testing requirement for High Frequency access. In the United States, the FCC last year invited public comments on 14 Morse-related petitions for rule making, but it has not yet acted on the issue. When it meets, the ARRL Board is expected to discuss in detail recommendations in response to W-R-C 03 that were developed during last November's meeting of the ARRL Executive Committee.

Most observers generally believe that there will not be any major action by the FCC to implement W-R-C 03 changes until it hears from the League. This Board meeting is expected to generate an ARRL position that will be transmitted to the regulatory agency, but you will have to wait until the meeting is over and the League issues its own statement to find out what that position is. We suggest you keep an eye on www.arrl.org the next few days for any breaking news on ARRL Board decisions.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, in New Jersey.

--

Among other actions, the Board also will elect members to the Executive Committee and appoint three directors to the ARRL Foundation Board. The Board also will elect officers for the next two years. Incumbent President Jim Haynie, W5JBP, has indicated that he plans to run for a third term. (ARRL Letter, others)

**

RESTRUCTURING: IARU REGION 1 TO MEET IN FEB

Meantime the International Amateur Radio Union will be holding its next regional conference in a few weeks. Q-News Graham Kemp, VK4BB, is here with that story:

--

The Twelfth Regional Conference Is being held from February 16 - 20, 2004 in Taipei, Taiwan. There are Working Groups, where most if not all the business is discussed and these run parallel to one another. A wealth of information is exchanged on the floor at these Working Groups.

There are formal discussion times and of course many informal discussions and gatherings such as over meals and receptions and so on. Contacts made at these conferences assist when an issue comes up back home, help can be sought on a first name basis.

There will be workshops on two important topics. The first is a Workshop on WRC 2003. It will include a detailed discussion on the new Article 25. To facilitate the discussion, a paper by Michael Owen VK3KI is being circulated with the Conference papers so that all societies will be able to make an advance study and brief their delegation on issues to raise and matters for seeking clarification.

The other Workshop will be on The Society's IARU Liaison Officer. The Workshop will help gain a better appreciation of the duties and responsibilities of the Liaison Officer and hopefully lead to greater satisfaction from the work carried out by Liaison Officers.

Graham Kemp, VK4BB, reporting.
--

More information on this upcoming conference can be found on-line at the Japan Amateur Radio Leagues website at www.jarl.or.jp/iaru-r3 (Q-News)

**

THE BPL FIGHT: AUSTRIA TURNS OFF ITS BPL

And a big win overseas on the B-P-L front as reported by the ARRL Letter. The Austrian Amateur Transmitter Federation says that a Broadband over Power Line field test in the city of Linz has been cut short as a result of excessive radio interference. According to the national ham radio society, the Government Ministry for Commerce, Innovation and Technology closed down Linz Power Company's B-P-L pilot project because it was generating interference on the HF bands.

Shortwave broadcaster Radio Austria says the case that brought the issue to a head was a Red Cross report. One that documented that emergency services radio traffic during a disaster response drill last May was the victim of massive B-P-L interference. According to the broadcaster, measurements were said to have indicated that radiation from the B-P-L system exceeded permissible field strength levels by a factor of 10,000.

Last fall, Linz amateurs and their national leaders got together with power company representatives in an effort to resolve BPL's incompatibility with High Frequency ham radio operation. The meetings followed news reports of interference to emergency service communications and QRM complaints from several area hams.

The Commerce Ministry Order not only means the end of the Linz B-P-L pilot project. It also perminently curtails any future the deployment of this technology in Austria. (ARRL)

THE BPL FIGHT: PANASONIC TO INTRODUCE HOME BPL SYSTEM

A form of Broadband Over Powerline may be coming to a house near you. This as Matsushita Electric announces that it has developed a high-speed home power line IP networking technology capable of high-definition video transmission. Amateur Radio Newsline’s Bruce Tennant, K6PZW has more:

--

Best known for its Panasonic-brand products, a newly developed Matsushita Electric technology will make it possible to provide broadband connectivity to every room in a house via existing home power lines. This, using an Panasonic branded adapter about the size of an audiocassette that the company says cannot be interfere with by radio amateurs.

The adapter contains a power plug, power supply, LAN connector and an L-S-I chipset that converts broadband data into signals that can travel over a power line. The unit connects a broadband Internet link such as D-S-L or optical fiber lines to the existing power lines in the home. According to Panasonic, a user simply plugs the P-L-C adapter into any AC power outlet to create a home broadband networking without installing new cabling.

The most interersting claim being made by Panasonic is that the new technology it calls H-D P-L-C resists interference from other signals such as those from ham radio that the company says often use the same frequencies as wired communications. In order to realize this capability, Panasonic claims that it combined Orthogonal Frequency Division Multiplexing and Wavelet technology to reduce the noise caused by the interference down to one-fifth of typical noise levels. This the company says creates a proprietary interference-resistant and ultra-high-speed modulation-demodulation method without use of additional filter circuitry that eliminates the frequencies where interference is likely to occur. What impact that this new technology will have on over-the-air radio reception by hams and other spectrum users is not addressed.

Panasonic expects to introduce P-L-C adapters for both consumer and office use by the end of 2004 providing that the HomePlug Powerline Alliance determines a final specification in the summer of 2004. An L-S-I chipset will also become commercially available at the same time.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.

--

Matsushita Electric and its Panasonic subsidiary exhibited this new Powerline Communications technology at 2004 International CES held last week in Las Vegas. Both companies are members of the HomePlug Alliance which has been working with the ARRL to notch out amateur frequencies from its powerline communications signals. (ARNewsline(tm), CQ -- from news releases)

**

THE BPL FIGHT: W1RFI SPEAKS IN PA

Meantime, one of the leading experts in the area of Broadband Over Powerline interference has made his thoughts known. Speaking at Frankford Radio Club meeting on in Philadelphia last Tuesday night, Ed Hare, W1RFI, said that B-P-L is not good news for the radio spectrum. Amateur Radio Newsline’s Mark Abramovich, N-T-3-V, was there and has this report:

--

When Ed Hare talks, amateurs and others listen.

During an hour-long presentation at the FRC's meeting on the University of Sciences campus here in Philadelphia, Hare made the case that Broadband Over Power Lines is a threat to the future of the hobby.

"If these B-P-L systems came to my neighborhood, HF Amateur Radio as I know it would be over," he explains. "I mean S-9 on multiple bands would seriously cripple me.

Oh, we've had more serious threats when Amateur Radio was shut down after the world wars, but this ranks up there with it in terms of the potential to cause harm to the types of Amateur Radio that many of us enjoy doing."

The reason: Hare says B-P-L field tests by a handful of electric utilities use power line systems to carry high-frequency or HF signals to homes and businesses to give them connections to the internet.

"My neighbor's computer system is a local interference problem," he says. "I'm not going to hear the one three blocks up the street.

But Broadband over Power Line, they're going to intentially conduct those signals onto the overhead lines that will run through my house and then they're going to build this as big as an entire neighborhood. Clearly it has a different interference potential."

Hare says he's charted the interference on 20-meters, calculating it on a national and worldwide scale should B-P-L be rolled out.

"The ability of HF to sustain worldwide communication if you have 30-microvolts per meter of noise will not exist," Hare says.

He says the interference potential goes beyond the ham bands.

"This will affect military spectrum, this will affect international broadcasting spectrum, this will affect other government spectrum," Hare says. "This will affect commercial HF spectrum and as I tune outside the ham bands, you know what? That's not a radio wasteland, there's a lot of stuff there."

And, Hare notes, there's serious concern about medical-diagnostic devices.

"I go to my doctor's office, it's a house in a residential neighborhood," Hare says. "And he's going to hook me up to the E-K-G machine to find out whether I'm going to die before the end of the day. And, if that thing's interfered with, maybe I'll get a false positive or a false negative."

Finally, Hare says the amateur community is not alone.

"I'm very pleased to see groups like FEMA, NTIA and others getting involved with this saying essentially the same things ARRL is doing based on their work," Hare says.

"They, too, see a serious inteference potential to HF that needs to be addressed before B-P-L could ever be considered in any way."

For Amateur Radio Newsline, I'm Mark Abramowicz NT3V in Philadelphia.

--

More on the fight to stop B-P-L in future Amateur Radio Newsline reports. (ARNewsline(tm))

**

RESCUE RADIO: NIUE DEVASTATION REPORTED BY HAM RADIO

From the rescue radio file, word that radio amateurs became a lifeline when tropical cyclone Heta ripped through the tiny island republic of Niue two weeks ago. The storm left the tropical paradise with no regular means of communicating with the outside world and summoning much needed relief aid. Enter ham radio.

According to news reports, a radio operator on the island put out a a call for help which was answered by Steve McCully, W7TZ/ZF2CQ, in the California community of Oak Hills. In fact, it was McCully who phoned the New Zealand Consul General in Los Angeles and provided that government with its first notification that Niue had been ravaged by 186 mile per hour winds.

**

RADIO ALLOCATIONS: RULES FOR 5.9 GHZ INTELLIGENT TRANSPORTATION ADOPTED

The FCC has adopted service and licensing rules for the 5.9 GHz Band for Dedicated Short Range Communications or D-S-R-C. This, from 5.850 to 5.925 Ghz in the Intelligent Transportation Systems Radio Service.

According to the Commission, DSRC systems will provide a limited-range, wireless link to transfer information between vehicles traveling at high speeds and roadside units or other vehicles. Some examples include intersection collision avoidance, work zone warnings, road condition warnings, electronic toll collections, and electronic payment for gas, fast food, or parking.

More is on the web at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-242309A1.doc (CGC)

**

ENFORCEMENT: 10 METERS NON-HAMS IN THE SOUTH PACIFIC

Three new non ham radio intruders to the 10 meter band have been monitored down-under by Wayne Featherstone VK4ZRT. All appear to be Asian in location and all operate the A3E mode at around 0700 U-T-C. Listen for them on 28.215, 28.225 decimal 25 and on 28.285 Mhz. (Q-News)

**

ENFORCEMENT: $5.4 MILLION DOLLAR FAX FINE

Some good news for anyone who is sick and tired of getting unsolicited junk faxes. Federal regulators approved a record $5.4 million fine against a company for faxing unsolicited advertisements to consumers.

The five-member commission unanimously approved the penalty on Wednesday, December 31st but did not announce its decision until Monday, January 5th. The FCC said Fax.com accrued the penalty because it violated the rules 489 separate times incurring an $11,000 fine for each instance. In affirming the fine the commission rejected arguments from Fax.com that the ban on unsolicited faxes was unconstitutional and that the fine was excessive.

The Federal Communications Commission said the fine given to Fax.com, Inc. was the largest ever for violating do-not-fax rules that went into effect in 1992. Fax.com sends faxes on behalf of clients that pay a fee. Its website claims that the company offers the industry's largest fax number database of more than 30 million numbers. Company officials did not immediately respond to a requests from the media for comment. (FCC)

**

COMMUNICATIONS LAW: BLAME THE COMPUTER

Prosecutors looking to throw the book at accused computer hackers have come across a legal defense. In four words, “the computer did it.” And in this era of hijacked PCs and laptops, jury’s are believing it.

In one case in the U-K, nineteen year old Aaron Caffrey was recently acquitted on charges of hacking into the computer system of the Houston Pilots back in 2001. Houston Pilots is an independent contractor for the Port of Houston.

Caffrey had been charged with breaking into the system and crippling the server that provides scheduling information for all ships entering the world's sixth-largest port. Although authorities traced the hack back to Caffrey's computer, he claimed that someone must have remotely planted a "trojan program" onto it. That it was the trojan and not him that did the hacking. (Published reports)

HAMFESTS AND CONVENTIONS: THE 44TH MIAMI TROPICAL HAMBOREE

Turning to the hamfest and convention scene, the 2004 season really kicks off the weekend of February 7th and 8th. This, when the doors of the Miami Dade County Fair Expo Center in Florida swing open to welcome the 44th Tropical Hamboree.

This years Hamboree has a long list of great programs with speakers that include such notables as ARRL President Haynie W5JPB, FCC chief rules enforcer Riley Hollingsworth K4ZDH, IARU President Larry Price W4RA, CQ Communications' Rich Moseson W2VU and Radio School's Gordon West WB6NOA. They will take part in a free form round-table discussion of the future of the Amateur Radio service. Moseson and West will later join Florida’s own Sherri Bower, W4STB, in the conventions Public Relations Forum.

Attendees will also get to hear the latest DXpedition Adventures presented by South Florida DX Association and learn about Amateur Radio at the National Hurricane Center. There will be lots of vendors and all the other niceties that make the Miami Tropical Hamboree a must attend on the convention circuit. The event is sponsored by the Dade Radio Club of Miami, Inc. More information is on-line at www.hamboree.org (Tropical Hamboree)

**

HAMFESTS AND CONVENTIONS: CHARLOTTE COUNTY HAMFEST

Meantime, March 6th is the date for the Charlotte County Hamfest in Englewood, Minnesota. Sponsored by the Englewood Amateur Radio Society, the event will feature swap tables, tailgating and overnight hookups for those bringing a recreational vehicle. The venue is the Charlotte County Fairgrounds and you can find out more in cyberspace at www.earsradioclub.org (Worldradio)

**

HAM RADIO IN SPACE: AIR LEAK ON ISS LEADS TO CONTACT CANCELLATION

A small air leak on board the International Space Station forced cancellation of the Monday, January 12th scheduled contact with the Armstrong Middle School in Flint, Michigan. The I-S-S recently began experiencing the slight loss of air pressure, which the crew had to locate and repair. This meant that they had to devote all their time to resolving this issue using special ultrasonic monitoring. The leak was located and repaired late the same day. Contacts missed are in the process of being rescheduled. (ARISS)

**

HAM RADIO IN SPACE: UPDATE ON OPERATIONS FROM ARISS

We also have an update on what's happening with the new radio gear on board the International Space Station and why hams on the ground heard un proto packets for a while. Amateur Radio Newsline's David Black, KB4KCH, is here with the details:

--

Frank Bauer, KA3HDO, is the Chairman of ARISS. Amateur Radio on the International Space Station. And Bauer says that he has been sifting through the many e-mails he has received over the past few days regarding ham radio operations from the orbiting outpost.

Bauer says that the new Kenwood D 700 radio recently delivered to the ISS is still in what he terms as its "raw" form. In other words, the ARISS team has not yet run a formal engineering checkout of the new hardware and the ISS crew has not gotten the operations procedures uplinked to them.

According to Bauer, at this point in time the Kenwood radio system is not properly configured for digital operations. A reconfiguration change occurred after it was brought on line which has led to this issue. So, what hams see in the way of packets coming from the station right now will probably not be what they will see in the future.

As to the signal fading problem Bauer says that its probably due to the antenna that's currently in use. The astro-hams are now using the new antenna system located on the Service Module and is a single, bottom mounted unit. Since the structure of ISS is very large, it is quite possible that the ham radio signals are getting some blockage.

Bauer says that ARISS will continue to evaluate the antenna system performance. He notes that there are now 4 antenna systems that can support 2 meter and 70 cm operation. This says Bauer gives a lot of possibilities with the antennas, including signal splitting, if need be.

As to the packet signals heard during a recent school contact? Those who heard it heard history being made. The first ever multiple radio operations from the International Space Station. While the older Ericsson radio system was doing the school contact, the new Kenwood radio system was active doing packet. It was also -- perhaps -- the first man made Q-R-M from space.

For the Amateur Radio Newsline, I'm David Black, KB4KCH

--

Bauer says that the astro-hams kind of surprised everyone on the ground by getting the radio system installed much earlier than they had anticipated. As a result, the Amateur Radio on the International Spasce Station team has been working feverishly with the space agencies to get the procedures uplinked and engineering checkouts scheduled. (ARISS)

INTERNATIONAL - INDIA: HAM RADIO AT THE CHILDREN’S SCIENCE CONGRESS

On the international scene, ham radio was a part of India’s 11th National Children Science Congress. Organized by the an educational group in the city of Lucknow the event ran from the 27th to the 31st December with more than 2000 students, teachers and science promoters from various parts of that nation taking part.

According to VU2DCT, Lucknow hams were also called by program organizers to give the demonstration on Amateur Radio for the benefit of participants. Most of attendees were astonished to listen a live QSO between VU2WAP and a ham in Columbia, South America. During their presentation the hams emphasized the role of Amateur Radio in disaster situations. (Q-News)

INTERNATIONAL - SOUTH KOREA: HOMEGROWN SOFTWARE IS BEST

South Korea is considering requiring mobile phone operators to use locally developed software for downloading music and games. According to news reports, that nations Information and Communication Ministry is pushing for the compulsory use of in-country developed software for downloading on new mobile phones in order to standardize the wireless Internet platform.

South Korea is Asia's third largest mobile market and one of the fastest-growing wireless Internet markets. As of the beginning of 2004 there are 33.44 million mobile phone subscribers, or about 70 percent of the country's 48 million population. (Science Today)

**

DX

In D-X, word that the Five Star DX’ers Association has announced plans for a very large-scale DXpedition to Rodrigues Island in March and April next year. The callsign will be 3B9C. An international team of nearly 30 will operate no fewer than 15 separate stations will take to the air on virtually every band and mode possible. The Five Star DX’ers Association is the same group that organized the very successful operation from the Spratly Islands in 1998 and the subsequent record breaking D68C DXpedition to the Comoros in February 2001. (IRTS)

Also, word that DJ4KW and D-K-9-G-G will be active from Belize until the end of February. Callsigns being used are V31YN on CW and V31GW on RTTY. Activity is on 160 through 10 meters. Please QSL as directed on the air. (OPDX)

And for those of you who perfer your D-X and D-X awards a bit higher in frequency, Peter Heins, N6ZE says that he will be able to conduct VUCC field checking in Springfield, Massachusettes several times during the next few weeks. You must be a current ARRL member to avail yourself of this service. Those wanting to take advantage of Pete’s offer should e-mail him as soon as possible to n6ze@aol.com (N6ZE)

**

THAT FINAL ITEM: THE POTTY MOUTH AND THE VURGER

And finally this weeek, customers at a Troy, Michigan Burger King are getting something extra with their orders that’s a little harder to swallow than a hamburger and fries. And its coming by radio. Rick Johnson, KA9VZD, is here with a complete menu on this one:

--

The Detroit News is reporting that police in nearby Troy are looking for the person who has found a way to broadcast on the same frequency as a local Burger King drive-through radio system. The jammer has interrupted business transactions with obscene remarks on several occasions that have startled customers.

The most recent incident took place on January 8th. It happened when the manager went outside to apologize to customers and look for the source of the salty talk. Suddenly a voice boomed from the speaker and said -- quote: “There’s nothing you or the police can do about this, so get your fat -- err -- lets say posterior -- take your fat posterior back inside and take your goons with you.”

Police suspect the calls are being made by a mobile radio transmitter or walkie-talkie in the vacinity of the restaurant. Illegal use of any telecommunications device is a misdemeanor in the city of Troy. And as we all know, its also a serious violation of Federal law.

Heading out the door for some fast food, I’m Rick Johnson, KA9VZD, reporting for the Amateur Radio Newsline.

Hey -- can you make that a double cheeseburger and a double order of rings. Yeah and hold the mayo....

--

Sounds as if the story made Rick a bit hungry. And oh yes. Troy police say that they have the FCC for assistance to track down this all beef potty-mouth with a mustard laced tongue. (ARNewsline(tm) from vasrious sources)

Hw can I construct 110 deg phasing line for 3.8mhz? 450 ohm window type ladder line preferred.

This is for 2 dipoles each 121' long and 70' apart. Height above avg ground 60'. I would like to feed 1 dipole 110 deg out of phase of the other..

Jay, I think you answered your own question, in a way. You want one
of the lines to be 110 degrees longer or shorter than the other.
You need to know the exact Velocity Factor of your ladder line.
Then a wavelength of ladder line(360 degerees) at 3.8mhz is:
Wl=(299.6/3.8)*VF
So, 110 degrees is (110/360)*Wl

Add this amount of ladder line to one side.
How to determine the VF of the lader line. Use an AUtek or MFJ antenna
analyzer.
Other wise, to do this without one means you have to drive a dummy
load. Take a long length, about 32' or so of line and add a 50 ohm 5
watt resistor to one end. Set your rig output to < 5 watts and drive
the other end of the line and wwatch the swr meter. Your rig will read
1:1 Swr when the line is exactly 1/2(and multiples) wavelength long.
From the frequency that the line is 1/2 wavelength, you can determine

the VF from the (physical length)/(calculated length).

Or you could read the specs for the type of line you are using which should
include the VF. Analyzers are nice until you realize you don't have one :(

I mispoke. The velocity of light is 299.8, or
more precisely, 299.7925, so;
Wl=(299.8/3.8)*VF

Transmission line characteristics vary considerably from one
manufacturer to another and even from the same manufacturer. That's
why you have to
measure your VF to get the exact length.

Pat

Long Island Mobile Amateur Radio Club (LIMARC), is looking for DONATIONS of
"Ham" gear, like triband beams, rigs, and towers, to be used for our Emergency
Communication Stations, and Field Day.

If you have any old equipment that you're not using anymore, and would like to
donate it to our cause, we will make sure that you get a nice letter, being
that we have 503 c(3) status with the I.R.S. ,for a tax deduction, from our
club.
We really need your help, so please try to assist us in any way that you can.

Thanks in advance

Ive got a FT-1000D....I'm gonna get a pair of 1000 MP's in a week...I make
38 grand a year

You live on long Island where the median income is 110 grand a
year....mostly higher and your asking for donations?

Just dont sound right to me

110 grand a year?? Where in the hell did you get that figure??
I'm on Long Island and I say that the "medium" income as you call it (for a
single person) is around $40-50K
And Long Island has the highest price electric in the country!! And is one of
the highest tax areas in the country as well as new / used homes being sold.
That's why many Long Islanders are looking to move. Just to DAMN expensive for
MANY here to afford!!!!!!!!!!
And that's a fact!!!!!!!

Got that figure from a nice jewish lady that lives there.

Yea she said it was expensive....She lives in Glen Head

Electric Broadband
15 North Mill Street
Nyack, NY 10960
(845) 348-3181
www.electricbroadband.com

To : Federal Communications Commission
From: : David Shpigler, Electric Broadband
Re : Expertimental License Application
Date : December 23, 2003

The applicant herein, Electric Broadband, is an integrator of Broadband over Power Line (BPL) systems to deliver high-speed Internet access over the electric grid. Electric Broadband would like to conduct a BPL test with respect to the delivery of high-speed Internet access and related broadband services over the medium- and low-voltage lines in the Cottonwood, AZ area. Accordingly, we submit the following information regarding the trial:

Geographic Area � The test area is Cottonwood, AZ.

Frequency Range � 2.46 to 38 MHz.
Time Period � Six months
Number of customer premiuse units � 10
Number of pieces of additional equipment on low- and medium- voltage lines: Under 10

Equipment Description � The equipment in use will be from EBA PLC Corp.
Projected equipment use includes 3 Master Modems to inject the signal onto the medium voltage lines, 1 repeater to extend signal distance, 4 coupling units to interface between the electric grid and the BPL equipment, and 10 customer premise modems. While the number of customer premise units is not projected to increase at all, the number of other units may increase or decrease slightly based on the specific layout of the grid and the location of customers.

Installation Description � EBA's BPL equipment will be deployed and tested on the medium- and low-voltage lines in the Cottonwood, AZ area. A total of ten customer presmise locations will be Internet enabled through this trial.

Technical Testing � The trial will be used to evaluate customer acceptance and FCC compliance. The trial will be in compliance with Section 15.109 of the Rules.

Marketing Description � BPL services will be made available to a total of ten customers, comprised of residential and commercial units. Customers will receive service at no charge to volunteer trial participants. Marketing information will be gathered regarding customer perceptions on ease of use and other system performance characteristics.

More garbage crowding the airwaves.
Already have broadband on cable lines. What more do we need?

No problem here!  Been running 100 watts around a CAT-5 network for years.
I also know other hams with networks and never heard them complain of
problems.

The twist in the CAT-5 cable is there to prevent interference.   Twists
cause signals to cancel out each other.

Independent analysts have already demonstrated that it will not be economically viable especially in the rural areas and it is a bit late for it to attempt to compete in the urban areas. So it will be a trial and then fall flat on its face. So you won't end up with anymore choices than you have now.

Plus it will be subject to constant dropouts and disconnects from all the interference sources in a normal environment not just radio sources. Plus it will interfere with any nearby radio activitY (police and ambulance for example).

Hello,   First, thanks for all the recent responses regarding the available morse learning tools. I went with "Gordo's" tapes and am well on my way to getting morse down and passing element one. I plan on using CW regularly once I master it.

Today, I am wondering what you all think about the current dual-band (2m and 70cm) rigs out there. I am thinking Icom IC 706 MKIIG for a future rig, but for now, I am cash-strapped and am looking in the $200.00 range for a rig, mobile is fine.   Any opinions, suggestions are welcome.

Thanks!

Hands down I'm going to say the Yaesu FT-8800R is the best out right now, although it's not really in the price range you mentioned. In the entry level arena you have a couple of options - the Kenwood 707 and the Icom 208 come to mind, and Yaesu just introduced the 7800. Neither of the first two rigs really impressed me though, and the 7800 is too new for me to have an opinion on yet.

You may want to consider a used rig. I went with a used Yaesu 5100 when I bought my first mobile rig. Paid about $150 for it, and it turns out it has a couple of issues (lights are out, fan doesn't seem to ever come on). I liked the 5100 so much that when I went looking for a new dual band rig I went with the 8800.

Consider that even after you upgrade to a 706 MKIIG you still may want to keep a dual band 2M/70cm rig on hand as well (if you have the space in you vehicle). The 706 is a single band only rig, and from what I've seen it's a bit tough to program compared to a lot of other rigs. While it may be a great HF rig, it seems to leave the VHF/UHF bands up to other rigs to do better.

There are a few handheld dual banders in the $200 range, but they
limit you to about 5 watts, and a possibly weak signal, especially if
you use the built-on antenna. For a dual bander mobile, you'll need
about $275 and up, plus another $100 or so for a power supply to use
it at home. I'd save a little more money, and get the mobile -- it'll
give you a lot more power and bigger signal -- and then when you're
ready to get into CW on the HF bands, you just need to get an HF-only
rig. And if you buy a big enough power supply, about 35 amps, it will

power both your dual bander and your HF rig. Also, with separate rigs, you'll be able to monitor 2m/440 while you work the HF bands.

Make sure too that you can understand the manual and how to program the radio you're looking to buy. Some are fairly intuitive and not that difficult to program, others are confusing at best. My first dual-bander HT was a real nightmare to program and once learned, it was still difficult to come back six months later and do more programming without the manual.

Amateur Radio Newsline� Report 1377 � January 2, 2004

Amateur Radio Newsline report number 1377 with a release date of Friday, January 2, 2004 to follow in 5-4-3-2-1.

The following is a QST. V-K hams welcome 2004 with new spectrum. P-29 hams enter the new year with no-code and the FCC ends 2003 embracing smart radios. All this and more on Amateur Radio Newsline report number 1377 for the first week of 2004 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: EXCLUSIVE SPECTRUM DOWN UNDER

Hams in Australia start 2004 with an unexpected gift. Some exclusive spectrum in the 75 meter band. From Brisbane here's Q-News Graham Kemp, VK4BB, with the rest of the story:

--

As of January 1st amateur radio operators in Australia have gained exclusive access to 24 kHz of HF spectrum at 3776-3800 kHz for high frequency amateur radio communications between continents.

The new Australian spectrum allocation for the amateur service is made under footnote AUS8 of the Australian Radiofrequency Spectrum Plan 2002 published by the ACA. It aligns well with international arrangements, which means intercontinental communications for Australian amateur radio operators will be improved at these frequencies.

This domestic change has affected other spectrum users. More than 40 government bodies, community groups and commercial organizations were previously licensed for HF communications within this 24 kHz of spectrum, with amateur operators having lower priority access to 6 kHz.

For Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio Newsline.

--

A very nice way to start the year 2004. (Q-News)

**

RESTRUCTURING: P29Z CALLS GIVEN HF GIFT

Australia is not the only nation in the Southern hemisphere to have some ham radio rules changes with the new year. A report out of Papua New Guinea says that the tiny nations has welcomed 2004 by going no-code.

According to Rick Warnett, P29KFS, in Port Morsby, the nations telecommunications regulator PANGTEL has issued an opinion confirming that P-N-G hams holding a Limited Amateur Operator's Certificate of Proficiency now have access to all High Frequency bands granted by PANGTEL. As a result, from 0000 P-N-G time on December 31st hams assigned P29Z series calls have full High Frequency access in the ham bands from 165 KHz thru 28MHz in addition to their 430 MHz to the multi Ghz allocation. (Q-News)

**

RESCUE RADIO: IRELAND PREPARES FOR POWER OUTAGES

Meantime on the other side of the world, what amounts to a mini Field Day exercise took place in Ireland December 6th and 7th. This when that nations ham radio rescue service known as AREN took part in a twenty-four hour simulated test to help prepare members for a possible power failure such as those experienced recently in the US and in the United Kingdom.

The test had several goals. Among them was to establish that AREN members could operate without mains power and to have members ready for activation during a sustained standby period. Also important was maintaining discipline by politely and firmly holding control of a working frequency for the duration of the exercise.

According to assessment reports, the AREN members demonstrated a keen and effective will to efficiently operate such a service. They also held the primary exercise frequency of 3.660 MHz without incident for the duration of the watch period. (IRTS)

**

RADIO LAW: S.C. INDICTMENT IN BPL RELATED SCHEME

Back here at home, it looks as if the first scam associated with Broadband over Powerline technology has surfaced. Amateur Radio Newsline's Jim Davis, W2JKD, tells us the who, the what, the why and the where:

--

News reports say that two Texas businessmen have been indicted on wire fraud and money laundering charges. This in a scheme that defrauded a South Carolina electric utility out of $1 million.

Prosecutors in Columbia, South Carolina say that the two convinced the utility to invest the money in research they said would allow voice, video and data to be sent to homes and businesses through power lines. According to the documents filed on Thursday, December 18th, the could not deliver on the promises they had made.

Jim Davis, W2JKD, reporting.

--

No trial date has been announced in this case. (Published news reports)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Southern California Amateur Transmitting Society serving West Covina California.

(5 sec pause here)

**

THE CHANGING OF THE GUARD: Joe Knight, W5PDY, - S.K.

Some truly sad news to report. One of the nicest people ever to hold a ham radio license, Joe Knight, W5PDY, the recently retired New Mexico ARRL Section Manager, died on December 28th. Knight was in declining health when he passed away in Albuquerque at age 76.

For those not aware, Joe Knight held the honor of the longest tenure of any Section Manager in history. He was elected to the post in the mid 1970's and only stepped down last July after his health began to fail. In all he served as New Mexico Section Manager close to 27 years. A record never before matched.

Knight was the subject and chief narrator of an article, "The Luckiest Man Alive," which appeared in the January 2003 issue of QST Magazine. In it, Knight said that Amateur Radio will exist as long as there are people who love the art and science of communicating by radio. The article also outlined the vast emergency communication resources that Knight and hundreds of other dedicated volunteers built up over the years in New Mexico.

John Stuart, AC5ZO, the president of the Albuquerque DX Association, visited Knight on December 22nd. At that time Stuart presented Knight with an honorary membership certificate in that group.

Survivors include his wife, Lois, KC5CXO, who often accompanied Knight on his hamfest and convention visits and was a tireless recruiter for new ARRL members. (ARRL, W7AS, N7US, others)

**

CHANGING OF THE GUARD: Emmanuel G. Papandreas, W4SS, - S.K.

And former ARRL Southern Florida Section Emergency Coordinator, Emmanuel G. Papandreas, W4SS, of Lake Worth, passed away, Friday, December 26th at age 80. Manny as he was better was Southern Florida was SEC for 20 years. A record longer than any of his predecessors. And during his tenure, Papandreas oversaw the amateur emergency communications effort following Hurricane Andrew in 1992 including the staging area at the South Florida Fairgrounds in Palm Beach County.

W4SS was a life member of the West Palm Beach Amateur Radio Club and served numerous terms as President. He also taught amateur radio classes and was an ARRL Volunteer Examiner in Palm Beach county. And, over the years, W4SS was the recipient of many awards and honors from the South Florida agencies served by Amateur Radio. (WA4AW)

**

RADIO RULES: FCC OPENS SMART RADIO PROCEEDING

Turning to the regulatory scene, the FCC has adopted a Notice of Proposed Rulemaking and Order that sets out proposals and seeks comments on the uses and applications for "smart" radio systems. This, In light of the ever increasing demand for wireless transmitters.

Smart radios have the ability to adapt their use of spectrum to their environments. For example, a smart radio system could use geolocation and table lookups to determine whether certain frequencies are candidates for use in a particular area. Then, those frequencies could be scanned, idle spectrum identified, and the best frequencies and power levels selected for a particular link.

More is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-242312A1.doc
and http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-322A1.doc
on the World-Wide-Web. (CGC, FCC)

**

ENFORCEMENT: YOU CAN FLY BUT YOU CAN'T USE THAT RADIO

The FCC has asked more groups representing hang glider enthusiasts to tell their members to stay off the ham bands unless they hold Amateur Radio licenses. The agency's Daryl Duckworth, N-N-Zero-W, has more details:

--

Audio report only. Hear it at www.arnewsline.org

--

Hang gliding zealots who fail to heed the FCC warning could face some pretty severe penalties. (FCC, RAIN)

**

ENFORCEMENT: COMPANY FINED $8,000 FOR FAILING TO PAINT TOWER CABLES

The FCC has issued an $8,000 fine against Tower Properties of Florida, Inc. for having unpainted cables attached to their tower structure. Cables that the regulatory agency says precluded good visibility of the orange and white aviation-painted structure.

Section 17.50 of the FCC's Rules provides that antenna structures such as this one that require painting will be cleaned or repainted as often as necessary to maintain good visibility. Further, as incorporated by reference, alternate bands of aviation orange and white are normally displayed on coaxial cable, conduits, and other cables attached to the face of a tower. (CGC, FCC)

**

COMMUNICATIONS LAW: JUDGE RULES ISP'S DO NOT HAVE TO PROVIDE INFO TO MUSIC INDUSTRY

Meantime, back here in the United States, a major setback for the music industry's anti-piracy campaign. This, a federal appeals rejects efforts by the music producers to compel the nation's Internet providers to identify subscribers accused of illegally distributing music on-line. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

It happened on Friday December 19th and it's being called a substantial setback for the entertainment industry. This, as a three-judge panel from the U.S. Court of Appeals for the District of Columbia overturned a ruling by the trial judge to enforce a copyright subpoena.

Earlier a trial judge had authorized the use of the subpoenas forcing Verizon Communications Inc. to turn over names and addresses for at least four Internet subscribers. Verizon complied but instructed its lawyers to challenges the ruling.

In its decision, the appeals court not only sided with Verizon. It went a step further. This, by declaring one of the crucial arguments used by the Recording Industry Association of America to obtain the original order as -- quote -- bordering upon the silly. The judges words-- not ours.

What does this mean to those artists and companies wanting to protect their intellectual copyright? It won't stop the entertainment industry from suing those who continue to swap music and video files peer to peer, but it will make them a lot harder for the industry lawyers to locate.

From the entertainment capitol of the world, I'm Bruce Tennant, K6PZW, reporting for the Amateur Radio Newsline

--

Its not known if the recording industry plans to appeal this latest decision against it to the U-S Supreme court. (Published news reports)

**

ON THE AIR: IOTA 40TH ANNIVERSARY AWARD

Turning to operating events, Don Field, G3XTT, wants to remind Islands on the Air Award enthusiasts and would-be enthusiasts that 2004 marks the 49th anniversary of this unique program. Don says that a set of files for downloading with lots more information are now available on the Chiltern DX Club website at www.cdxc.org.uk Just follow the IOTA 2004 links and remember this years award began on January 1st. (RSGB)

**

HAMFESTS AND CONVENTIONS: HAMFAIR NY IN FEBRUARY

And a reminder that Sunday, February 29th is the annual Long Island Hamfair and Electronics Show Winterfest sponsored by the Long Island Mobile Amateur Radio Club. The doors open 9:00 AM for buyers. Admission is $6 with children 11 and under welcome through the gate for free.

The location is Levittown Hall in Hicksville, New York. Complete directions are available on the Long Island Mobile Amateur Radio Club website at www.limarc.org/fest.htm (LIMARC)

**

HAMVENTION 2004: AWARD NOMINATING PERIOD CLOSES JANUARY 31ST

And the planners of Hamvention 2004 want to remind everyone that the nominating period for the Radio Amateur of the Year, Technical Excellence and Special Achievement awards program closes on January 31st.

There are three awards that will be given this year. The Radio Amateur of the Year is described as that special person who has made a long term commitment to the advancement of amateur radio. He or she is a well rounded individual who has contributed most of his or her lifetime to our hobby in some very outstanding way.

A nominee for the Technical Excellence award should be a person who has made an outstanding technical advancement in the field of amateur radio. Something like a revolutionary new equipment design or mode of operation that has impacted positively on the day to day operation of many hams.

Last but by no means least, a nominee for the Hamvention's Special Achievement is the kind of special person who has made an outstanding contribution to the advancement of amateur radio. This award is usually given to a respected amateur who spearheaded a single significant project.

Documentation is required. Magazine articles, newsletters, newspaper clippings, videos, and the like will better inform the Awards Committee of your candidate's accomplishments.

The nomination deadline is January 31st, All materials become the property of the Hamvention and cannot be returned.

You can fill out the on-line form and attach documentation files at www.hamvention.org. Then click your mouse on the words award nominations. Printed nominations and documentation go to the Awards Committee, Hamvention 2004, PO Box 964, Dayton Ohio, 45401.

Again, the deadline for all nominations is Saturday, January 31st. (Hamvention)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAM RADIO IN SPACE: ARISS UPDATE

According to ARISS International Chairman Frank Bauer, KA3HDO, the crew on board the International Space Station does not have time to read messages from the ham public and he advises against sending any. We have more in this report:

--

In letters posted to the SAREX remailer, Frank Bauer, KA3HDO, indicates that ham radio is lucky that the crew has been able to fire up the new Kenwood packet radio system that was recently delivered to the space outpost. He also says that its not a good idea for hams to send personal e-mails to the astro-hams indicating that they are really to busy to read and answer them.

As to the new radio itself, Bauer says that the unit is a Kenwood D700 that has been modified to support up to 25 watts maximum output. Normally, if the crew has the system configured with the default settings. This means about 10 watts out which is medium power on the 700.

Regarding the packet frequencies and why split channels rather than simplex is used, Bauer says this. 145.80 MHz is designated a human spaceflight downlink frequency. Right now it shares use on voice and packet for general operations and school group contacts. In the future it will be used at times for voice, packet, repeater capabilities, school group contacts and S-S-T-V. Because of this, the ARISS team would like to keep the downlink frequency clear for all to hear and receive. Therefore, packet simplex is use not a good idea on this frequency.

I'm Bill Pasternak, WA6ITF

--

Meantime, Miles Man, WF1F, has posted some photos of the new station on his MAREX website. The URL is:
http://www.marex.org/hardware.kenwood.html (SAREX BBS, WF1F)

**

EMERGING TECHNOLOGY: RADIO BRINGS FASTER FAST FOOD

On the emerging technology front, fast food has gotten even faster in southern California thanks to the magic of radio. This as five McDonald's restaurants sign a deal with a communications company to allow motorists to zip through the drive-through line without having to stop and pay cash for their food.

The trick is utilizing the same technology that permits motorists to skip stops on toll roads. A transponder will emit a signal to a receiver at the food giant that will automatically calculate the food the fee. The motorist is then billed. The process is said to cut 15 seconds off the normal 131 second-wait for delivery at the payment window. (Technology Corner)

**

INTERNATIONAL-ARGENTINA: ANDES MOUNTAIN LAND CROSSING

From the international page, Carlos Beviglia, LU1BCE, says that between January 4 and 15th, the Radio Club Argentino will participate in the 6th Andes Mountains Land Crossing. LU1BCE is the Secretary of the Radio Club Argentino. He tells the Ohio Penn D-X newsletter that this trek is made every year to honor General San Martin and his army's crossing to Chile. This, during the American Independence War in 1817.

The Radio Club Argentino will provide the communication for the event. The club will set up two High Frequency stations at every camp point throughout the journey. Operation will be mainly on SSB and C-W using the special event call LS4M. QSL via LU4AA, either direct or via the bureau. (OPDX)

**

INTERNATIONAL-CANADA: MEET THE NEW RAC EXEC COMMITTEE

Meantime, to the North, word that Daniel Lamoureux VE2KA, has been elected as president of the Executive Committee of Radio Amateurs of Canada. This, for a 2004 through 2005 term. Also elected to the committee are First Vice President Robert Nash, VE3KZ; Vice President of Regulatory Affairs James Deann, VE3IQ; Vice President Field Services and International Affairs Pierre Mainville, VA3PM, and Noel Marcil, VE2BR, as Secretary. (RAC)

**

INTRUDER WATCH: THOSE INDONESIANS AGAIN

On the Intruder Watch scene, we have some bad news and some good news. First the bad. VK6XW reports hearing 53 non ham stations on the 14 MHz band operating SSB. He says that most appear to be from Indonesia.

The good news? Word that another group of Indonesians who had been using 14.335 MHz have vanished and have not been found again. The same is true for the bunch on 14.252 which have also disappeared from the Amateur spectrum leaving only the 14.144 gang which have gone LSB and moved up to 14.145 Mhz. (Q-News)

**

SPECIAL EVENT: 50 YEARS A HAM

And you might call this one celebrating a personal best. This as Fort Wayne Indiana's Jack Forbing, K9LSB, takes to the air from March 1st to the 14th as K9L in celebration of his 50 years as a licensed operator.

Jack and his friends in the Hoosierland Amateur Mobile Systems group will operate all bands and all modes from K9LSB's home QTH. Equipment for the event will be a Yaesu FT-1000MP Mark V and a Yaesu FTV-1000 6 meter transverter into an yaggi at 65 feet. All other bands will use dipoles antennas. All QSL's go to K9LSB at his Callbook address. And we wish Jack a hearty well done on reaching this milestone in his ham radio career. (Via e-mail)

**

DX

In DX, 9V1DX, is now active as 9V0A from Ellsworth Mountain in Antarctica. He was spotted in 40 and 30 meters CW. Watch 7.001 or 10.108 MHz between 01:30 and 03:00 UTC. (OPDX)

And W4WX, will be active as KG4DX from Guantanamo Bay, Cuba, from January 13th to the 19th. He will operate the HF bands and 6 meters. QSL to his home call, direct with SASE. (OPDX)

Lastly, AP2JZB, was active recently from Pakistan on 17 and 12 meters SSB . Watch around 18.119 and 24.946 MHz between 13:30 and 15:00 U-T-C. QSL as directed on the air. (OPDX)

**

THAT FINAL ITEM: HAM RADIO HISTORY -- THE FIRST BIG REPEATER MEETING - PART I

And finally this week, many hams are not aware that back in the early 1970's repeater growth and continued experimentation in ham radio relay communication came to a screeching halt. This, as the result of overly restrictive regulations on the part of the FCC.

As most radio amateurs of that era knew, this was not a good time to be the owner of a repeater unless you also held an Electronics Engineering degree. Things had to change if F-M and repeaters were to grow again. In the end, one man risked it all to make it happen.

On January 24, 1974 then 73 Magazine publisher Wayne Green, W2NSD, brought a group of prominent "repeater people" before the FCC. He had arranged the meeting in an attempt to convince the Commissioners to roll back the restrictions put in place as a result of Docket 18803. Here's a sample of what that meeting sounded like:

--
Meeting audio sample
--

Want to hear more? Well, over the next several months you can take a trip back in time to join Wayne Green, W2NSD, former Colorado's Marshal Quiat, AG0X, New York's Howard Lester W2ODC and Dick McKay, K6VGP, from California. This, as they and others go to Washington D-C -- to -- quite literaly -- set repeaters free.

Part 1 of the audio of that meeting is on our website as a Newsline Extra. In it you will meet the hams who traveled to Washington to speak on behalf of the nations FM and repeater community. You will also hear some of the presentations made by them. Its on line now at our f-t-p site at www.arnewsline.org slash quincy.

This is literally a page out of ham radio's history. Its here -- right now for you -- exclusively -- on the Amateur Radio Newsline. (ARNewesline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying welcome to 2004, 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

SPECIAL ANNOUBCEMENT TO ALL RADIO AMATEURS FRM Hamvention� 2004

Press Release
(January 2, 2003)

For more information please send e-mail to: media@hamvention.org

Hamvention� Award Nominations Close January 31st

Do you know an outstanding amateur in your club, community, or from on-the-air contacts? Does this person appear to excel in some phase of amateur radio? Do you feel that he/she deserves national and world-wide recognition? If so, then the time is now for you to sit down and write a letter to nominate that special radio amateur for one of three Hamvention� 2004 awards.

There are three categories of awards being presented: The Radio

Amateur of the Year, Technical Excellence and Special Achievement Award.

The Radio Amateur of the Year is described as that special person who has made a long term commitment to the advancement of amateur radio. A well-rounded individual who has contributed most of his or her lifetime to our hobby in some very outstanding way.

A nominee for the Technical Excellence award should be a person who has made an outstanding technical advancement in the field of amateur radio. Something like a revolutionary new equipment design or mode of operation that has impacted positively on the day to day operation of many hams.

Last but by no means least, a nominee for the Hamvention's Special Achievement award is the kind of special person who has made an outstanding contribution to the advancement of amateur radio. This award is usually given to a respected amateur who spearheaded a single significant project.

All amateurs are eligible - Novice through Extra. Recipients are decided by the Awards Committee, based partially upon the information received, not the number of nominations submitted. The decision of the judges is final.

Nominations must be received before midnight on January 31, 2004. Documentation is not only beneficial, but essential in determining viability of a candidate's achievement(s).   Magazine articles, newsletters, newspaper clippings, videos, etc. will better inform the Awards Committee of your candidate's accomplishments. All materials become the property of the Hamvention and cannot be returned. Submissions go by mail to: Awards Committee, Hamvention 2004, PO Box 964, Dayton Ohio, 45401.

(Note: You can also fill out the on-line "Nominating Form" found at the Hamvention� 2004 website (http://www.hamvention.org) by clicking your mouse on the words "Award Nominations," but you are still required to submit substantiating documentation to the address noted above before January 31, 2004)

From: Prodigy Abuse Department <abuse@prodigy.net>
Reply-To: donotreply@prodigy.net

Hello,

This is a WARNING NOTICE from the SBC Internet Services (SBCIS) Policy department, regarding abusive, offensive and/or harassing emails/postings sent from your SBCIS account.

It has been brought to our attention that you are posting on the internet newsgroups with a known AOL user as you're account information RE:
wa3moj@aol.com
Said individual has forwarded a complaint concerning these posts.

Be advised it is a violation of our Terms of Service (http://sbc.yahoo.com/terms/)and Acceptable Use Policy (http://support.sbcglobal.net/legal/aup.shtml) to use our service to email or post, threatening, abusive, obscene, hateful, or otherwise objectionable material.

If additional complaints are received concerning your SBCIS account, it will be TERMINATED, and you may incur an early termination fee.

Sincerely,
The SBCIS Policy Department

Landshark

LMAO!!! Now you forgot to cross
post this to the correct groups George Busch
wa3moj@aol.com
You see this is what has been trolling
RRCB for over three years now. It's not
that he is a ham, no that isn't the problem,
but a troll with a ham license extra class.

Yes, believe an extra class ham, that trolls
RRCB, use's vile vulgar language, harasses, forges,
changes nics to by pass kill file filters, out right lies.

        Um George, you forgot to cross post this so that your
peers can see how an extra class ham acts when they go bad
and start acting like a troll.

I nominate Hans, not because he's a good guy (he's not), but because
he's got a good idea.

Minutes ago I just posted my first time to a Google group and i was surprised to see it said it may take 3 to 9 hours to appear.

Well I was just over at www.activesignals.com and posted a message there and it appear right away. The forum has a neat way of threading the messages making it easy to read. Also you can set it up so all your messages end with the same signature. In my signature I have my name, radios, and location so everytime I post people know a little about me. You can search the forum real easy too. Plus there is a directory of all the members. Tell them Joe sent you.

I just built up a couple of MicroVerts for 40 meters. These are base loaded verticals that use part of the feed line as a counterpoise. My 40M antenna is about 3 feet tall. Actually, the whole thing is about 5 feet tall with the antenna taking up the top 3 feet or so and the rest is for mounting. These are very simple to build. Like all small antennas, there are sacrifices. The designer claims full coverage of the 20M band with his. I was able to get about 105KHz of <1.5:1 BW with mine on 40M.

Check here for info.

LOL, this guy is not really a new user of ActiveSignals.com, but merely
the owner/representative hawking his site!

The owner is being deceptive by pretending to be
a fan of the web site. I bet he is just using the web site for
data mining and adding more gullible people to his Nigeria
419 scam list.

Hey, Pinhead, yeah you! Pay frickin attention! I wasn't knocking the site! I was pointing out that after doing a bit of research, and having the fellow answer my question as to where in Ohio he lived by posting his answer with an info@activesignals.com in the header it was easy to discern that this Joseph fellow was not the new user of activesignals.com that he portrayed himself to be.

He was a shill for his site. Now, the best thing this idiot could have done was simply come in here and tell us he had a site up dealing with various radio topics and to come check it out. Simple as that.

But instead, he comes in here all 'phony baloney' like he's a new user. Bullshit! Be honest!

Did you understand that Pinhead? Or should I try to explain it further for you?

Let's see, who to report SPAM abuse to.....

abuse@VIAWEST.NET

or

abuse@level3.com

or

abuse@earthlink.net

Ah what the hell I report it to all of them.. <BEG>

Say goodbye to your website provider. Don't worry there are hundreds of others out there. <LOL>

Oh Christ George, be a man and admit it, you
put you're foot in your mouth one to many times.

I got this email from SBC after using the screen
nic of wa3moj@aol.com now you might be able
to convince the pet dog, but most people now
are on top your trolling ways.

Subject: Warning - Posting to Newsgroups
From: Prodigy Abuse Department <abuse@prodigy.net>
Reply-To: donotreply@prodigy.net

Hello,

This is a WARNING NOTICE from the SBC Internet Services (SBCIS) Policy
department, regarding abusive, offensive and/or harassing emails/postings
sent from your SBCIS account.

It has been brought to our attention that you are posting on the internet
newsgroups with a known AOL user as you're account information RE:
wa3moj@aol.com
Said individual has forwarded a complaint concerning these posts.

Be advised it is a violation of our Terms of Service (http://sbc.yahoo.com/terms/)and Acceptable Use Policy (http://support.sbcglobal.net/legal/aup.shtml) to use our service to email or post, threatening, abusive, obscene, hateful, or otherwise objectionable material.

If additional complaints are received concerning your SBCIS account, it will be TERMINATED, and you may incur an early termination fee.

Sincerely,
The SBCIS Policy Department

Ramble on, but everyone has seen through your BS trolling.

Here are some of the screen nics used for only a little over a couple of months and the amount of posts made to just RRCB.

Hello,

This is a WARNING NOTICE from the SBC Internet Services (SBCIS) Policy department, regarding abusive, offensive and/or harassing emails/postings sent from your SBCIS account.

It has been brought to our attention that you are posting on the internet newsgroups with a known AOL user as you're account information RE: wa3moj@aol.com
Said individual has forwarded a complaint concerning these posts.

Be advised it is a violation of our Terms of Service (http://sbc.yahoo.com/terms/)and Acceptable Use Policy (http://support.sbcglobal.net/legal/aup.shtml) to use our service to email or post, threatening, abusive, obscene, hateful, or otherwise objectionable material.

If additional complaints are received concerning your SBCIS account, it will be TERMINATED, and you may incur an early termination fee.

Sincerely,
The SBCIS Policy Department

Enjoy!

Jerry and all, Thanks for the responses. Which rigs would you consider
more intuitive and easier to program than others?   I tend to set it up once
and then forget the procedures until I have to do it again. If one rig is
complicated to prgram compared to another, this info would be very helpful
in my decision.

Thanks!

With the Icom T2-H 2m handheld, it only took me about 4 weeks to
program 29 repeaters, and I'm still not sure I got it right :-(

Generally, I think the mobile rigs might be a little easier to
program. There's space for bigger knobs and a more intuituve setup.
Certainly, that is so for my ancient Icom 3200a dual bander.

Hello again,
I have 10 acres which is located in a small development with CC&R's that prohibit amateur antennas. Obviously, towers, yagis other any other rotating antennas are out of the question, so whatever I install has to be inconspicuous. I am looking for suggestions for stealthy exterior antennas for HF up to 70cm. I think I can get by with a dipole or other long wire type--again, I have a lot of open space.   I do have a few oak trees that antennas can be strung between or possibly protrude out of the tops.

Any sage advice here is appreciated.

Thanks.

Russ

Programming becomes easy when you purchase a programming cable and obtain
the software from the manufacturer
Just type the data in your computer and upload it to the rig.
Great for temporary freqs when planning a trip, then erase them afterwards
if you want.

Here in San Diego county, we have over thirty-seven 2M repeaters and over
seventeen 440 MHz machines. I would hate to have to manually program all
these as well as several simplex channels.

And all of your local repeaters should be in memory -- you may desperately
need them during an emergency as we found out during the recent Oct fires.

What kind of nut case has to change his nic so many times?

Maybe you better double up on your schizo medicine George.

The obvious thing is to put up the dipole(s). Then I'd concentrate on the
VHF/UHF stuff. There is/was(?) one
antenna on the market that is disguised as a roof vent--
Ventenna, I believe it is. Someone may know more about this. Another
solution is to disguise a Antron 99
inside a flagpole, the mast being made of PVC. With a
tuner, I can get down to 20 Meters with it, and someone
told me he actually loaded one on 40. Kinda hard to believe! But I know
they will work 10-20 Meters with
the tuner. YMMV.

I have a new Emtron DX-2 that will not turn on(fuses OK).  Does anyone know
of
a phone number or email address for Emtron  in North America?
Any info will be greatly appreciated.
Thanks,
Bob Thornton

Besides the ARRL repeater guide listing, which mine is way outdated, is there a master listing of the SD area repeaters with their information in a master list available? I'm just looking at getting active in 2m again.

With 10 acres and trees, you'll be able to put up just about any size
wire dipole that will be inconspicuos from the boundries of your
property. Feed it with twinlead to a good antenna tuner for all band
HF operation.

For the higher bands, 6 meters and up, j-poles made of twinlead, hung
from trees, will perform admirably. Do a web search for
twinlead/ladderline j-poles. (A 2-meter j-pole is normally also
resonant on 70 cm, its 3rd harmonic.)

A few books to consider: The ARRL Antenna Book. Also, the ARRL has a
book on "stealthy" antennas. See the ARRL web site.

And, go to the web site for The Wireman and get his Wirebook IV.
Inexpensive, with lots of info on wire, feedline, connectors and
antennas.

Finally, check the Force 12 web site for their flagpole antenna. Never
hurts to be patriotic.

There's lots of info available. Enter "repeater map" in a search engine, and you'll come up with plenty of sites.

Thanks and I hadn't thought about just dropping the 'C' from my old Novice callsign, K6TAY is a great 1x3 change and I'll go for it or maybe W6TAY, I always liked 'W' callsigns... the 'Whiskey' phonetic is cool. Thanks for the great suggestion!

The one you want is dependent on how you learn --- what works for one may
not work for you.

For how folks learn -- see URL:
http://ac6v.com/morseaids.htm#Learn

Try the morse programs at URL:
http://ac6v.com/morseprograms.htm
AND chose the one that gives the best results

For some -- two or three programs are effective.

I didn't use software, I used Gordon West's audio tapes. I highly recommend them because of Gordon West's personality and him talking to you throughout (between the sections of code), encouraging you along the way and making them seem much less tedious. He also adds a bit of humor throughout which was warmly received in view of the very cold subject matter. They sure worked well for me and I enjoyed using them far more than some of the software I played around with.

Code Quick tapes did it for me.  The sound alikes stick with me to
this day.

I strongly recommend the G4FON software, which is free for downloading from the internet. It teaches code the right way, i.e. by sound alone. It does not use any gimmicks like "sound alikes" that, while they help you get to 5wpm, form a barrier at about 10wpm. The G4FON uses the Koch method of teaching the letters and introduction of new letters. When you get all the way through it, you will not only be able to pass the 5wpm test but you will be able to steadily increase your code speed without hitting any "barriers" so that you can use it on the air.

Hi Everyone,

I have a rig here which is a Superstar 3900 Black and was wondering if anyone could give me some advice?

I have heard that there are simple conversions which can be done to these to get extra frequencies by connecting and disconnecting different points on the circuit board? I have found losts of information on these mods but am unsure what their outcomes mean????

These are the mods which I found on internet, but what do they do or mean?

Open Clarifier
1)Find D75 and R135 and cut one end of them.
2)On the back of the clarifier knob follow the green wire to the PC board. Cut this wire from the PC board.
3)Now Solder this wire to a constant 8VDC source, like the collector of TR41.
4)Take the yellow wire and cut it from the knob. Tape this wire it is not needed.
5)This should make the radio TX/RX on the same frequency.

10 Meter Mod
1) Find IC7 near the PLL chip.
2) Get a SPST switch and mount it in the radio.
3) Solder a wire from one side of the switch to Pin #13.
4) Solder a wire from the other side of the switch to Pin #12.
5) That's it .Put the radio on 'Band D' then flip the switch to jump up to 28.300 to 28.500.

Tweak and peak
Audio Limiter - Cut R249
AM Power - VR13
SSB Power - VR12

If anyone has any advice or experience of doing this could they help?

This radio also has a small fault which the channel display keeps flickering and shorting on and off whenever it feels like it, does anyone know if this could be easily fixed?

Best Regards

Steven

Congratulations Jerry, and again thanks for sending me that callsign
page. I'm going to test next weekend and the last think I want to worry
about is learning the code again. Once I get my ticket, I'll relearn it
and get back on the HF CW. Look forward to QSO with you when I can. I
have all these toys and want to try them out. HI HI.

Kelly

Very Strange problem... the only tones I can get to transmit are ABCD#* none of the numbers will generate any sound when transmitting.

The number keys work for other functions so I know ti's not a "Hardware" Problem.

I have "opened up" the radio using EVE.

Anyone have any ideas??

Scott KC8RRN

Does anyone make nice wood ham radio license plaques? I have a couple nice
wood plaques on the walls and a ham license replica or similar would be nice
to add to the bunch. TIA! :)

I recently got my Technician+ license and am now studying for my General ticket (exam in January). I'm doing all of this so that I can use my SSB in my boat on the marine channels AND the ham ones as we travel around the Bahamas and Carribean.

I don't have any type of radio at home (1,500 miles away from my boat at the moment) and would love to hear some sample QSO's. Are there any recordings on a web site anywhere? Has anyone done a streaming audio link to ham frequencies for listening?

On the ARRL website, you can download mp3's of the W1AW transmissions....excellent for practice!! Go to the web site and search for w1aw and mp3.

Good luck on the upgrade!!

Sounds correct.

Stay below 28 MHz!

> Tweak and peak
> Audio Limiter - Cut R249

Do NOT do this or you will splatter all over. If the modulation seems
weak, try a power mic.

> AM Power - VR13
> SSB Power - VR12

Using a watt meter tune for max, then back it off a bit. If you're
going to use an amp, set AM for about 3 watts and SSB for no more than
10 watts for a clean signal.

As another poster said, it's probably a cold-solder joint on the back
of the display board. If you're good at soldering PC boards, you could
touch all the solder points up with a fine-tipped iron and probably
fix it.

Need Help with my Kenwood TM-741A Triband FM Mobile Radio.....I purchased the radio new some 12 years ago, with the 220MHz. Module Installed....The Radio Has 144 Mhz / 220Mhz / 440 Mhz.....For years the radio worked excellent....Then about 5 years ago I had lost the out put on 144 (two meters)... However , the other two bands functioned fine...220/440mhz... I sent the radio back to kenwood...and they indicated that the Driver Transistor Q23   2SD1902R on the two meter module was defective. This transistor is an inexpensive part...$ 3.05 ea. Anyway...It seems like the same problem occured the other day...all the symptoms seem the same...Can anyone shed some light on why this seems to happen often?? Also is it possible to replace this 2SD1902R transister with something capable of handling some what more power dissapation?? What ever happened to those motorola hep sustatutes?? Any and all info supplied here will be greatly appreciated....

Thanks
Carl

Thanks - those were honestly helpful...but not to look a gift horse in the mouth...are there any samples which are easier to hear? Those all seem to be quick DX contacts with very little "form" demonstrated. I'm really interested in hearing more normal banter and learning more about proper call-sign announcing, etc. I'm at the point where I've read it all in the books - now I need to really hear it and learn it!

Thanks!

I'm building a kit that Ramsey doesn't sell any longer. I recently read the QST equipment review on this radio and found that Ramsey used to provide a mod kit to eliminate spurious emissions. Ramsey no longer has that kit and doesn't seem to have any information about the components or circuit modifications. I've already checked the typical mod sites. Anyone have any ideas?

Why not find a Ham near you and sit with him/her and tune into the bands.
They can then explain the jargon and procedures if you have questions.
OR
Go to a radio store and listen in.

Proper callsign announcing is strictly by the NATO/ITU Phonetics.
URL: http://ac6v.com/dxphonetics.htm

But DXers have developed their own unofficial version. And some use
others --- also at URL;
http://ac6v.com/dxphonetics.htm

Jargon used by hams is at URL:
http://ac6v.com/jargon.htm

I had looked at that one already most of the links are broken. The TX
mod isn't there unless I missed it

I'd say get rid of that piece of junk and get the Tentec 2 meter radio kit, I built the 6 meter version and it went together like a charm.

Someone here locally had the Ramsey 440 kit, and after building it and finding that it wouldn't work found out that the design was flawed from the start and it could never work.
thanks, John.

Hello, Radio Enthusiast!

The very large coronal hole that has kept the geomagnetic field at active to minor storm levels is no longer in view. This is giving us a nice period of quiet geomagnetic activity, with the result being that we are seeing propagation that is more normal over most of the paths around the world.

A smaller coronal hole is currently near the central solar meridian and is expected to lead to minor geomagnetic storm conditions from Sunday, 21-XII-2003 onwards. Between now and then, it is expected that the 10.7-cm flux will climb a bit, perhaps as high as 130, while the planetary A index (Ap) should remain at or below 10. From 21-XII-2003 onward, the flux will gradually fall to about 100, with some elevation of the Ap index as the geomagnetic field becomes active again due to that coronal hole.

After 31-XII-2003, we.ll see conditions become a bit rougher, again. However, this is due to the coronal hole that we.re seeing, not because of any major flare. Between today and the first of the New Year, there is only a slim chance of any moderate flare, while there will be a good number of minor small flares (B- and C-class flares). There is also a small chance for a proton event from mid to late December. This might make over-the-pole propagation a bit tough.

At the time of writing this bulletin, the solar wind speed is at about 400 km per second, which is a normal speed, with only a slight southerly orientation of the interplanetary magnetic field. As of 17-XII-2003, the sunspot count is 92, and the 10.7-cm flux is 118. The Ap is 10, and the Kp (planetary K index) is 3.

This translates to some very good conditions for the High Frequencies (HF). Expected MUFs are normal, rather than depressed as we.ve seen for the last couple of weeks. The season is great for worldwide DX on HF, and this period between now and the New Year will offer great conditions for most of the time. The highest frequencies will have some long-range F-layer openings (since the flux will be above 100), but they will be short. Lower frequencies will propagate much better over most paths.

Come by and check out the online Propagation and Radio (SWL and Amateur) discussion forum, where a group of us are discussing the science and current events of space weather and propagation:
http://hfradio.org/forums/

In addition, you can always get the latest live space weather and propagation information at http://prop.hfradio.org -- or with a WAP phone, at http://wap.hfradio.org/

Happy Dxing!

Thanks for the encouraging words. I'm going to build the Ten-Tec next, this was a step towards gaining some experience with kits, but thanks anyway.

Motorola:

(6) RF Dummy Load ("RF Load Resistor")
Model: T1013A
Max power: 300w, 0-1000 mhz, 50-ohm. Very good condx.

(1) Test Set for HT's (?)
Model: S1056A/S1057A/S1058A/S1059A (can't determine which) Unmodified, untested, electronically seems in excellent condition. Wooden case dirty and a few dings. Missing 1 (of 2) blank plates across case above the meter.

These are from an estate. Digital pix are available. If interested, make reasonable
offer + postage/UPS. No extra packing charges. Reply to:

I am just getting into amateur radio. This has all been a great experience, but I'm finding myself w/out any place to bounce questions off of.

I have a piece of property that is in a great location for a new repeater setup. It has a birds-eye view of the entire city. Can anyone please tell me if there are any advantages to setting up a VHF repeater over a UHF and visa versa? Does one band have better coverage than another? Etc..

Also, do I need a special type of repeater in order to use digital (encrypted) communication? Ideally, I would like a repeater that can support both encrypted and traditional communication.

Any insight is appreciated!

Thank you,

Barry

NOT USING YOUR ANTENNA ANYMORE?

IS YOUR RIG COLLECTING DUST?

LONG ISLAND MOBILE AMATEUR RADIO CLUB IS

LOOKING FOR DONATIONS OF AMATEUR RADIO GEAR FOR

EMERGENCY COMMUNICATION. WE ARE LOOKING FOR LOW

BAND YAGIS LIKE THE MOSLEY TA-33 OR TA-33 JR, AND

VERTICALS, RADIOS, ROHN TOWERS OR VARIOUS CRANKUP

TOWERS TO USE FOR EMERGENCY COMMUNICATION AND

OUR FIELD DAY EFFORT.

IF YOU DONATE SOME EQUIPMENT TO OUR CLUB, YOU WILL

GET A GENEROUS TAX LETTER, AND YOU'LL BE HELPING A

WORTHY CAUSE.

EMAIL AND LET US KNOW WHAT YOU HAVE!

THANKS IN ADVANCE

Different Types of Digital Trunking/Modulation

Project 25 / APCO-25

Project 25 uses the IMBE Vocoder. IMBE stands for Improved Multi-Band Excitation, and was developed by DVSI Inc. Numerous vendors have produced Project-25 capable subscriber equipment, including Motorola, EF Johnson, Uniden, Racal, and others. There are conventional voice solutions as well as trunking solutions available for this digital voice solution.

Currently, there are two trunking solutions available that use the Project-25 vocoder:

Motorola ASTRO IMBE - This is Motorola's APCO-25 compliant digital solution, and is also called the "ASTRO Digital CAI (Common Air Interface) Option".   This is a proprietary trunking solution that uses the Project-25 vocoder as it's digital voice solution on top of a standard Motorola Type II Smartzone system. Some agencies using Motorola ASTRO APCO-25 IMBE systems include The City of Baltimore, Jefferson Parrish LA, The Metro Washington Airports Authority, Fairfax County VA, and Sarasota County FL.

The Motorola ASTRO IMBE solution uses the Motorola Type II 3.6 Kb Smartzone control channel.

The Motorola ASTRO IMBE solution can allow both analog and Project-25 digital radios to operate on the same network

Project 25 Digital Trunking - This is the Project 25 Digital trunking solution that is vendor independent and designed around the Project-25 Digital Trunking standards. The State of Michigan and the State of Colorado are two of the few systems that uses this format. Very few Project-25 Digital trunking solutions have been deployed at this time. Project 25 Trunking uses a 9.6 Kb control channel.

All radios on a Project-25 Digital trunking system must use digital voice - no analog trunking capability is provided.

Uniden has recently developed two scanners with an add-in card to monitor APCO-25 / Project-25 systems. Motorola ASTRO IMBE systems can be monitored and tracked with the newest generation of Uniden Digital Trunktrackers. Project-25 Trunking systems using the 9.6 Kb control channel can only be monitored in conventional mode, they cannot be tracked using a trunktracker scanner.

Motorola ASTRO VSELP
VSELP stands for Vector Sum Excited Linear Prediction. This is Motorola's original 1st generation "ASTRO" digital product. Some agencies that are currently using the VSELP Vocoder include The City of Cleveland ASTRO system and the City of Memphis ASTRO Public Safety System. Note that the VSELP implementation of ASTRO is not APCO-25 compliant.
Motorola VSELP systems exclusively use the standard Type II Motorola 3.6Kb control channel.

Fortunately, these systems are being phased out in favor of APCO-25 / Project-25 systems.

MA/Com Ericsson EDACS ProVoice
This is MA/Com / Ericsson's implementation of IMBE Digital modulation. It is NOT APCO-25 compliant, but does use the same IMBE vocoder developed by DVSI Inc. The only difference from the APCO-25 standard is how error correction and modulation is provided to transmit the data. San Antonio TX, The State of Florida, and St Tammany Parish are using ProVoice EDACS solutions.
EDACS ProVoice systems use the MA/Com / GE EDACS Control Channel.

There is not a scanner available today that can monitor EDACS ProVoice Digital voice.

MA/Com Ericsson EDACS AEGIS
This is MA/Com / Ericsson's implementation of IMBE Digital modulation. Very few agencies today are using AEGIS Digital Voice solutions, since they are 1st generation digital voice solutions and considered dated.
EDACS AEGIS systems use the MA/Com / GE EDACS Control Channel.

There is not a scanner available today that can monitor EDACS AEGIS

Digital voice.

MA/Com Ericsson OpenSky�

This is MA/Com / Ericsson's implementation of AMBE Digital modulation over a TDMA Channel Format/Slot. AMBE is another vocoder developed by DVSI Inc. The State of Pennsylvania is deploying an OpenSky solution. Operation is very similar to Nextel TDMA Digital Voice systems.
OpenSky systems do not use a control channel.

There is not a scanner available today that can monitor OpenSky AMBE Digital voice.

iDEN� (Integrated Digital Enhanced Network)

iDEN is a Motorola developed high-capacity digital trunking solution in use primarily for SMR's and Business Applications. Nextel is developed and based on the iDEN network infrastructure. iDEN is reported to use the VSELP vocoder, over a 6:1 TDMA Channel.
There is not a scanner available today that can monitor iDEN Digital Voice Systems.

Tetrapol

Tetrapol is an open digital voice standard in use primarily in Europe and overseas from the United States. It uses a 12.5 kHz FDMA GMSK channel.
There is not a scanner available today that can monitor Tetrapol Digital Voice Systems.

Tetra Digital Voice Standard

Tetra is an open digital voice standard developed by the European Telecom Standards Institute (ETSI) and is in use primarily in Europe and overseas from the United States. It uses a 4-Slot TDMA channel. Please see the Tetra Digital Information Page for more information on Tetra systems.
Tetra systems use the Tetra Control Channel.

There is not a scanner available today that can monitor Tetra Digital Voice Systems.

Additional APCO-25 / Project 25 Information

APCO-25 is a project headed by The Association of Public Safety Communications Officials to create a common architecture for two-way radio digital technology. APCO-25 defines the standards that digital two-way radio communications networks will use so that interoperability is a success and so effective bandwidth utilization is maintained. It also defines the technical standards such as Vocoder, bandwidth, signaling, and other features. The PRIMARY goal of APCO-25 digital modulation is to reduce bandwidth requirements for public safety communications, NOT to prevent scanner listeners from hearing communications.

APCO-25 is an open standard, thus there is a lot of information available regarding it.

APCO-25 Homepages

Project 25 Interest Groups Homepage - General information on the Project 25 User Group Homepage. Downloadable PDF's and more.
Project 25 Overview - PDF Document with general Project 25 information.
Project 25 Discussion List -Yahoogroups mailing list dedicated to project-25 information.
US Army Nationwide Digital Trunked Radio - The US Army is deploying digital trunking systems for numerous military and federal agencies around the United States. Here you can find detailed information about there project, their current users, and status updates regarding the BRS.
The APCO International Web Site - This page is homepage for the Association of Public Safety Communications Officials. They are the group that defines standards for Public Safety communications in the United States
The APCO Project 25 Homepage - Here you can find white papers and technical documents regarding the APCO-25 Digital public safety project - on the APCO International Web Site
Users Accelerate Move To Project 25 Systems, Technology - An APCO bulletin posted on the Motorola Web site. This outlines how many large Public Safety agencies across the U.S. have chosen APCO-25 compliant digital system for Public Safety communications. Gives examples of which agencies have made the switch, and which agencies are about to.
APCO-25 Vendors and Equipment information

Motorola APCO Project 25 Homepage - Detailed information on Motorola's Project 25 compatible solution called ASTRO.
Motorola ASTRO Radios - Pictures and description of ASTRO digital mobiles and portables at Motorola's Web Site.
APCO-25 Decoding, Scanners, and other technical information

Digital Voice Systems Inc. Homepage - DVSI produces many of the microprocessors, software, and vocoders used for public safety digital voice systems. Lots of data sheets and information on this web site.
Motorola Encryption techniques - DVP, DES, Securenet, ASTRO, and Fascinator are all discussed here.
http://www.p25.com/ - IFR's homepage designed to communicate the latest information regarding APCO-25 Digital Testing technologies. Much of the information here centers around the IFR 2975 Project 25 Service Monitor. Lots of good reference information here.
Interesting post - posted to Usenet regarding decoding APCO-25 digital signals. This was written by a college student who was developing an APCO-25 digital decoder as a class project. Although we never actually saw anything come out of this, the information posted is very useful non-the-less. Interesting Reading!
Digital Source Coding of Speech Signals - Great information on vocoders, and the IMBE Vocoder standard developed by DVSI.
IMBE and AMBE Speech Compression - [PDF] - Article describing the

scientific theory behind the IMBE and AMBE Speech Compression Vocoders. From the Engineering Electronic Times.

Different Types and Flavors of Motorola Systems

Types of Motorola Trunked Systems

Type I Systems - Motorola Type I Systems refer to the original Motorola systems that were based on Fleets and Subfleets. Each system had a certain number of Fleets assigned, and then each Fleet had a certain number of Subfleets and radio ids. The distribution of Fleets and Subfleets on a Type I system is determined by the system Fleetmap. Motorola Type I systems are not scalable because they limit the amount of IDs any fleet or subfleet can support.

Type II Systems - Motorola Type II systems refer to the the second generation Motorola Trunking systems that replaced Fleets and Subfleets with the concept of talkgroups and individual radio IDs. There are no dependencies on Fleetmaps, therefore there are no limitations to how many radio ids that can participate on a talkgroup. This allows for greater flexibility for the agency.

Hybrid Systems - A Motorola Hybrid system has "blocks" of the system that are Type I Fleets/Subfleets and Type II talkgroups. All radios may be Type II, or the Type I radios might be used exclusively in subfleets while the Type IIs are used exclusively in talkgroups.

Type IIi Systems - Motorola Type IIi Hybrid is a system that has Type I fleets and subfleets, and has Type II radios that are able to use those Type I fleet/subfleets. The common reason that an agency sets up a Type IIi Hybrid system is because they have newer Type II radios that they want to interoperate with older Type I radios, without having to create new Type II talkgroups.

Type IIi Hybrid Systems - A mixture of Hybrid and IIi.

Flavors of Motorola Trunked Systems

Type I (Privacy Plus) - The term "Privacy Plus" refers to a Type I system. Privacy Plus systems are normally older Public Safety systems and SMRs (Specialized Mobile Radio - Businesses who rent out space on trunking systems)

Type II (Smartnet) - The term Smartnet refers to a set of features made available for Public Safety users. This includes better security, emergency signaling, dynamic regrouping, remote radio monitoring, and other features. The following is true of a Type II Smartnet system.

- Up to 28 system channels
- Up to 65535 unique radio ids
- Up to 4000 talkgroups
- APCO 16 Compliant

SmartZone - SmartZone systems are Smartnet Type II systems that are networked together via Microwave or Land-line to provide multi-site wide area communications. Radios affiliate with a particular site, and affiliate with a talkgroup which allows the radio to talk on that talkgroup to other radios on other sites. Many large public safety and state agencies use SmartZone system for wide area communications. The following are the characteristics of a Motorola SmartZone system:

- Up to 28 channels per site
- Up to 65535 unique radio ids
- Up to 48 Sites
- Analog and/or Digital voice
- APCO 16 Compliant

Monitoring a SmartZone system with a Trunktracker is the same process as monitoring any other Smartnet Type II system, except that you can only monitor one site at a time. For you to monitor a specific talkgroup on a SmartZone site, someone's radio must be affiliated to that specific talkgroup. Therefore, if you are monitoring talkgroup "POLICE-NORTH" on a site where no radios have that talkgroup affiliated, then you will not hear any communications on that talkgroup until a radio affiliates to that talkgroup.

SmartZone OmniLink - SmartZone OmniLink provides a broad range of robust system features and utilizes a distributed call processing architecture which links up to four multi-site SmartZone&#8482; systems together into one seamless network, supporting up to 192 sites. Typical users of SmartZone OmniLink systems include organizations who have vast geographic requirements -- such as Electric and Gas Companies, and extremely Large Public Safety agencies.

Simulcast - The term simulcast refers to the process of setting up multiple repeaters to transmit exactly the same communications on the same frequency. Many agencies setup Simulcast systems to increase coverage of their single site Motorola system. 1 Site Controller....multiple transmitters. Cells within multi-site SmartZone systems can also be setup as simulcast.

ASTRO - ASTRO is the trademark name for Motorola's Digital Communications Solution. The original Motorola ASTRO implementation uses the standard SmartZone 3600 baud data channel, and the digital voice solution is based on the Motorola proprietary VSELP vocoder. For more information, see the APCO-25 and Digital Trunking Information Page.

ASTRO CAI - Motorola's APCO-25 compatible Digital Trunking Solution. This implementation uses the standard SmartZone 3600 baud data channel, and the digital voice solution is based on the APCO-25 IMBE vocoder. For more information, see the APCO-25 and Digital Trunking Information Page.

ASTRO-25 - Motorola's implementation of the Project 25 Digital Trunking standard, which uses the TIA 9600 baud control channel. For more information, see the APCO-25 and Digital Trunking Information

Page.

Motorola Trunked Infrastructure Versions
Version Description
2.7 Analog/Securenet SmartZone, adds VOC, ACC and other new infrastructure features.
2.0.3 Astro/Analog/Securenet VSELP SmartZone
3.0 3600 Astro/analog IMBE SmartZone
3.5 3600 Omnilink (multiple zone support)
4.1 Latest 3600 Omnilink release (replaces OL 3.5. product lifecycle replacements and updates for several products, including 6809->MTC3600 controllers)
5.0 First P25 9600 infrastructure release, 800 only
5.1 Adds Simulcast and telephone interconnect to 5.0, 800 only
6.0 Adds IP transport of audio on network to 5.1, lifecycle updates and replacements for several products including, Intellisite repeaters replace Intellirepeaters for new installations. MGEG replaces DIU for console vocoder
6.1 Adds (non-simulcast) VHF/UHF P25 trunking to 6.0. Encrypted MGEG. XTS-2500, XTS-5000 subscribers.
6.2 Adds improved (APCO "explicit mode") support for VHF/UHF P25 trunking, 700 MHz
6.3 P25 Simulcast/voting supported in VHF/UHF/700/800 , P25 trunked user data
notes 3.X and 4.X are APCO common air interface (CAI) compliant.
5.X and 6.X are compliant with both APCO CAI and APCO trunking standards.

Motorola Systems Technical Notes

Converting Motorola Talkgroups
Type II talkgroup IDs come in three flavors:

Uniden Trunktracker format such as 41072.
ID Range: (0 - 65504)
Motorola 3 digit Hex variety such as A07.
ID Range: (000 - FFE)

Motorola 6 digit decimal variety such as 802567.
ID Range: (800000 - 804094)

In the following formulas, M3 represents a Motorola 3 digit Hex format value, M6 represents a Motorola 6 digit decimal format value, and U represents a Uniden format value.

The notation Dec_to_Hex(X) means convert X to its Hex equivalent.
The notation Hex_to_Dec(X) means convert X to its Decimal equivalent.
To convert Use this Formula
---------- ----------------

M6 to U (M6 - 800000)*16 = U
M6 to M3 Dec_to_Hex(M6 - 800000) = M3

M3 to U Hex_to_Dec(M3)*16 = U
M3 to M6 Hex_to_Dec(M3) + 800000 = M6
U to M3 Dec_to_Hex(U/16) = M3
U to M6 U/16 + 800000 = M6

Examples:

Convert the M6 format ID, 802617 to U format:
(802617 - 800000)*16 = 41872

Convert the M6 format ID, 802617 to M3 format:
Dec_to_Hex(802617 - 800000) => Dec_to_Hex(2617) = A39

Convert the M3 format ID, A39 to U format:
Hex_to_Dec(A39)*16 => 2617*16 = 41872

Convert the M3 format ID, A39 to M6 format:
Hex_to_Dec(A39) + 800000 => 2617 + 800000 = 802617

Convert the U format ID, 41872 to M3 format:
Dec_to_Hex(41872/16) => Dec_to_Hex(2617) = A39

Convert the U format ID, 41872 to M6 format:
41872/16 + 800000 = 802617

Type II System Special Status Bits

Type II Smartnet systems use these status bits for special transmissions such as Emergency, Patches, DES/DVP scrambled transmissions, and Multiselects on Motorola Trunking systems. Motorola Trunking radios directly interpret them for their special functions, thus no difference is noticed by the person with the radio. The Trunktracker scanners however interpret these special talkgroup status bits as different talkgroups entirely. Below is the conversion chart for these special status bits.

TTID + #	Usage
ID+0	Normal Talkgroup
ID+1	All Talkgroup
ID+2	Emergency
ID+3	talkgroup patch to another
ID+4	Emergency Patch
ID+5	Emergency multi-group
ID+6	Not assigned
ID+7	Multi-select (initiated by dispatcher)
ID+8	DES Encryption talkgroup
ID+9	DES All Talkgroup
ID+10	DES Emergency
ID+11	DES Talkgroup patch
ID+12	DES Emergency Patch
ID+13	DES Emergency multi-group
ID+14	Not assigned

ID+15 Multi-select DES TG

Therefore, if a user was transmitting a multi-select call on talkgroup 1808, the trunktracker would actually receive those transmissions on 1815. Some common uses of these status bits are as follows:

When a user hits their emergency button, all conversations on the talkgroup revert to the Emergency status talkgroup (ID+2) until the dispatch clears the emergency status. Therefore, if someone hit their emergency button and their radio was on talkgroup 16, all communications would switch to talkgroup 18.
A lot of Fire and EMS departments dispatch tone-outs and alarms as Multi-select communications (ID+7). Therefore, if your fire department dispatch talkgroup is 1616, and they do dispatch tone-outs and alarms as Multi-selects, then those communications will be on talkgroup 1623. This can be a problem, because you will miss communications if you don't have those talkgroups programmed. By setting the Type II block you are monitoring with a fleetmap of S-1 (Mot Size A), you'll essentially get Type I subfleets for each Type II talkgroup - encompassing all of the status bits into one subfleet.

Type I Block Size Codes
These size codes are used for fleet mapping Type I Systems

Motorola	A	B	C	D	E	F	G	H	I	J	K	M	O	Q
Trunktracker	S1	S2	S3	S4	S5	S6	S7	S8	S9	S10	S11	S12	S13	S14
Trunker.exe	A	B	C	D	E	F	G	H	I	J	K	L	M	N

Size Code Parameters

Motorola	TT	Trunker.exe	Fleets	Subfleets	Ids
A	S1	A	128	4	16
B	S2	B	16	8	54
C	S3	C	8	8	128

O	S13	M	1	16	2048
Q	S14	N	1	16	4096

EDACS Trunking Information

EDACS Overview

EDACS was created by General Electric and then further engineered by Ericsson. The EDACS technology has changed numerous owners and now is currently owned by M/A Com.

EDACS is a lot similar to Motorola trunking. It provides for the same features yet has different names for them. Simulcast networks work the same yet EDACS networks, which are similar to AMSS networks, are all independent of each other but still interconnected. A radio is programmed with each system independently and selects each system based on control channel quality. Rather than have a site number a system is basically assigned a simple number to differentiate it.

Motorola uses a specific bandplan or a complicated frequency defined system to assign frequencies. EDACS uses what are called Logical Channel Numbers [LCN]. Rather than assign a frequency with a specific identifier, each frequency at a site is assigned a number between 1 through 21. When a channel announcement occurs it contains only the LCN. With this in mind each radio must be programmed with which frequency corresponds to which LCN.

Digital communications is also available for EDACS systems and exists in two different formats, AEGIS and Pro Voice. AEGIS was the first format introduced and Pro Voice was the last and current format. Neither one is APCO-25 compliant unlike Motorola&#8217;s ASTRO, which is. Also, neither AEGIS nor Pro-Voice can communicate with each other.

EDACS Whitepaper - (PDF Format) - This is an excellent whitepaper written by Com-Net Ericsson regarding how EDACS systems work, EDACS technologies overview, and other technical details of an EDACS infrastructure.

EDACS Talkgroups Conversions

The Uniden EDACS format: (Agency Fleet Subfleet)

Using this example (586 DECIMAL = 04-092 AFS = 24a HEX):

```
(1) 586 decimal = 01001001010 binary  (talkgroups are 11-bit binary)
(2) Split the binary as follows    0100  |  1001  |  010
(3) Convert each group to decimal   04       09       2
(4) Format as 04-092
```

The HEX translation would be:

```
(1) 586 decimal = 01001001010 binary
```

(2) Split binary as   010 | 0100 | 1010
(3) Convert each group to HEX   2   4   a
(4) Write as 24a

The BC245 can do the DECIMAL/AFS conversion internally, and the user can choose either mode of entry and display. So it won't be necessary to do this by hand.

See this link for an Conversion Table to help with these conversions between AFS, DEC and HEX.
See this link for an Excel Spreadsheet to convert talkgroups for you.
(Thanks to tvsjr@sprynet.com)

EDACS Fleet mapping

Establishing a fleet map structure dictates the max number of agency and fleet calls which can be assigned. Within the fleet map structure, the more agencies that are setup, the more agency calls that can be assigned. The same is true for fleet calls. To enhance each agencies flexibility, you can have different fleet and subfleet structures for each agency to suit specific radio communications requirements

A group call is addresses using a Group ID (GID). The GID is composed of 11 bits to define a total of 2048 max groups. The fleet map is structures for each agency to suit their specific requirements.

Maximum of 5 bits to be used for agencies
Minimum of 1 bit to be used for fleets
Minimum of 2 bits to be used for subfleets
Some examples of the possible fleetmaps are shown below (similar to Motorola Fleetmaps)

Agencies	Fleets	Subfleets
2	32	32
2	16	64
2	8	128
2	4	256
4	32	16
8	8	32
8	16	16
16	16	8

The most common fleet map used by EDACS systems is 8 (3 bits) agencies, 16 (4 bits) fleets and 16 (4 bits) subfleets. If we take a couple of examples of group calls, you can easily see how simple the fleet structure really is.

Using a 3/4/4 structure, we can now partition the 11 bit Group ID (GID) as follows:

_ _ _ / _ _ _ / _ _ _ _

Agency Fleet Subfleet

Binary examples are shown below:

Agency 1, Fleet 1, Subfleet 1 (GID 273 Decimal)

0 0 1 / 0 0 0 1 / 0 0 0 1

Agency 1, Fleet 1, Subfleet 15 (GID 287 Decimal)

0 0 1 / 0 0 0 1 / 1 1 1 1

A group call for Agency 1, Fleet 1, Subfleet 0 (GID 272) is a Fleet group call. All subfleets in Agency 1, Fleet 1 will respond to the call. A binary representation is as follows:

0 0 1 / 0 0 0 1 / 0 0 0 0

When an EDACS radio sees the fleet call assignment (GID 272), it immediately associates Subfleet 0 as being a Fleet call for Agency 1, Fleet 1. If the radio's channel selector is on a subfleet within Agency 1, Fleet 1, the radio hears the call.

A group call for Agency 1, Fleet 0, Subfleet 0 (GID 256) represents an Agency Group call. All fleets and subfleets in Agency 1 will respond to the call. A binary representation is as follows:

0 0 1 / 0 0 0 0 / 0 0 0 0

When the radio sees the Fleet call assignment (GID 256), it will immediately associate Fleet 0, Subfleet 0 as being an Agency call for Agency 1. If the radio's channel know is on a subfleet within Agency 1, the radio will automatically hear the call on GID 256.

This type of fleet mapping ensures Agency Fleet calls under failure mode of operation (such if the Site Controller were to fail)

EDACS Misc. Information

A detailed list from Ericsson outlining all agencies and users currently using EDACS systems today. This isn't up to date, but useful non-the-less
On your various EDACS systems TG in the 07f0-07ff (Hex) are patches, either TG-TG or otherwise. This appears to be a standard range for EDACS systems.
GTRAC Homepage - Lots of good information about EDACS systems across the nation
Using Etrunker to monitor your local EDACS system, then make sure you

read this:
All EDACS systems have 25 real LCN channel frequencies, and then an additional six 'status' channels that show up under Etrunk. They are not actual frequencies, but they indicate a certain status message to the calling radio. Here is what I have added to all my EDACS system files.

```
s  DOWNLINK,1a,ffff,0
s  RESERVED,1b,ffff,0
s  CONVERTc,1c,ffff,0
s  QUEUEDid,1d,ffff,0
s  SYS-BUSY,1e,ffff,0
s  DENIEDid,1f,ffff,0
```

I'm not too sure about the first two, but CONVERTc is used to tell a radio who PTTs while there talkgroup is active, and sends them to listen to the talkgroup, giving them an error beep as well. QUEUEDid is where a calling radio will be placed if they are waiting for a next available voice channel or phone patch, etc. SYS-BUSY, means the system is busy, no channels available, and somebody is in the Queue. DENIEDid is if that radio ID is not allowed on the system for some reason.

EDACS Equipment Information

MA/COM Wireless Corp Homepage - The homepage for the MA/Com Wireless Corp, which designs, develops, and implements EDACS systems and technologies.
Racom Inc. - Distributors of Ericsson EDACS equipment. See this link to their products and services page which has detailed information on Ericsson EDACS mobile and portable radios.
Hall Electronics GETECH Page - Lots of detailed information on progamming Com-Net Ericsson Radio equipment here. Cable pin-outs, connections, software versions etc can be found at this page for most of Com-Net Ericsson's radio equipment.

EDACS System Overview

Enhanced Digital Access Communications System (EDACS) is available in VHF, UHF, 800 and 900 frequency bands and wideband (25 kHz) and narrowband (12.5 kHz) configurations. This spectrum resource provided a springboard for the development of trunking systems. Public service radio manufactures working with Associated Public-Safety Communications Officers (APCO) developed a requirements document (APCO 16) for trunked radio systems.

EDACS provides coordinated communication between agencies and integrates all services; Dispatch, Secure Voice, Telephone and Data within a single common communication system. EDACS systems have a single control channel communicating between the system and the field radios. These configurations range from Basic EDACS to EDACS Level 4, consisting of Voted and Simulcast Systems. An EDACS Multisite Network links Systems together via a Multisite Controller (MSC) or Integrated Multisite and Console Controller (IMC).

There are two types of radio channel designations are used in EDACS: One of them is the Control Channel and the other is the Working Channel. The Control Channel is used to send digital data between sites to the radios. This data is continually transmitted to the field units. The Working Channels sends voice and data over the air.

Control Channel
Used for continuous data (full duplex) Inbound and Outbound 9600/4800 bits per second.

Working Channel

Up to 23 per Site
Voice and Data
Data message 9600/4800 bits per second.
Low Speed Data for updating units: Analog Calls 150 Bits per sec, Individual and scan group calls
Units will send 75Hz and 150Hz Trunked Unit Transmitting.

Failsoft Trunking
Control Channel GETC must be reset to bring site out of Failsoft Manual or Remote accomplished.
Failsoft sites can work in Multisite configuration less than .5 second Channel Access.
If NO Working Channel available the Call goes into Queuing an available channel.

Data Rate
Wide Band (25/30) kHz: 9600 baud
Narrow Band (12.5) kHz 4800 baud

Data Synchronization
9600 Baud Rate at 0.1 bit (0.01ms)
150 Baud Rate at 0.01 bit (0.06ms)

Audio Equalization
Amplitude of 0.25 dB (300-3000Hz)
Phase of 25 degrees (600-2600 Hz)

Channel Access
Channel Access Time: Less than 500 ms

Timing and Distance Limitations

Max ISI Time: 52 uS (Allowing for 10 uS of Jitter)
Max Site Separation: 7.8 miles (Without Timing Adjustments)
Velocity of Propagation: 3.0 X 10E8 m/s
9600 Baud Period: 104 uS

Path Requirements

Bell Standard T1 or DS1 Grade Circuits Via: Digital Microwave - Fiber Optic - Phase Stable Analog Multiplex / Microwave

Logical ID

Total Number of Logical Address Schemes: 16,384 (0 to 16,383)
Logical ID uses 14 bits
Used for System Validation
LID 0: Test Unit when making Test Calls
LID < 64 for Host Computers or Mainframe
LID > 100 for Consoles

Group ID

Total Number of Group Address Scheme: 0 to 2048

Physical ID

Each Radio has a Physical ID
20 bits Physical ID
1,048,576 possibilities
ESN

Simulcast

Simultaneous Broadcast by two or more transmitters located at different sites operating on the same RF Frequency. A Simulcast trunked system requires the same number of channels with a common set of RF Frequencies at each site. For this reason, alignment of simulcast systems become very important.

Capture

The ability of an FM Discriminator to lock on the incoming signal: RF Level 1 > RF Level 2 by 12

Overview

LTR stands for "Logical Trunked Radio." LTR systems typically do not have a dedicated control channel. Each repeater has its own controller, and all of these controllers are synchronized together. Even though each controller monitors it's own channel, one of the channel controllers is assigned to be a master that all controllers report to. Each of these controllers sends out a data burst approximately every 10 seconds so that the subscriber units know that the system is there.

This is how you can tell that the system you are listening to is using LTR. On every channel in the system you will hear this data burst, to a scanner user it will sound like a short blip of static like someone keyed up and unkeyed a radio within about 500 msec. This data burst is not sent at the same time by all the channels, but happen randomly throughout all the system channels.

There are two flavors of LTR systems available today:

LTR Regular Systems - typically designed for SMR type operations, business etc
LTR MultiNet Systems - EFJohnson's Multi-Net II system offers a full set of features for the public safety market. These features include the following: an emergency system access switch, the ability to set priority levels, priority queuing, and the ability to operate in the conventional mode if the need arises. All EFJohnson Multi-Net II systems follow the technical guidelines documented in the APCO 16 standard
LTR Talkgroups

LTR Talkgroups are in the following format

105001

Area Home Group
1 05 001

Links to LTR Information

An Introduction to LTR Trunking concepts - an excellent technical overview on how LTR systems work.
Misc

An LTR Data Slicer Circuit. This could be used to develop a LTR decoder in the future. Also in JPG Format here.
The LCN assignment for a 5 channel system is usually 1 5 9 13 17 for trunktracking scanners. This is especially important for the new BC-780XLT Scanner.

TETRA Trunking Information

Overview

TETRA is the new standard for digital trunked radio systems, that is changing the nature of the Professional Mobile Radio business. The standard is defined by ETSI to meet the needs of the most demanding Professional Mobile Radio users in their dynamically evolving environment. TETRA has already captured global attention, following the in footsteps of the GSM standard.

TETRA Facts and Overview - Brief overview and history of the Tetra Digital Trunked Radio Standard

Links to TETRA Information

The TETRA MOU Homepage - this is the web site for the TETRA MOU (Memorandum of Understanding) which is the organization responsible for developing and publishing the TETRA Digital Trunked Radio Standard.

MPT-1327 Overview
MPT 1327 is a industry standard for trunked radio communications networks. It was developed in 1988 by the British Department of Trade and Industry (DTI), and is primarily used in the UK, Europe, South Africa, and Australia.

Systems based on MPT 1327 generally consist of several radio channels. At least one of these channels is defined as the CC (control channel) and all other channels are TCs (traffic channels). Data messages between mobiles and the network are exchanged on the control channel at 1200 bit/s. Each subscriber in an MPT-1327 trunked radio network has a unique call number. It consists of a prefix (3 digits), the fleet number (4 digits) and the subscriber&#8217;s call number within the fleet (2 or 3 digits). After it has been entered the call number will be converted in the mobile to a 20 bit address.

For the duration of his call a subscriber is exclusively allocated a traffic channel from the available trunk.

The different types of communications on an MPT-1327 network and their definitions:

Traffic types:

Mobile-mobile in a cell

Mobile-mobile in different cells
Mobile-line access unit via landline or radio
Mobile-dispatcher station via landline or radio
Mobile-PABX, Mobile-PSTN
Data Communication:

Status messages on the CC (5 bit data length)
Short data messages on the CC (186 bit data length)
Transparent data transmission on the TC (data communication).
Calls:

Point to point connections
Group calls with talk entitlement
Group calls without talk entitlement
Additional MPT-1327 Information on the web
MPT-1327 System Description - Detailed information on MPT-1327 systems at this link

MPT-1327 and TETRA Trunked Radio Systems Info - Information can be found here for these two type of trunking protocols (used mainly in Europe)

MPT-1327 Decoding and Tracking
For MPT-1327/1343 Systems, there is an excellent decoding and monitoring kit available using the FTrunk application - see the following link for more details:

http://www.tbsa.com.au/trunk.html

The WinRadio suite of digital decoding applications also supports the MPT-1327 protocol. Check out the following link for more information on the WinRadio digital decoding suite of products.

Hi Everyone,

I am just getting into amateur radio. I picked up a pair of Icom IC-T7H radios so I could have some way of staying in touch while we ride our dirt bikes or ski. It's seemed to start a bug that I'm not sure where it is going, but that's for a different forum.

My question has to do with the stock antenna that came with the IC-T7H and another after market antenna that I picked up at the store. I don't know what the specs on the stock antenna are. I looked everywhere and can't seem to find a specification of its gain.

Another antenna I picked up is about 6 inches longer than the stock one. It has a gain of 2.15dBi on 8 different bands (including 120/450Mhz). I know enough about radio signals to know that 3dBi is twice the signal.

I ran both radios side by side with different antennas and tuned to various quality signals on both bands. I can't see or hear any noticeable difference in signal quality.

So why then would I want to keep the longer antenna? Will it make a difference in transmitting quality or should I take it back?

Another question.

With which band (VHF/UHF) will I get better range in the mountains or desert? Does it make a difference?

Thank you in advance,

Barry

When the shorter antenna makes for marginal communications, the longer antenna may make the difference in no communications and good communications. When the signal is strong, you won't notice the difference between them. The lower the frequency, the less problems you will have with terrain interfering with your signal. :)

rec.radio.shortwave:8178

Hello, Radio Enthusiast!

Currently, there is an elongated coronal hole in geoeffictive position on the solar disk. This coronoal hole is quite a bit smaller than the coronal hole of last week.

The solar wind speed is currently above 460 km per second, but the Interplanetary Magnetic Field (IMF) currently has a northerly orientation (the "Bz" is positive). There have been brief moments with the Bz going negative (the IMF orientation goes south), so we are seeing the geomagnetic field becoming more active.

Currently the planetary K index (Kp) is 3, down from 4. I am expecting this fluctuation to continue until Monday, with swings between active to minor storm levels.

This ultimately translates to slightly degraded ionospheric conditions, with the maximum usable frequencies (MUFs) just a bit depressed from normal. The highest HF bands suffer under these conditions, and mid-HF openings over high-latitude and polar paths become weaker, and of shorter duration. Again, by Monday, we should start to see conditions settling down and HF propagation becoming excellent. The 10.7-cm flux is above 120, so we'll be seeing nice higher-band HF propagation through the next week.

On VHF, I don't expect strong enough geomagnetic activity to trigger any Auroral-mode propagation. There might be a few periods of sporadic-E (Es) activity, however (we often see a return of Es during December and January). The current 10.7-cm flux is above 120, so I also do not expect any significant F-layer propagation opening on VHF.

Happy Dxing!

73 de Tomas, NW7US (AAR0JA/AAM0EWA)

I have a new in box Motorola M1225 LS 25-40Watt Mobile Unit,
MINT/UNPROGRAMMED. still with mic and clip, hardware, manual, and safe op
manuals. The split is 450-470 UHF. Never programmed. Photos upon request
Model # M44DGC95A2AA
asking $275.00

With whip rubber duckie, Kenwood rapid charger and 1 good battery.
I will sell for $90 shipped CONUS. Photo upon request

Also for sale, cleaning up:

I was given a new RS pro-96 for a present. We do not have digital
here. I am selling it since I already have a BC780XLT. The package
is complete from RS, box, manual, antenna, clip and regulated
external PS. I will sell the package for $475 shipped. POSTAL MO

only.

Also, 1 pair (2) Motorola 2 channel Radius P110 with 1 good battery (new one
costs $30) ,
antennas, 2 chargers.
Model #'s P44QLC20A2AA

Asking $220 for the set OBO

Photos of
all units available. Postal MO preferred. I do not use paypal. I will
consider COD if paid by buyer.

Has anyone in the group had experience with the Bilal Isotron antennas in
the group? For confined space in setting up antennas, is there any others?

Thanx in advance,

Davr

When I went to buy these two Icom IC-T7H's, the guy at the store wanted to charge me $150 (each radio) to convert the radios to transmit in AM. There is a diagram of what I'm talking about on this page:

http://www.mods.dk/mods.php3?radio=icom&model=ic-t7h&selectid=all

(scroll down to 5/5/2002, titled "Transmitting AM with the IC-T7H")

He said it would get better range between the two radios if he did this. Do you know what he was talking about? It makes the radio transmit AM on low power and FM on high power. How would AM on low power extend the range?

Thank you,

Barry

Those do quite well for a "compromise" antenna. They aren't cheap, but do perform well.

General Radio:

(28) 1800-A VTVM:
0-150v AC/DC in 6 ranges (0.5, 1.5, 5, 15, 50 &
150v). Wooden case. Unmod, excellent condx,
w/orignal special power cord. Untested.

1230-A DC Amplifier & Electrometer.
Good phys condx and panel lights work. No one here
knows enough about it to check it out.

(12) 1001-A Signal Generator:
5 khz - 50 mhz in 8 bands, 100mv output, CW/400 hz

modulation. Works good up to about 15 mhz. Tubes
tested OK. Unmodified except "Modulation" control
pot appears to be non-original. Osc section enclosed in oven. Good physical condx, no dents,
gouges, etc. Missing AC cord. Very clean inside.

(13) 605 Signal Generator:
9.5 khz - 30 mhz, with model 605-PL power supply.
Wooden case. Missing tuning dial. Considered to
be parts unit or "hangar queen" to be parted out.

I'm enjoying listening to "Santa" this afternoon. At 19:24 UTC on
18.114 mhz. This is one of the finest services I've witnessed in my
30 plus years of being invlolved in amateur radio. And there has been
a tradition in my home with my children QSO'ing with W6S/"Santa" for a
number of years. W6S/Santa has actually been doing this for 32
years!!

I'm privilaged with perfect propagation this afternoon, so I'm able to
hear the little kids respond to Santa. One of the little peanuts just
said "I love you" out of the blue. I think it took Santa back a bit
and he got a little teary-eyed.

Good stuff. Give's me a little bit of hope for humanity.

73 and Merry Christmas!

Bill - WA8MEA

I can think of no reason an AM signal would go further than an FM one,

especially at lower power. Sounds like the guy was trying to take you
for some extra money. You might want to buy your radios someplace else
in the future.

Stick to FM, and the best way to extend your range would be with some
of the aftermarket antennas available for HTs, or perhaps a
homebrewed, single-band j-pole on your bike.

Have fun...

Bob

The only thought I have for this is that where an FM signal is
reaching beyond its limits it will no longer have full quieting.
Instead there will be a lot of noise in the signal. The AM signal,
though week will be easier to receive because it will not have
the noise present in the carrier that the FM signal has.

No need to squelch on Am!

I have built several of the Ramsey and sorry to say that the other
guys were right. I never was satisfied with any of their performance.
I also have built a couple of the Ten Tec kits and found them to far
superior to the ramsey units.

Just my 2 cents.

Stick to FM.

AM is used in the 119 to 136 MHz range for aviation communications.
Start using that for non-aviation casual communications and expect to
get visits by both the FAA and FCC.

By the way, you can talk farther with SSB.

Benton, W4PE

I can see your point, although when I listen to the AMers on 75
meters, the weak ones do have a lot of static crashes on the signal,
depending on band conditions.

Organization: RoadRunner - Tampa Bay
Xref: archiver1.google.com rec.radio.amateur:6161

FS: Sierra 121-A, tunable VTVM

Freq range: 10khz - 510 khz

Controls:
Attn Steps: -60/.001, -50/.003, -40/.01, -30/.03, -20/.1, -10/.3,
               and 0/1
Input Level: 0/1, +10/3, +20/10, +30/30, +40/100
Injector Sw: CAL & REC
Meter Sw: CAL & REC
IF & AF gains
Headphone jack on front panel
Meter Scales: -10 to +2 db, 0-1v & 0-3v
```

Comes with manual copy and my parts replacement notes.

I got this at a hamfest with intent of using for VLF rcvr. Bought a manual and started replacing parts (leaky caps, out-of-tolerance resistors, etc) even though it was working (having never used one, had no idea if it was working well or not but signal generator punches through). THEN, couple weeks ago picked up a Sierra 128-A (same gadget) at another 'fest and it appears this is the one to keep (rack-mount like rest of my station, solid-state, much larger freq range - DC to about 15 mhz, etc.)

Can send digital pix if desired.

If interested, make a reasonable offer. Buyer pays shipping.
No extra charge to pack up and haul to USPO or UPS. If in central Florida, can deliver (Gainesville to St.Pete)
for gas or beer.

Any questions, contact direct at --
--- pendragon@netsignia.net
--- hvalver/at/hotmail/dot/com
--- rosemarytreftz/at/yahoo/dot/com

or (352) 637-1755

73 Walt (N4GL)

BTW, if anyone reading this has a 128-A and the manual, would like to hear from them re getting a copy.

Here is the mod for the board version I have in case someone else is
ever interested.

"The only modification I show for reducing spurs on the FX146 Rev. 1.3
is to place a 0.001 uF capacitor from TP1 to ground."

I figure if it even works - that is good for me as this was a lesson in
soldering. With what I've learned from the different kits I've been
working on, I'm ready now to tackel my Elecraft K2

The "Aerts Family home-page" has been updated.

Many antique radios have been added to the "Antique Radios" section.

http://www.aerts.nu

Who owns an Alinco DR-110 that can tell me the location of the pot inside to turn up the af gain?

I have an Alinco DR-110 and after I release the key after calling on a repeater, I hear the repeater ID but it sounds "distant" and the repeater is only 15 minutes from my home.

My other radios sound much better and the repeater is loud and clear and so are the persons talking to me.

The sound that I will try to describe sounds like that of when you turn the squelch open and you can hear someone, or the repeater ID, but yet turning up the volume control knob on the front of the radio just makes it even loud and doesn't help the volume of the person you want to hear while they are talking.

Let me know of any site that can help me troubleshoot this problem. I know someone that can go into it with a plastic screwdriver and locate the reason for all of this.

Thank you.

Sean, KD4ADV

Long Island Mobile Amateur Radio Club (LIMARC), is looking for DONATIONS of "Ham" gear, like triband beams, rigs, and towers, to be used for our Emergency Communication Stations, and Field Day.

If you have any old equipment that you're not using anymore, and would like to donate it to our cause, we will make sure that you get a nice letter, for a tax deduction, from our club.
We really need your help, so please try to assist us in any way that you can.

Thanks in advance

Good site

http://www.geckobeach.com/cellular/
http://www.trunkedradio.net/
http://www.genesisworld.com/trunking.htm
http://www.thebriarpatch.org/trunking/
http://home.att.net/~wwhitby/
http://home.att.net/~wwhitby/tx.htm
http://www.lubbockradio.net/
http://www.strongsignals.net/access/boards/trunking/board.cgi

The simplest explanation:

Trunking dynamically assigns pooled frequencies within the electromagnetic spectrum, on an as-needed basis. Assignment of a frequency, or channel, is done via some form of digital signaling. LTR, SmarTrunk, EDACS, MARC-V, MPT, TETRA, iDEN, and traditional Motorola trunking are examples of the types of trunking currently available.

Here&#8217;s an example of Trunking using a real life experience:

Say you need to go to the bank to visit a teller. The bank has fifteen teller windows but this time of the day the traffic is slow so some windows are open, and available for any entering customer, and some busy. As a customer enters the bank he or she simply proceeds to an open window and begins their transaction. Now the day grows later and traffic begins to pick up. Numerous customers enter the bank at a pace quicker than any transaction between a customer and teller so a line, or queue, is created. This type of queue basically works on the principle of first come, first served. In the computer world this is referred to as First In-First Out, or FIFO.

Applying that example to trunking makes the bank the central controller (Because they create the queue and process requests), the teller is the channel (Where communication occurs), and the line is the busy queue.

Another form of trunking, though used in the background, is the modern telephone network (PSTN). The telephone, when idle, does not have a permanent link anywhere but its switch; it&#8217;s only when a called number is available (When CCS is used) that a trunk will be assigned.

In the older days of analog and in-band signaling, as soon as a number was dialed, a path, or trunk, was created. In a nutshell, paths between switches are referred to as trunks. They are assigned on an as-needed basis.

Trunking currently exists within the United States on only the following bands: VHF, UHF, 220, 800, and 900MHz. There are plans to develop another band, specifically for Public Safety, on 700MHz.

More on Motorola trunking and trunking in general:

Most dominant forms of trunking (Motorola or EDACS) use a channel within the system to announce activity. This is referred to as the Control Channel, which is the voice of the Central Controller. The controller listens for inbound traffic on one frequency and retransmits network data via another frequency, typically the frequency&#8217;s offset. For VHF or UHF, further described here, the offset frequency can vary, and may be lower or higher than the base station&#8217;s frequency. For 800MHz the controller listens on the lower frequency (Commonly 806 to 824MHz) with a split of 45MHz. For 900MHz the controller also listens on the lower frequency, with a split of 39Mhz.

Data communication via the control channel uses signaling words. These are simply blocks of 1&#8217;s and 0&#8217;s formatted to the signaling protocol. A signaling word is commonly referred to as either an ISW (Inbound Signaling Word), which is sent from the subscriber, or OSW (Outbound Signaling Word), which is sent by the control channel.

The Central Controller is the primary processor and decision-maker for the network. (Much larger networks, such as SmartZone, use a master controller called the Zone Controller [ZC]. The ZC manages each central controller at each site.) It assigns frequencies based on which are available and in service. It also designates who uses the system and who does not. Each and every type of network has a variety of services available, which the central controller will manage.

To communicate through a trunked network conversations are styled after the old conventional method of radio communication, which involved speaking to a group. In order to coordinate and differentiate, a number is permanently, and in some cases temporarily, assigned to this conversation. This number is called a talkgroup. The talkgroup is simply a group&#8217;s address. Anything addressing the group will be heard by every subscriber associated with that group, regardless of what frequency they are on. Talkgroup calls fall under the category of the Dispatch designation. Equipment usually has designations for the types of calls such as dispatch, individual, or telephone interconnect.

With trunked radio subscribers are unaware of what frequency they are on or their true activity on the system. The radio is responsible for keeping track of where to go and what to do. To identify a specific radio an individual number is associated with that radio, called a radio or individual id. This allows for the controller to allow or reject users based on its subscriber access control database [SAC]. An individual radio id is a lot like a computer network logon name except that each time a subscriber makes a call, or changes channels, its radio id is authenticated, and possibly logged.

Just as a group can be addressed via its talkgroup, a radio can also be specifically addressed. It can either be an administrative feature, such as to shut the radio off (Selective Inhibit) in the event it is lost or stolen, or it can be a call request. A call between individual radios is called a Private Call. A private call is only heard by the individual radios and occurs without the knowledge of any other subscriber on the network.

There is another form of group, which is used to represent a pool of talkgroups. It is commonly referred to as an ATG (All Talkgroup) or MultiGroup. A MultiGroup is created within the SAC and is then associated with specific groups. This is mainly for reference purposes and does not influence how a MultiGroup operates. A MultiGroup is more for subscriber use. When a radio is programmed a personality is created with a list of talkgroups, fifteen total. This personality can then be assigned one MultiGroup. When the subscriber selects the MultiGroup they will hear traffic for whichever talkgroup is associated with that MultiGroup via its programming. If a subscriber transmits on the MultiGroup, the call goes out on that talkgroup id but is marked as a MultiGroup. The receiving radios are constantly scanning the control channel for their associated talkgroups and the MultiGroup associated with them. The radio is simply the device which makes the MultiGroup function properly.

In addition to calling a group of people or an individual radio, a link to a landline can be created. A properly programmed and enabled radio can hit a button or navigate a menu to initiate a telephone call to the outside world.

A party via landline may also call an individual radio or talkgroup. The calling party will be prompted for a form of identification for the group or radio, and then routed to their destination.

Subscriber radios can also send pages to other subscriber radios. This feature is called Call Alert. A subscriber simply selects, or manually enters a radio id, and presses their PTT button. If the target radio is currently monitoring the control channel it will alert the subscriber through an on-screen icon or by a repeating tone, similar to a pager. Call Alerts only occur over the control channel and use very little resources.

When a talkgroup needs to be temporarily assigned for a specific event, or to wrangle specific radios together, radios are dynamically regrouped. Initial programming of the radio should provide a mode specifically for dynamic regrouping. This mode is typically empty and will give a warning tone if a subscriber selects it. Once the radio receives the dynamic regroup command will that mode be populated with a talkgroup id.

In addition to temporarily creating a group a subscriber radio may be sent a command referred to as selector lock. Selector lock pushes radios over to the dynamic regroup channel and locks them there. Any mode change by the subscriber will not move them off that mode.

More sophisticated networks will have consoles attached to them. The console is what a dispatcher uses to access talkgroups on the network, in addition they can access conventional equipment if needed. Consoles are connected to the network via a direct link giving them direct access to resources. Consoles have the option to monitor multiple talkgroups at the same time. Talkgroups are seen on a dispatcher&#8217;s screen as icons. The icon shows the alias name and the last radio id that transmitted on that talkgroup.

The software, which consoles operate with, is called Radio Dispatch Management [RDM]. RDM allows the dispatcher to perform their normal dispatching plus issue commands such as patching of talkgroups, private calling subscribers, issuing a temporarily broadcast to multiple talkgroups called a MultiSelect, dynamically regrouping radios, and other various administrative commands.

As previously mentioned, when a dispatcher would like to link multiple talkgroups together they create a patch. There are two ways a patch may operate, the first is resource intensive and involves placing a call to each individual talkgroup tying up many frequencies. This is only used when older radios are used on the system that cannot recognize the newer form of patching. The second, and newer method, involves placing one call, using one frequency, and allows the subscriber radio to do the work. A command is sent out over the control channel announcing a patch has occurred. There are multiple announcements, which the radio will link together. The initial group where the patch was initiated on is called the SuperGroup and is identified in each announcement.

Another form of patching, yet really not a patch, is a MultiSelect [MSEL]. MultiSelect is used by the Dispatcher to broadcast a message to multiple talkgroups but without the need for subscribers to reply. With patching, the patch is up for however long the Dispatcher would like it to be. A MultiSelect only lasts for as long as the Dispatcher makes the call. A MultiSelect announcement may operate in two forms, similar to patching.

Along with consoles, a CAD (Computer Aided Dispatch) system can be integrated into the network. A feature of trunked radio allows a subscriber radio to update the CAD with their current status. Either Status or Messaging is enabled within the radio, then assigned an alias as to which status button determines which action. When an officer arrives on-scene he can simply push a button on the radio, which would in turn send the message in via the control channel. The controller would then receive it and notify the CAD with the officer&#8217;s status. With conventional radio MDC-1200 was used for status messaging. The purpose for both is essentially the same.

Considering all conversations are virtual, and not strapped to any physical channel, the system may be upgraded or downgraded based on operator needs. A radio simply needs to know the control channels (Up to four per site), its radio id, and the talkgroup it is allowed to access. Everything else within the system is available to be changed as needed.

Most common networks will have four to twenty-eight channels available for trunking. With networks such as SmartZone you can have a single channel site which uses Voice On Control [VOC]. VOC allows the Control Channel to momentarily become a voice channel. VOC is only used for low traffic sites. EDACS has a similar feature called SCAT. It operates in essentially the same manner.

A typical single site system is made up of a cabinet and multiple repeaters, which are all linked via RS-232C. The cabinet itself is where all the action happens. There are several cards which are responsible for processing inbound subscriber requests, channel status, control channel format and selecting the proper control channel, and the actual processor. Adding features like encryption or telephone interconnect adds additional hardware. Each voice channel in the network must specifically be equipped for telephone interconnect or encryption. Whether the controller is Privacy Plus or SmartNet, it&#8217;s all simply firmware.

Once Wide Area Coverage is needed the site can be upgraded to Simulcast. A Simulcast network has multiple sites operating on the same frequencies. With Motorola networks you are limited to a total of ten sites in the subnetwork. Out of the ten there will be one designated as the prime site. All site audio from your satellite sites will be routed to this site. Each site will have a voting receiver except the prime site, which will have both a voting receiver and comparator.

Simulcast works on a simple principle of broadcasting the same traffic at each site. In order for a clean signal, and to prevent multicasting (Where two signals mix together deconstructively), you must provide a reference clock. This makes sure each site transmits a frequency at the exact or near the same time (Making the waveforms identical). Typically GPS time is used as the reference and fed to the oscillator, which produces the pulse train used as a clock. In lower budget system a simple frequency generator is used.

Simulcast works in cooperation with Receiver Voting. This is where the prime site comes into play. When each satellite site forwards its audio to the prime site, the prime site&#8217;s comparator compares or votes which site has the best audio, then resends it to every site to be rebroadcasted. The principles of Simulcast and stand-alone Receiver Voting are used in the same manner as in conventional radio. Configuration of Simulcast networks is highly involved and well beyond the scope of this document.

When sites are not properly timed a whining or echo effect can be heard. This can often be heard on the Control Channel without much difficulty.

SpectraTAC, DigiTAC, and ASTROTAC are all forms of receiver voting systems. The TAC in the product name stands for Total Area Coverage. Each one of these receivers supports specific audio types because the receiver must know how to differentiate signal quality for each transmission type.

SpectraTAC is used for analog voice networks. DigiTAC is used for both analog and 12kbit encryption. It never does decode the encryption; it simply keeps the timing correct so the output encryption transmission can be properly decrypted. ASTROTAC supports all the former in addition to ASTRO digital modulation. Each receiver type is available for either conventional or trunked communication networks. A good way to identify each type of receiver is the soft clicking at the end of the conversation. SpectraTAC networks have the most distinguishable sound.

In the event frequency reuse is not available due to picky frequency coordination, AMSS (Automatic Multiple Site Selection) or SmartZone can be used. AMSS does not seem to be installed anymore, though there are a few systems still being operated. Motorola may no longer market it due to SmartZone being the most profitable.

With AMSS each individual site is seen as an independent site and given its own external site number. Each site has its own central controller, though it operates in a remote configuration. Each controller is essentially connected to each other and cannot operate independently. A site can have any number of channels based on the needs of the network. One thing to keep in mind with these types of systems is how to handle sites that do not have an equal amount of channels. If one site has five channels, and is currently busy, yet another site has ten channels, and a subscriber wishes to talk on a group not currently in progress, you must choose how this is handled. You can either allow the call to be granted, which busy sites will miss, or you can have the call put into the busy queue while it waits for the other site(s) to become available.

There were no specific features available with AMSS. [Correct me if I am wrong.]

Moving up the network ladder we encounter SmartZone. SmartZone basically networks together all the trunked systems we have discussed so far including conventional repeaters. A SmartZone network is a network of multiple trunked systems, which are all linked together and controlled by a central point. As mentioned before, this central point is the Zone Controller.

SmartZone introduces a whole new slew of equipment. One significant piece of equipment is the Ambassador Electronics Bank [AEB]. The AEB is basically a switch. After the ZC determines which sites need which audio it instructs the AEB to open audio paths to each site.

Along with SmartZone came ASTRO. ASTRO is simply Motorola&#8217;s form of digital voice transmission and the features that can be provided by it. Keep in mind ASTRO is not restricted to SmartZone. A single site or Simulcast network can use ASTRO as long as each station is, of course, a Quantar, and particular conditions are met. The backplane of the Central Controller&#8217;s cabinet is limited to a certain extent. An example of a limitation is the number of Simulcast sites.

With ASTRO and single site networks they must be configured with or without consoles, or with or without Simulcast. If you use Simulcast or Receiver Voting you cannot support consoles. If you want to allow for consoles you cannot Simulcast the network.

Back to SmartZone&#8230; Another new product, which became available with SmartZone, was the IntelliRepeater [IR]. An IR is simply a hopped up Quantar that can perform the role of a central controller.

Traditional sites used a controller that utilized the 6809 microprocessor. With the IR, firmware enables the station to become a bare bones central controller. Considering this situation a site in a SmartZone network can either be an IR or a 6809 site. Note: IR sites do not support Simulcast. Also, VOC may or may not be limited to IR sites.

There are limits to the number of sites that are available on the network. The Zone Controller backplane has a total of sixty-four ports that can support a few different type of connections. They can be consoles, sites, business exchanges, etc. Most SmartZone networks will have consoles included in the network so the number of ports available for sites becomes reduced. Communication is via RS-232C I believe.

With the introduction of encryption, or ASTRO, to a SmartZone network very minimal hardware is needed unless consoles are to be used. Consoles have a wireline link to the SmartZone network and are simply routed audio directly from the site where it is received. Considering the network never decodes and demodulates the voice traffic extra hardware must be introduced to perform that feature for the console. For ASTRO decoding a DIU (Digital Interface Unit) is used. For analog 12kbit encryption, a CIU (Console Interface Unit) is used. (DIUs or CIUs were purely designed for consoles and communicate through a non-publicly documented protocol. You cannot simply purchase one to decrypt encryption, even if you have the key, or decode ASTRO traffic.)

Much of a SmartZone network is multiplexed. To mux and demux you use CEBs (Central Electronics Bank) and DBLs (Data Broadcast Link). Consoles are connected via CEBs. [Can anyone provide more info on CEBs or DBLs?]

For support of telephone interconnection the Motorola Business Exchange must be used for interfacing with a PBX or the PSTN.

There are a host of features that are available with SmartZone, some which are covered on another page. Otherwise, SmartZone networks are highly configurable and can accomplish most any organization&#8217;s needs. Now if only certain administrators could figure out how to properly run them and maintain them. The SmartZone System Administrator&#8217;s User Manual is nearly four inches thick, though a good read.

When you need an even larger coverage area, and larger site capacity, SmartZone OmniLink is utilized. OmniLink is an extension of SmartZone. It adds support for interconnecting up to three (Or is it four?) ZCs. In addition, there is the need to support roaming, where a radio from one zone roams onto another zone. Being each ZC has its own database of users and talkgroups there must be some form of communication and arrangement between ZCs. OmniLink supports up to 192 sites.

EDACS:

EDACS was created by General Electric and then further engineered by Ericsson. The EDACS technology has changed numerous owners and now is currently owned by M/A Com.

EDACS is a lot similar to Motorola trunking. It provides for the same features yet has different names for them. Simulcast networks work the same yet EDACS networks, which are similar to AMSS networks, are all independent of each other but still interconnected. A radio is programmed with each system independently and selects each system based on control channel quality. Rather than have a site number a system is basically assigned a simple number to differentiate it.

Motorola uses a specific bandplan or a complicated frequency defined system to assign frequencies. EDACS uses what are called Logical Channel Numbers [LCN]. Rather than assign a frequency with a specific identifier, each frequency at a site is assigned a number between 1 through 21. When a channel announcement occurs it contains only the LCN. With this in mind each radio must be programmed with which frequency corresponds to which LCN.

Digital communications is also available but exists in two formats, AEGIS and Pro Voice. AEGIS was the first format introduced and Pro Voice was the last and current format. Neither one is APCO-25 compliant unlike Motorola&#8217;s ASTRO, which is. Also, neither AEGIS nor Pro-Voice can communicate with each other.

LTR:

LTR, or Logic Trunked Radio, uses subaudible data that is superimposed on each channel whether it is in service or idle. Each channel in the network is configured with a logical channel number. Information about activity and availability of resources is sent over the subaudible stream. Older LTR systems were easily identified by a short keyup on the transmitter. That use, which I believe was used to announce the network, is no longer needed so you may not hear it. Currently, a &#8216;chuff&#8217; sound, which is heard when a subscriber keys up, is your best method for identifying LTR.

With LTR a subscriber is assigned a home repeater and will use that repeater unless it is not available. He or she will then move to the next repeater in line. Only group communication or telephone interconnect are available. Radios are not assigned individual ids. If the need for a one-to-one conversation is needed a group is created and only programmed into a field unit and the base radio, which would have everyone&#8217;s specific group id.

LTR is a signaling format that is licensed to multiple communications manufacturers allowing them to produce both their own fixed end equipment and subscriber radios. The signaling protocol is not openly available for anyone to use unless granted permission.

EF Johnson, who was bought by Transcrypt International, developed LTR. Due to the lack of features available to LTR it is strictly used by commercial entities. This limitation brought the creation of MultiNet. MultiNet still uses the subaudible data to perform signaling yet dedicates one channel in the system as a source for a constant stream of subaudible data, similar to a control channel for a Motorola network. MultiNet adds features that were required by the APCO-16 standard, created for and by Public Safety organizations. See here for a list of what those are.

I believe SmarTrunk uses a technology similar to LTR.

iDEN:

As the radio frequency spectrum became more crowded the FCC encouraged trunked system operators on the 800MHz band to switch to digital modulation as frequencies could be spaced closer together. Eventually they would be required to go digital. Being the networks would be too costly to upgrade to digital, plus digital subscriber radio prices are outrageous, system operators sold their networks to a company called NexTel.

Many of the original analog trunked networks were Privacy Plus. These were simple networks to operate and had full support for Type I trunking. Type I trunking was the cheapest to operate so most all commercial trunked radio networks (SMRs) used Type I.

Being Privacy Plus was not digital ready, though still a huge success, a new type of network was created. It was called iDEN (Integrated Digital Enhanced Network). iDEN is essentially a digital trunked radio network that supports all of the same features available to Motorola&#8217;s older style of trunking, though more oriented toward businesses.

NexTel&#8217;s vision was to take the place of all the old SMRs but use iDEN trunking as it met the FCC&#8217;s requirements. By buying out analog networks NexTel acquired the frequencies they needed to support their network infrastructure. As they built their network analog networks were slowly shutdown, leaving many businesses stranded. These businesses had a cheap form of communication and all of a sudden they lost it. They now could find some other means of communicating or subscribe to the costly NexTel. Many chose to subscribe to NexTel without investigating their options. (There still are analog trunked systems in operation; they&#8217;re just on 900Mhz or UHF using LTR.)

iDEN also uses a dedicated control channel. The difference between iDEN and other forms of trunking is the use of TDMA (Time Division Multiple Access) to multiplex conversation onto one frequency. The type of digital voice encoding used by NexTel is VSELP. Digital modulation uses a form of QAM. (VSELP was the earlier form of ASTRO. IMBE is now the current vocoding scheme used by ASTRO.)

Group calls, individual calls, and telephone interconnect are all available just as with normal trunking. NexTel refers to their individual calling feature as Direct Connect. This is the dominant communication form with NexTel as it is the cheapest and easiest to use. (Most businesses only need to communicate directly with one employee anyway.) With NexTel, group calling creates an additional charge for every radio that receives the call. Group calls do not strain the network any more than an individual call so the cost is really not needed. NexTel just found a way to take more money from the customer. Telephone calls are fully duplex in nature. (All of the former systems use half-duplex requiring one person to speak at a time.)

NexTel networks still, in fact, use a 25kHz bandwidth just as the older analog networks did. They obviously aren&#8217;t too concerned with trying to be efficient, and setting an example, by going to narrowband technology. NexTel is truly a company who is only concerned with itself and its profit margin.

Within the last year a company called ARINC, which manages most airport operations, has chosen to convert their Motorola Type I trunked networks to iDEN networks. Other than a few other small networks, iDEN is not widely used.

MPT-1327:

MPT-1327 is an open standard of trunking, versus iDEN, which is proprietary, and was developed in the UK. Any manufacturer can produce their own equipment based on this standard without the need for permission or licensing. This type of network is more oriented toward commercial and industrial sectors. It is most widely used in Europe and Australia, though, has been found occasionally in the United States.

MPT is a network using analog communications. There is a dedicated control channel just as in the other forms of trunking. MPT is a lot like the standard Motorola trunked networks. Many of the features of Motorola trunking, which SmartZone provides for example, exist within MPT networks. MPT networks are highly customizable are cheap in price. Along with voice, data can also been sent over the network.

TETRA:

TETRA (TErrestrial Trunked RAdio) is similar to MPT in that it is a protocol that is an open standard. The difference between them is TETRA is a fully digital system.

It uses a dedicated control channel and utilizes TDMA on its traffic channels. There is a 4:1 call to frequency relationship. Considering the channel is completely digital both voice and data can be sent at the same time. IP packet data is supported. TETRA is in use primarily outside of North America.

See the TETRA website for more information: http://www.tetramou.com/

The relationship between Type I, II, and IIi protocols

Type I:
When Motorola first introduced trunking back in the early 1970's the method used for grouping radios into multigroups and talkgroups was called Type I. The way Type I works shows the developers must have been on acid, or some narcotic, as the way it works can be quite complicated, especially when trying to determine sizecodes in an unknown environment. They developed sizecodes to take the OSW address portion and divide it up appropriately based on the number of fleets, sub-fleets, and radios needed by the customer. There are a total of fourteen different sizecodes with each one dividing up the 16 bits accordingly. Below is a chart representing the sizecodes and their properties.
First, one of the building blocks for organizing activity on a system such as ASTRO or analog, talkgroups, radio ids, and sizecodes is a partition (Commonly referred to as a Block or System Prefix). I tend to use partition for both Block and the sizecode weight. In default conditions there are a total of eight partitions. With Type I you are bound to eight. Most of the sizecodes can be assigned to any partition

but three cannot be because they are weighted differently. Sizecodes A through K are all weighted as one. What this means is they only take up one partition. Sizecode M is weighted as two, meaning it will take up two partitions. Sizecode O is weighted 4, and sizecode Q is weighted 8. As you may have noticed sizecode Q takes up the whole fleet map. All eight partitions together in a Type I environment are referred to as a fleet map.

Type I Sizecodes

A	aaabbbbbbbccdddd	8 Partitions, 128 Fleets, 3 Subs, 16 Radios
B	aaabbbbcccdddddd	8 Partitions, 16 Fleets, 7 Subs, 64 Radios
C	aaabbbcccddddddd	8 Partitions, 8 Fleets, 7 Subs, 128 Radios
D	aaaccccddddddddd	8 Partitions, 1 Fleet, 15 Subs, 512 Radios
E	aaabbbbbbccddddd	8 Partitions, 64 Fleets, 3 Subs, 32 Radios
F	aaabbbbbcccddddd	8 Partitions, 32 Fleets, 7 Subs, 32 Radios
G	aaabbbbbccdddddd	8 Partitions, 32 Fleets, 3 Subs, 64 Radios
H	aaabbbbccddddddd	8 Partitions, 16 Fleets, 3 Subs, 128 Radios
I	aaabbbccdddddddd	8 Partitions, 8 Fleets, 3 Subs, 256 Radios
J	aaabbcccdddddddd	8 Partitions, 4 Fleets, 7 Subs, 256 Radios
K	aaabccccdddddddd	8 Partitions, 2 Fleets, 15 Subs, 256 Radios
M	aaccccdddddddddd	4 Partitions, 1 Fleets, 15 Subs, 1024 Radios
O	accccddddddddddd	2 Partitions, 1 Fleets, 15 Subs, 2048 Radios
Q	ccccdddddddddddd	1 Partitions, 1 Fleets, 15 Subs, 4096 Radios

Note: Certain sizecodes which have only one fleet will represent it as zero in final formatting.

The Motorola standard fleet map is AABBCCDD.

Partitions and how they are commonly divided

	Decimal	Hex [2]
0	0 - 8191 [1]	0000 - 1FFF [1]
1	8192 - 16383	2000 - 3FFF
2	16384 - 24575	4000 - 5FFF
3	24576 - 32767	6000 - 7FFF
4	32768 - 40959	8000 - 9FFF
5	40960 - 49151	A000 - BFFF
6	49152 - 57343	C000 - DFFF
7	57344 - 65535 [1]	E000 - FFFF [1]

Note 1: The first and last partitions contain one value which is reserved by the system. For partition 0 it is zero. For partition 7 it is $FFFF or 65535. A Type II radio id can be neither one of these values.

Note 2: For Type II talkgroups there is actually 4 bits which are appended, this is called the T-bit and specifies call type (See below). For example, partition 3 would actually be $600 - $7FF or partition 6 would be $C00 - $DFF.

When a Type I call takes place it is represented by a single OSW. As mentioned in "In Depth Control Channel operation" an OSW is comprised of 10 bits, which represent the command or opcode, 1 bit for Group or Individual direction, and 16 bits for the address. For a Type I call the opcode is the channel assignment (Represented by a hex code), the direction is Group, and the address contains the partition/fleet/sub/radio combination. The radio, once it receives this OSW, uses its programming to make sense of the address based on the sizecode. Those 16 bits are divided up according to the first table above.

For example, we see the OSW: 13F 1 4F32

13F is the channel assignment for 858.9875

1 designates the OSW as directed toward a Group or Everyone (0 represents Individual or Background)

4F32 is the raw value which the sizecode is applied to

Lets apply a sizecode and see what we get. We'll use the sizecode E.

First convert 4F32 to binary: 0100111100110010

Now apply sizecode E: 010-011110-01-10010

We will now convert each section to decimal:

010 = Partition = 2

011110 = Fleet = 30

01 = Sub-fleet = 1 (Also considered 'A')

10010 = Radio ID = 18

Put those together and you have 230-1 with a radio id of 18. The partition and fleet are a combination of numbers. It is not actually two hundred thirty, it is two-thirty.

Keep in mind that a sub-fleet of 0 (zero) is restricted to fleet-wide communications. When programming a radio you may see a number or a letter designating the sub-fleet but the fleet-wide sub-fleet will ways say fleet-wide in some form. This transmission would be heard by every radio on any sub-fleet on that fleet. Fleet-wide is akin to a multigroup call though slightly different. When using a TrunkTracker you should not hear normal conversations on a fleet-wide id; if you do, the sizecode is incorrect. Also, a radio id can be zero. For example, when I say 64 total radios I mean an assignment between 0 and 63.

Type I trunking is restricted to 800MHz.

Type II:

Later on there came the need for more groups and more radios but without the size restrictions. Type I was flexible but you were limited to the restrictions of the sizecode, plus the management of multiple radios needing access to other sub-fleets was a nightmare to manage. Simply, administration of all users was difficult. The answer was the Type II protocol. With the addition of new code (signaling words) you no longer needed to define fleets or sub-fleets. You simply created a talkgroup and a radio id. In addition, you could modify your fleet map to have a partition as Type II (Sometimes seen as sizecode X). When you mix Type I and Type II together the system is referred to as hybrid.

In the beginning of Type II, memory limitations of the hardware did not permit you to use over 4,096 talkgroups or radio ids. You could assign a radio id or talkgroup anywhere within that range but the database of all groups or subscribers couldn't exceed a certain amount. Most modern systems, especially SmartZone, do not limit you.

With Type II the call was given four bits appended to its talkgroup called the t-bit. The t-bit signifies the type of call such as Multiselect, Normal, Emergency, Encryption, or Multigroup. Now, when a Type II call was made, a dual OSW confirming call grant was sent, followed by the late entry OSW. The late entry is similar to the Type I single OSW. Here is an example:

308 1 3F01   The opcode $308 designates this OSW as the first of a

dual OSW. The address $3F01 is the Radio ID.
26C 1 2210   The opcode $26C represents frequency 866.5125. The address $2210 is the talkgroup with t-bit.
Regarding t-bits... Our actual talkgroup above is $221. The t-bit is 0 designating a normal call. Here are all possible t-bits:

$0	Normal Group Call	$8	Encrypted Group Call
$1	Multigroup Call	$9	Encrypted Multigroup Call
$2	Emergency Call	$A	Encrypted Emergency Call
$3	Patched Call	$B	Encrypted Patched Call
$4	Emergency Patched Call	$C	Encrypted Emergency Patched Call
$5	Emergency Multigroup Call	$D	Encrypted Emergency Multigroup Call
$6	Not Assigned	$E	Not Assigned
$7	Multiselect	$F	Encrypted Multiselect

Type IIi:
What happens if you originally had a Type I system but wanted to migrate over to Type II without seriously interrupting service? The answer came as Type IIi. Type IIi allows for a radio to be assigned a Type II radio id, be administered as a Type II radio, yet operate on a Type I fleet and sub-fleet as though it were a normal radio. The radio could switch between Type I fleets and Type II talkgroups, and continue to keep the same radio id. Now you can use administrative functions such as Selective Inhibit or Dynamic Regrouping without concern.
Type IIi uses a dual OSW. The first word contains the radio id and the second word contains the partition/fleet/sub combination but with the radio id portion nulled (Zeroed) out. Here's an example:
We'll use part of some past examples; radio id $3F01, sizecode E, and a fleet/sub of 230-1.
309 G 3F01   The opcode $309 designates the call as a IIi call. The address is the radio id $3F01.
26C G 4F20   Again, $26C is the frequency and the address is the partition/fleet/sub combination.
Notice the difference with the second address from the earlier example? Earlier we had $4F32 because it included the radio id. Now we have $4F20 because the section for the radio id has been nulled out with zeros. In addition, the late entry will contain $4F20. All IIi calls no matter what sizecode used will always have the radio id portion nulled out. Because of this method it is often easy to figure out the sizecode by using a few raw values and placing them against the sizecode table.

Message, Transmission, and PTT-ID are methods for placing calls.

Message Trunking:
Message trunking is the earliest form of call signaling with its roots in Type I trunking. When message trunking is used the station will hold for a period of time after the subscriber unkeys their microphone. This period between unkeying, and when the station actually drops the call, is called hangtime. [I believe the default hangtime is half a second.] During this time the system still reserves the station for the previous group, private, or data call. At the end

of the hangtime the disconnect tone is sent causing all radios to return to the control channel.
One problem with Message trunking is with subscriber replies. During this hangtime a subscriber, no matter whether they are a valid or invalid subscriber, can make a call. This allows for malicious use of the system.

Transmission Trunking:
Transmission trunking differs from Message in that there is no hangtime. Once the subscriber unkeys their mic the station drops the call and all radios return to the control channel. This makes for the most efficient use of channels within the system.

PTT-ID Trunking:
PTT-ID trunking is built upon message trunking yet fixes the problem of authentication for replying subscribers. Any time a subscriber wishes to reply to a call in progress or in hangtime it must send its information in to the control channel first before it can make the call. Once the replying subscriber is given a call grant he or she can continue their call. This maintains a totally closed system based on the SAC database.

What are the differences between high and low speed signaling?
The simple answer is, the baud rate.

Low speed signaling:
In the beginning of trunking when Type I was the only protocol, low speed signaling was used. All digital signaling was done at low baud rates when accessing the control channel and operating on the voice channel. I believe the baud rate was between 100 and 200 baud. In addition, if you listen to the input of the control channel for the low speed ISW you'll here this honk for about one second.

High speed signaling:
When Type II was introduced I believe high speed signaling was also introduced. Interaction with the control channel operated at the same speeds at which the control channel operated, 3600 baud. If you tune a receiver to the input of the control channel and key up a radio you will hear the familiar sound of the control channel for a split second as the radio sends in its ISW.
High speed signaling is, of course, the best to use because more data can be transferred. Though if the system still uses old Type I radios you must maintain make sure to use the proper signaling rate.

How does a trunked radio actually operate on a network?

First, lets start with what happens when a radio is first powered up. As soon as the radio is powered up it scans its list of preprogrammed control channels. If the system is not SmartZone or AMSS then there is a maximum of four control channels (Each site is limited to only four control channels anyway). If AMSS, the maximum is eight, and if SmartZone, the maximum is thirty-two. [I've been told IntelliRepeater

sites can have any station act as a control channel, regardless IRs are only used within SmartZone networks and I have yet to see more than four defined. I'm guessing it may occur if all four malfunction.]
Once the control channel is found it will affiliate, but, this depends on whether the radio is programmed to identify on PTT (PTT-ID), or to auto-affiliate. [SmartZone radios will auto-affiliate by default because this is needed for proper site assignment.] It then begins looking for its radio id, its current talkgroup, any talkgroups within the scan list, and the multigroup if one is programmed in. In addition, newer model radios scan for the system id to make sure the radio id is on the proper system. If the radio affiliates to the system, then realizes it is on the wrong system, it will send this error to the control channel, which will echo it out on the outbound side. The radio then will no longer operate on the system (And display Out of Area if equipped). In areas where propagation is good and surrounding areas may use similar control channels (it happens) you will see the error frequently.

One note regarding SmartZone radios:

If the radio is a SmartZone radio it will also look for certain information in the background data sent over the control channel. This includes certain timeout values, connect tones, adjacent site announcements, and alternate control channels. The adjacent site information contains capabilities for the adjacent site, its current control channel, and the site number. There is a maximum of seven adjacent sites to be defined. Each one of these adjacent sites has its control channel sampled by the decoding radio to determine if the radio should switch sites or not. If the radio is a SmartZone OmniLink radio it will do all of the above plus receive an alias name for the current site.

SmartZone OmniLink radios can operate on different system ids permitting the system id is included within the adjacent site announcement. If it does switch to the other system id it must be granted approval to roam. The system id is basically considered to be the Zone in a SmartZone OmniLink network. Each Zone has its own Zone Controller with its separate SAC database. When a radio does switch zones it is referred to as trespassing. The current site sends out a site background word specifying if it allows trespassing or not.

Auto-affiliation is preferred because it allows the system manager to properly administer the system. He or she, or anyone who has access to query radio status, will know when that radio is within the network. They will know when it affiliated and to what group. If the network is SmartZone, they will also know what site it affiliated to. Another benefit is when the subscriber chooses to transmit, the radio will only send in its radio id. This allows for faster channel access. If the radio is programmed to only identify on PTT then the talkgroup must be included, I believe, every time. In addition to auto-affiliation, transmission or PTT-ID trunking must also be programmed into the radio so that proper channel access is controlled.

Now our radio is passively watching the OSWs fly by. If it sees a group it is monitoring it will convert the channel hex id to frequency and tune its receiver to that frequency (Trunked radios do not use dual receivers!). Once it arrives on this voice frequency it will look for the proper sub-audible data sent over the voice channel to insure

it is on the correct frequency then unmute and pass audio.
Once we wish to place a call, we depress the PTT button, which in turn transmits an ISW containing the talkgroup and radio id (Or just the radio id) on the control channel's input frequency. After transmitting the radio goes back to the control channel (Or rescans if the control channel changed for some reason, which can happen due to a fault) and looks for the call grant. The call grant contains the radio's id and the talkgroup. It then will switch frequencies to the voice channel and begin transmitting. While it transmits it continuously sends in sub-audible data as the connect tone. [I'm not sure but the connect tone may be used for control channel access also.]
If the subscriber's radio has an invalid radio id, the talkgroup or radio id is not allowed at the current site, or has performed an illegal operation, the control channel will notify it on the outbound side. The radio will then tend to emit a bonk, or busy tone, to say "Bad Subscriber!"
When the subscriber has finished talking it will stop transmitting and wait for the disconnect tone on the voice channel's output frequency. Once it receives the disconnect tone it will return to the control channel and enter its passive state.

In depth Control Channel operation

[At this time I'm going to skip how the raw bits sent over the control channel are assembled and error checked as it really isn't necessary.]

All data transmission, or signaling, occurs at 3600 baud. [Note: This is not bits per second (bps), it is cycles per second. A cycle would be one full wave.] Considering everything is represented by bits, or digital information, it makes the trunked system digital. Many people will argue what makes a system digital or not. Every Motorola system is digital in that all signaling occurs digitally whether it is sent at a slow rate or a high speed rate.
The structure of the 3600 baud control channel, be it an outbound signaling word (OSW) or an inbound signaling word (ISW), consists of 27 bits. These bits are further divided up into 10 bits for the command, or opcode, 1 bit for direction, and 16 for the address. With all bits as 1 the signaling word would look like 3FF 1 FFFF. Commonly the direction bit is shown as I (0) or G (1).
First, I'm going to concentrate on outbound signaling words as they are more relevant. In most cases you would look at the OSWs for improper system operation. Problems can occur on the ISW side but can be easily narrowed down to a subscriber's radio.
Motorola trunking through the years has changed frequently. The early systems barely sent out any information. You typically saw a single OSW for the system id and possibly system background information. The rest would be idle OSWs used to fill time slots. As the systems evolved the system background OSWs became commonplace with two forms to contain two different types of information [In the beginning there was only one]. These OSWs used the address portion of the OSW to mostly represent true/false statements. "Yes" or "No" the system is capable of said specific function. Eventually a Scan Marker was introduced for Priority Monitor.

The history of the System ID:

The first system id was a single word and consisted of a command, which represented the control channel, and an address, which used a strange representation of the system id. A specific range was taken by the system and could not appear in any way. This would include radio id or talkgroup for example. This range was $1FC0 to $1FFF. Those familiar with assigning radio ids and talkgroups for an 800MHz system may recall that you are not allowed to assign anything in that range ($1FC to $1FF for a talkgroup). Though with trunking in other bands you are allowed to.

The system id looked like [And in some cases still does]: 14F G 1FCB

The way the system id was represented was by taking the two rightmost digits of the system id and then adding them to $1FC0. So if a system id was $4032 it was sent out as $1FF2 ($C0 + $32). The radios, which when programmed, only concerned themselves with the two digits and knew how to calculate correctly.

This also in turn put a restriction on system id number assignment. Being the system id is represented in hex the second digit from the right could not be larger than 3 as it would cause the system id to fall out of the $1FC0-$1FFF range. [Note: Recently new systems outside of 800MHz are showing up with system ids which break that rule as it is possible since trunking in the other bands always used the full system id for identification over the control channel.]

Later the system id was changed to a dual OSW to represent the full system id.

```
It now looks like this:    308 G 2723    System id is in the address.
                                    30B G 2986    Control channel is
sent in the address and is added to $2800 ($2986-$2800 = $186)
```

For certain new networks, such as SmartZone OmniLink operating on VHF or UHF, the input hex channel id is sent in place of the $308. Please see my explanation on how Out of Band trunking works to fully understand trunking VHF and UHF frequencies.

With the introduction of AMSS, SmartNet, SmartZone, and SmartZone OmniLink new OSWs were added to the mix. These networks now sent out site number identifiers, additional system background information related to the local site, and adjacent site announcements to name a few.

Basically when a new system type was introduced new code was introduced. This is why radios must specifically be optioned for SmartNet or SmartZone for example. They need to have their firmware updated so they know how to decode the information.

With the creation of the APCO-25 trunking standard there is now a common format for data signaling over the control channel and a standard format for OSWs. The data rate is 9600 baud and the OSW consists of a block of 11 octets creating a total of 88 bits. Developers who wish to use APCO-25 trunking may add there own OSWs but must identify properly in the manufacturer's id so radios know how to decode them properly. Further information on APCO-25 trunking can be found through the EIA/TIA document 102.AABB.

Further info to be added at a later date.

The differences between Privacy Plus, SmartNet, SmartZone, SmartZone OmniLink, and networks in general

My knowledge of the early history of Motorola trunking isn't terrific but I believe the first systems were marketed as Privacy Plus. This was meant to mean that now two-way radio users had their own specific channels, or fleets, and made there conversations private from everyone else on the network. With conventional radio and community repeaters you simply could go into monitor mode and hear all other traffic on the network compromising privacy. The system was not necessarily secure or meant to be, but now conversations were private. You didn't have to contend with the talkative taxi company or the foul mouthed truck drivers. When you wanted to talk you picked up the microphone and talked, this is permitting someone else on your sub-fleet wasn't talking. Privacy Plus didn't really add advanced features other than basic trunking. Later enhancements were developed such as Privacy Plus-enhanced, Privacy Plus-SE, ShareNet, and Coverage Plus. These networks were more geared toward the SMR operator. Considering Privacy Plus was one of the first networks and Type I was the first protocol to be used a majority of Privacy Plus systems were Type I. As Type II evolved it was added to the capabilities of Privacy Plus but never truly became widespread. Type I radios were simple to use and cheap.

Later, another the entry level trunking solution was introduced called StartSite. StartSite offered basic trunking, telephone interconnect, and a maximum of 5 channels. This was great for a large office, warehouse, or shipyard.

With the creation of the APCO-16 standard Motorola now needed to add support to their systems in order to be compliant with the standard. The standard was strictly aimed toward Public Safety. Motorola's answer was SmartNet. It added the features of PTT-ID, prioritizing radio ids and talkgroups, dynamic regrouping, emergency alarm/call, automatic channel assignment/updating, busy queuing/call back, selective radio inhibit, subscriber access control (SAC), digital voice encryption, redundancy of AMSS remote sites, telephone interconnect, and SMR backup/roaming. Here are the details of the most used features below.

- PTT-ID: Every call would require the radio id to be sent to the system for authorization. That way all radios on the network were always properly identified.
- Assignable priority levels: There are a total of 8 priority levels though only 7 are assignable. The highest priority is reserved for emergencies. This feature allowed priority access to the system for Public Safety over say, trash collection or a school district.
- Dynamic Regrouping: Dynamic regrouping allows a Dispatcher or trunked terminal to send a dynamically assigned talkgroup to a radio. A specific mode is programmed for Dynamic Regrouping. In the event of an emergency where a talkgroup is created ad hoc for the incident, the talkgroup can be sent to the radio so that all radios would have access to this talkgroup. The use of the feature is endless.
- Emergency alarm/call: In the event of an emergency the subscriber could push a button on their radio, alert the dispatcher, and have highest priority access to the system. There are two ways for this to

work when the system is full. One of them is called ruthless preemption, which will interrupt the lowest priority user and gives the higher priority emergency access to the channel. The lower priority subscriber is basically bumped off the system. The other alternative is to queue the emergency yet put it at the top most level of the queue if other subscribers have been queued.

- Channel assignment/updating: When a call is placed it will be reflected over the control channel and a continuous message will be sent out informing late entry subscribers of the call in progress.
- Busy queuing/call back: If all channels within the system are in use a queue is created for any subscriber which is unable to place a call. Once they are given access to the system, they are called back. This is typically announced by the radio emitting the talk-permit tone.
- Selective radio inhibit: If a radio is lost or stolen it can be sent a command which places it into a dormant state. The radio will operate as normal but will give no sign to the subscriber it is operating or allow the subscriber any access to the radio whatsoever. The radio basically becomes dead, though not deaf to the system it was inhibited on. That way the radio can be restored (Xinhibited) by a Dispatcher or trunked terminal.
- Subscriber Access Control: This is a database which is commonly referred to as the SAC. It is a database of radios and talkgroups which are allowed to access the system, or are not allowed to access the system. Earlier versions of the SAC database had two options; the first was to allow all access to the system except for specific radios or groups, and the second was to only permit groups and radios which were entered into the database. Newer SAC databases, used by SmartZone for example, allow radio ids and talk groups to be created and then individually enabled or disabled on an as-needed basis.
- Digital voice encryption: All or specific transmissions on the network can be encrypted or sent in the clear. Radios to be encrypted are loaded with a key (As DES requires a key to operate) and then can select whether they want to transmit in the clear or coded. Specific groups, or activities can be slaved for coded or clear. Often, encryption is referred to as coded communications.
- Telephone interconnect: Subscriber radios, which when properly programmed, may initiate a half-duplex phone call. A button is pressed on the radio and a dial tone will appear. That is unless the feature has been disabled or allotted time has been exceeded.

Motorola's answer for APCO-16 support was the marketing name SmartNet. SmartNet was first introduced when Type I was the only protocol available. SmartNet was then referred to as SmartNet I. When Type II was introduced SmartNet II was created. Later on an improved version was created called SmartNet II+. I do not have any details as to the specific differences or if there was really an improvement. Typically you can never tell the difference between II and II+.

With the need for Wide Area Coverage Simulcast was introduced permitting multiple trunked sites within a network. As the same as conventional simulcast, one site is the prime site (Containing the voting comparator) and the rest are remote sites. The prime site contains the primary site controller with each remote site having a remote site controller (ReSC). Currently you are limited to 10 sites in a trunked Simulcast network. With Simulcast all sites use the same frequencies, because of this, all sites must have one form of synchronization, which is predominately done with GPS these days, but a clock sync can still be sent along a leased line.

In addition, a trunked network can use Receiver Voting, which is basically half of what Simulcast does. There are multiple sites strictly for receiving which send the audio to the prime site which then compares them and then votes which is the best source. That audio path is then sent to the transmitter sites. Sites can typically have both transmitters and receivers but there will still be a few which will be strictly for receive only.

Motorola uses three types of voting systems for Simulcast and Receiver Voting. The first and oldest is SpectraTAC. [The TAC stands for Total Area Coverage.] Next in line was DigiTAC. DigiTAC added the support for voting of 12kbit encryption and data. The last, and current, is ASTROTAC, which performs all the previous forms of voice and data plus ASTRO modulation. All these systems are used on both conventional and trunked networks. In some cases if you pay attention to the sound at the end of the transmission you'll hear a pop-click type sound which varies per TAC type but can be used to determine what type of voter is being used.

SmartNet systems in the beginning were limited to a maximum of 21 channels per network. Later the hardware was modified for a maximum of 28, which is still the current maximum. But say a customer didn't need such large capabilities such as 28 channels or 60,000 radio ids? They wanted something smaller and they were given SmartWorks. SmartWorks gave the customer full APCO-16 support but gave them a smaller database and a limited amount of channels (8). At a later date the customer could upgrade to a SmartNet II network if needed. I believe the University of California supplies all its campuses with SmartWorks networks.

An alternative to Simulcast technology when Wide Area Coverage is needed is AMSS. AMSS stands for automatic multiple site selection. Each individual site in the network is not restricted by frequency or number of channels. One site can have 20 channels, one can have 4, and another can have 12. The restriction here is that each site has different frequencies.

Each site in an AMSS network will have an individual site number assigned to it and has it broadcasted over the control channel. When a subscriber is granted a call at one site his or her talkgroup will be broadcasted at every site on the first available channel. In certain configurations the call may not be permitted if a site has all channels in use.

AMSS added flexibility but did not truly give the network efficiency for assignment of resources. Today there are a small few of AMSS networks in use. I can recall one in Texas operated by the Military and one in the San Francisco Bay Area operated by the Department of the Interior for the Golden Gate National Park. Each one operates on UHF.

Enter SmartZone. SmartZone allows multiple trunked networks, be they single or multiple site, to be interconnected and communicate in a wide-area fashion. Besides being interconnected they are all controlled by a master controller called the Zone Controller (ZC). The ZC has the master database and is the primary point for control of audio paths within the network. Though each individual site has a controller it basically goes into a passive mode while connected to the ZC. The ZC chassis permits a total of 64 connections via RS-232. Below I've listed possible equipment which can take up a port on the ZC.

- Trunked site: This is basically a communications path to the site controller. It can either be a 6809 site or an IntelliRepeater.
- CIU Distribution Panel Link (CDL): Console Interface Units (CIU) connect through here. A CIU is responsible for encryption and decryption of traffic for a recording device or dispatcher console.
- Data Broadcast Link (DBL): Digital Interface Units (DIU) connect through here. A DIU is similar to a CIU yet it is for demodulating ASTRO traffic.
- Business Exchange: The Business Exchange is responsible for handling telephone interconnect.

As you can see the ZC supports a total of 64 sites per zone network, but that is if telephone interconnect and/or consoles are not used. A majority of agencies or organizations in charge of a SmartZone network will have consoles so the number of sites will be reduced.

Another important part of a SmartZone network is the Ambassador Electronics Bank (AEB). The AEB's primary responsibility is to switch audio. It takes audio paths from an input source and then, based on the ZC's decision, routes them to specific output ports. Every channel, or station, within the zone network is connected to the AEB. Why is this important? SmartZone systems use what is called Dynamic Site Assignment for efficient allocation of resources. DSA is a feature which AMSS didn't have. An AMSS network could not control which sites broadcasted which talkgroups. The feature of DSA is it assigns only the sites which need to the audio for an affiliated subscriber. For example, we have a SmartZone network with 5 sites. One of these sites is our main traffic site with a majority of our subscribers affiliated to this site, the other four sites are strictly for fill-in. Once a subscriber leaves the main site he or she will affiliate at one of our fill-in sites. Lets say this subscriber is on "Metro Dispatch." The affiliation to Metro Dispatch is sent to the ZC which in turn updates its table as to which sites get Metro Dispatch broadcasted to it. The ZC when then tell the AEB to create an audio path between our main site and that specific fill-in site. Before this subscriber roamed to this site there was no one there affiliated to Metro Dispatch. Metro may have been really busy at our main site but there was no traffic whatsoever at our fill-in site. This is why affiliations are important in a SmartZone network.

Another important feature of SmartZone is an added level of redundancy. If a normal trunked system has a fault occur with the central controller it would go into Failsoft. With SmartZone there is one level added in-between. This is called Site Trunking. When a SmartZone network is operating normally it is referred to as Wide Area trunking. If a site somehow loses its link to the ZC it will revert to Site Trunking. In this mode the site continues to operate normally but without rebroadcast of audio to other sites. Being we lost our link we can't pass the audio. With a 6809 controller you can have a local backup SAC database but in most cases this isn't done. We don't want sites to go into Site Trunking. Now if the individual site has a problem with its controller the site will go into Failsoft. Even though the site is connected to the ZC with it in control, the ZC tells the local site controller what to do.

Considering SmartZone systems are highly configurable they permit the administrator the option to restrict radios or talkgroups to specific sites. If you setup a site strictly for the northern part of the county and have talkgroups for that specific area you can restrict them to that site. In addition if you have a subscriber who only needs coverage for one or two sites you can select which sites they can use. If the radio tries to affiliate to another site, which it received from an adjacent site announcement, it will receive a rejection and leave the site. Since we use affiliations for basic control on the network, the transition is quick and painless.

One piece of equipment strictly for use on a SmartZone network is the IntelliRepeater (IR). An IR site does not need a separate controller. Each station at the site is an IR and can perform the function of a control channel if needed.

What happens when we need more than 64 sites? Motorola created an enhancement to SmartZone called OmniLink. OmniLink is basically software driven and is primarily interconnection and communication between different SmartZone networks. Each SmartZone network in an OmniLink network is called a Zone. Basically each SmartZone network is identified by a system id for every site. So each Zone in an OmniLink network would have a different system id. You're then allowed up to three zones, or a total of 192 sites.

Being there's not a lot more to OmniLink there isn't much more to say. Each Zone in the OmniLink network still has its own ZC, with its own database, but each ZC is now interconnected. When a radio roams to another Zone it first must get permission to trespass into this new Zone. This radio found out about this other Zone through the adjacent site announcement. Sites can actually be configured to not allow trespass and will indicate so in the site background word.

SmartZone systems have a million and one different ways to be configured and support a wide variety of features. These are best left for another discussion. I may further include more information at a later time. If you feel I missed something please email me and let me know.

What is Trunking? - First it's a lousy 'techie' term for a very big business. Let me give the technical definition then the real world practical definition to get you started. There are many more things to tell you about this Trunking thing, but I'll keep it simple.

Technically- Trunking is a method of using relatively few communication paths for a large number potential users. Every time you pick up a telephone in your office or home, you are using a Trunking concept. If, in your city you have 100,000 phones, the equipment that makes it work (we call it the Central Office) cannot actually handle 100,000 simultaneous conversations. It may only be capable of handling 40,000 at one time. Statistic analysis is used to figure out the needed size of the Central Office 'switch' (it's like a really smart special computer) to handle all of the calls with little or no 'blockage' (when you can't get a dial tone). Airports don't have one runway for every airplane (silly I know). They share 2-3 runways for hundreds of airplanes. There's lots of other examples in daily life. You're getting the idea.

The Trunking we deal with is for wireless 'two-way radios'. These are the radios that courier companies, plumbing companies, construction companies, taxi companies, and lots of others use to coordinate men and machines. If you can think of a business that has vehicles of any kind, they need radios to compete in today's business world. Trunking is a reasonably low cost way for these companies to get some pretty great communications.

Entrepreneurs invest in putting up towers and the 'switching equipment' and radio channels that are the infrastructure (the engine) of a Trunking system. The hardware manufactures work with the entrepreneurs to design the systems. Antennas go up, computers are installed at the tower, phone lines attached. It is kind of like a cellular phone system where you can not only make phone calls but you can also push a single button on each radio to make an 'intercom' call to all or some of the the radios in their fleet. The cost to the entrepreneur will vary from $20,000-$200,000 per site. Cost to the user is about $200-$1500 per radio and about $.50 per day per radio for using the trunk system.

In the world, there are several different 'flavors' of Trunking. In the USA, our FCC decided to allow the industry to determine

For More information on each of these products or companies, click on the highlighted Hyperlink!

the best format for Trunking. The up side was that it brought Trunking to the masses rather quickly. The downside was that we ended up with a bunch of different Trunking formats that don't talk to each other! In the USA, the most prominent formats are those created by Motorola (Privacy Plus) and E.F. Johnson (LTR -Logic Trunked Radio). General Electric had one called GEMarc that was reasonably popular. RCA also came up with one that really never went anywhere. There were several others that never went anywhere. Today, the LTR flavor has several variations. There is Zetron's various offerings, Trident MicroSystem's PassPort technology, IDA and others. There are also a few startup technologies such as one from A Communications called CellSMR that show promise. Today, we also add to Motorola and LTR, iDEN which is a digital Trunking format from Motorola. The biggest purveyor of iDEN in the USA is NEXTEL. General Electric has also teamed up with Ericsson over the years to create a rather formidable Trunking format called EDACS. EDACS was first aimed at the private sector (Police, manufacturing, etc.) Since 1996 they have been marketing their systems for general public use.

On the global Trunking front, we see a different skew of Trunking 'flavors'. In Europe, there is a heavy penetration of the TETRA and TETRAPOL formats. These are replacing the MPT1327 format. You also see a lot of the MPT1327 format in Asia. In South and Central America, you will find a total mix of all formats with a heavy skew toward the mix in the USA. The bottom line is that you find one Trunking flavor more predominant than others in areas where there was a stronger marketing presence by a given manufacturer

Mind telling us the Legal Registered Name of your club and their tax
status and I dont mean "Tax Free". You know the one I mean,
The federal certificate that list's the name of the "club" also list's
the designated Tax Status..

You just do not give out This crap below without The Proper
Federal Authorization. You give NO tax free code number..

> get a nice letter, for a tax
>>deduction, from our club.

You ignored my last request for this infornation and posting
the Drivel like this will only get you more attention from the I.R.S.

Just My Opinion

Bob

To the group,

Has anyone had problems with transmitting and interference with computers? What I mean is while your talking to someone on your radio that your network lines will act like an antenna and pick up your signal. I have a cable modem hooked up to a router and from the router to the various computers via network lines(unfortunately not shielded) in my home. I plan to be a ham and was wondering if this would be a problem.

Thank you

David Boswell

It could be a problem. The best bet is to go with shielded lines. There
are also toroidal coils that you can put on the lines. Or you may need to
do both. Or it's possible that you may be fine as you are. You won't be
able to tell until you start operating the radio.

Amateur Radio Newsline™ Report 1376 - December 26, 2003

Amateur Radio Newsline report number 1376 with a release date of Friday, December 26, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. A California city says NO to BPL, an earthquake hits the central California and Kids Day 2004 is just a week or so away. The details on Amateur Radio Newsline report number 1376 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW: LOMPOC SAYS NO TO BPL

The City of Lompoc, California, has said NO to Broadband over Powerlines, and its a big win for ham radio. Amateur Radio Newsline's Bruce Tennant, K6PZW, has been monitoring the situation and has the details:

--

Paul Andreasen, K1JAN, said it this way -- quote: "Well, we won ONE at least!"

What Andreasen is referring to was a plan by Lompoc city leaders to deploy Broadband over Powerlines in that city and the work of the ham community to head it off.

Andreasen is the ARRL Technical Coordinator for the Santa Barbara Section and a ARRL Technical Advisor for the League's Southwestern Division. And he was one of the organizers of the movement to stop the deployment of B-P-L in the Lompoc area.

In an e-mail, Andreasen says that his group sprang into action when they learned of plans to permit powerline broadband. He presented city leaders with several studies and some facts on interference effects to and from other licensed RF users.

--

Andreasen: "I know the mayor so I stopped in one day and asked him. He said yes they were and I introduced him to some of the facts of radiation not only causing problems with public communications, the CHP, Amateur Radio, etc., but about it also causing problems with the BPL system (itself).

--

Meantime, Eric Lemmon, WB6FLY, made the California Highway Patrol aware of their efforts. The statewide C-H-P radio system operates on low-band F-M which falls right smack in the middle of the spectrum used by B-P-L.

And then they wait until December 17th for the newspapers to report the results of their City Council vote on the matter. The good news: No Broadband Over Powerlines in Lompoc. Instead, the City Council approved a rival, non radiating system that uses fiber optic technology.

But that's not all. The company that did the study for the planners was told by the City Administrator not to entertain any radiating methodologies at all. All because ham radio operators spoke up and provided proof that B-P-L could be hazardous to the regions R-F environment.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

Another quote from Paul Andreasen, K1JAN, kind of sums it up. "We not only win one, but a bureaucracy kept it's word!" (K1JAN, W6YN)

**

RESCUE RADIO: THE CENTRAL CALIFORNIA QUAKE

Meantime, about 90 miles North of Lompoc an earthquake measuring 6 point 5 on the Richter scale struck at 11:15 a.m. on Monday December 22nd. Centered not far from the famed Hearst Castle tourist attraction at San Simmeon. Ham radio was quick to respond as we hear in this report:

--

K6YR: "Various parts of the livingroom looked like the U.S. Army had gone through a Fedeey'n safe house. Just glass and food stuffs all over the place. It was pretty scary."

--

That's Rob Griffin, K6YR, the Section Manager for the area where the quake hit. He was describing what his own home looked like after the magnitude 6.5 temblor hit. But Griffin would have to put off clean-up chores because there was other work that needed to be done:

--

K6YR: By noon the San Luis Obispo Emergency Operations Center had called out the ARES and RACES operators, primarily supporting the Red Cross in opening shelters in Paso Robles and Oceana. Morrow Bay also had Red Cross shelters and we provided communications for the Red Cross because their cell phones just weren't functioning for the first 12 hours after the earthquake.

--

According to Griffin with cellphones down, another way to communicate was needed by emergency workers. Enter ham radio volunteers.

--

K6YR: "We had some come from as far as South county which includes Oceana, Nipomo, maybe even some from Santa Maria to help support the North county Paso Robles ARES area."

--

The city of Paso Robles was hardest hit. Part of the historic downtown area was destroyed and two people were killed.   Griffin says that hams were on scene providing communications for about 24 hours. When we spoke to K6YR some were still there:

--

K6YR: " There are some Amateur operators still manning the county Emergency Operations Center. but my understanding is that the communications and support up at the Paso Robles Police Department has closed down for the timer being and it appears that the Red Cross has its communications which relies on cell phones back in operation."

--

The bottom line. It took the cellular providers about 12 hours to get service back to most of the stricken area. Meantime ham radio operators were there, doing what they do best.

For the Amateur Radio Newsline, I'm Burt Hicks, WB6MQV, reporting.

--

According to Cal Tech, Monday's temblor was the state's first deadly earthquake since the magnitude 6.7 shaker that hit Northridge California in 1994. (ARNewsline(tm))

**

RESTRUCTURING: VK TO GET REVISED AMATEUR RADIO SERVICE

Hams in Australia will soon have a restructured Amateur Radio Service. Some of the changes are coming soon Others are still being negotiated. Q-News Graham Kemp, VK4BB, is here with the details:

--

As reported, the Australian Communications Authority has decided to discontinue the Morse code proficiency requirement for the amateur service. The ACA will also remove the prohibition of third party communications to an amateur station in another country. If another country seeks a prohibition on such communications, this will be published and conveyed to the amateurs. To effect this decision, the ACA will need to amend the Radiocommunications Licence Conditions Determination No. 1 of 1997. Thats the Amateur LCD.

The ACA will directly inform the amateur community through established communication channels when the amendment has been made. The ACA will update the Amateur Internet Linking System consumer fact sheet to incorporate changes to third party communication arrangements.

The ACA will continue to impose limits on the purity and stability of emitted frequencies, and maximum power limits on amateur stations in accordance with the ITU's requirements for transmitting stations. The ITU requirements will be incorporated into the ACA's public information doments in early 2004 to ensure that they are available to amateur licensees.

The ACA will maintain current requirements for use of a callsign while operating an amateur station, as contained in sections 8, 37 and 44 of the Amateur LCD. The ACA is still considering whether to permit the abbreviation of callsigns during emergency services operations and training. A decision will be announced by mid-2004.

The ACA will proceed with the proposal for Australia to participate in European Conference of Postal and Telecommunications Administrations - CEPT. While liaison with CEPT about T/R 61-01 can commence immediately, the licensing arrangements necessary to implement this will not begin until mid-2004.

The ACA is working through submissions about the remaining proposals, including the licensing structure, and expects to announce decisions by mid 2004.

For the Amateur Radio Newsline, I'm Graham Kemp, VK4BB, of Q-News Australia.

--

Obviously for hams down-under, this is the start of something big. (Q-News)

Break 1

News never takes a holiday and neither do we. From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the K-9-K-E repeater serving Godfrey Illinois.

(5 sec pause here)

**

HAM RADIO EVENTS: KID'S DAY IS SUNDAY JANUARY 4

Its one of the two most important ham radio holidays of the ham radio year and its only about a week away. Of coarse we are talking about the first of two Kids Day operating events for 2004.

According to a recent ARRL Letter, the first Kid's Day of 2004 will occur on a Sunday. Next Sunday, January the 4th. And unlike most other on-the-air events, Kid's Day is not a contest. Rather its a time when experienced hams open their hearts and their stations to invite kids in and put them on the air to experience the magic that is ham radio.

Kid's Day will run from 1800 to 2400 UTC, and there's no limit on operating time. The suggested exchange is a youngsters name, age, location and favorite color. Most operation will be found on 14.270 to 14.300, 21.380 to 21.400 and 28.350 to 28.400 MHz and local 2 meter repeaters.

Guidelines for Kids Day are available at www.arrl.org/FandES/ead/kd-rules.htm. And -- oh yes: If you miss this Kids Day operating event the next one won't take place until Saturday, June 19th. (ARRL)

**

HAM RADIO EDUCATION: IARU CONGRATULATES NEW HAMS

A top IARU official has welcomed Albania's newly licensed hams to the hobby. Bill Pasternak, WA6ITF, is here with more:

--

Ole Garpestadt, LA2RR, is IARU Region 1 Chairman. And while participating in the recent graduation ceremony for Project Goodwill Albania 2003, he took the time to congratulate the new Albanian licensees, and welcomed them to the bands.

Garpestadt credited the University of Triana and the program organizers with their success in conducting the training and succeeding in something that the IARU itself has had only limited results with. It should be noted that LA2RR participated in final negotiations with Albanian authorities for their entry to CEPT and bringing the Albanian licensing regime into line with the rest of the CEPT world.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF

--

One final note on Project Goodwill Albania 2003. Its organizer, the famed D-Xer Martti Laine, O-H-2-B-H, was awarded a "Senior Fellow of Polytechnic University of Tirana" at the graduation ceremony. In his closing remarks Liane thanked everyone involved for what he termed as their five weeks of serious effort. (Via press release)

**

HAM RADIO EDUCATION: 2004 - 2005 FAR SCHOLARSHIPS OPEN

Meanwhile, here in the United States, it's ham radio scholarship time again. This, with word that Foundation for Amateur Radio is providing applications for hams to apply for the 59 awards that it will administer for the 2004 through 2005 academic.

Right now, the foundation is inviting Amateur Radio licensees planning to pursue a full-time course of study beyond high school, and who are either enrolled in or accepted for enrollment at an accredited university, college or technical school to compete for these scholarships. Awards range from $500 to $2500 with preference in some cases going to residents of specific geographic area or to those pursuing certain study programs.

The cutoff date is April 30, 2004. Application forms are available by mailing a request to FAR Scholarships, P.O. Box 831 Riverdale, Maryland. The Zipcode is 20738. (Foundation for Amateur Radio)

**

ELECTRONIC ASSISTANCE: REPAIRCLINIC.COM

A new Web site has been created to usher Americans away from their throwaway habits and into the world of yesteryear when we just kept it working.

Called RepairClinic.com, the cyberspac port provides aids for those looking to repair anything from a refrigerator or air conditioner to more complex devices such as microwave ovens. The site appears to derive most of its income by selling spare parts and factory manuals.

At the moment the site sticks to typical kitchen appliances. It does not provide advice on such items as radios, T-V sets, VCRs and other consumer electronics. At least, not yet. (Science Today)

**

RESCUE RADIO: THE LATEST TOWER TO COLLAPSE IS....

A 528 foot tower supporting antennas for WMGX and WYNZ in the Portland, Maine area collapsed on Thursday, December 11th. As reported on Scott Fybush's web site, the reason for the tower falling appears to be a guy wire that apparently snapped. The story, and a photo of the tower prior to collapse, can be seen at www.fybush.com/nerw.html Its not known if any ham radio repeaters shared this support structure. (CGC)

**

NAMES IN THE NEWS: VE1MR NAMED RAC RADIO AMATEUR OF 2003

Bill Elliott, VE1MR, has been named to receive the RAC Radio Amateur of the Year Award for 2003. Currently President of Halifax Amateur Radio Club, Elliott has been a Radio Amateur and a member of Radio Amateurs of Canada and its predecessor national organizations for over twenty years. Through that time, VE1MR has consistently and generously donated his technical and organizational skills to significantly promoting excellence in Amateur Radio and facilitating its public service role.

For a complete story on VE1MR's activities and the contributions which qualified him for this prestigious award, see http://www.rac.ca/new/canada.htm (RAC)

**

NAMES IN THE NEWS: JENNICAM GOING QRT

And, by the time you read this, Jennifer Ringley will have taken her famed jennicam.org webcam off the Internet and Q-R-T. This, after 7 years of her permitting the world to watch her life through a cyberspace eye.

Ringley was 20 and a student at a Pennsylvania college when she installed a web camera in her room and launched jennicam.org. That was in April of 1996 and over the years the cameras have followed her every movement 24 hours a day.

A self-described former computer geek who now lives in Northern California, Ringley has posted that her web cam was intended to be a fun way for her mom or friends to keep tabs on her. Also, that it was an interesting use for the digital camera that she bought on a whim in the bookstore.

Now, the site has a notice saying it will be closing on December 31st. No reason is given and Ringley has not respond to e-mail query's from the press. (Published news reports)

**

BREAK 2

Bringing you communications news 52 weeks a year. From the United States of America, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

NEWSLINE NEWS: MORE THANK YOU'S WITH N6TCQ

Ladies and gentlemen, we end this year and begin the next by saying thank you to more listeners who kept the Amateur Radio Newsline on the air throughout 2003. Here's Andy Jarema, N6TCQ:

--

This week we have the second half of our list of people who helped us financially in the month of April:

Linda Reeder of Salt Lake City, Vic Hartpence, W7RKU of Sparks, NV, The Puget Amateur Radio Society of Kirkland, WA, The Quarter Century Wireless Association of Eugene, OR'. Bill Alexander, KR6G of Quincy, CA, Leo Halog, KR6EG of San Fransisco, Mark Lunge and the MSARC N6MPX Repeater System, San Leandro, Monthly contributor William Walters, WA2IBM, of San Jose, Monthly contributor Scott Hensley of the Area Communications Team, San Jose
SCATS, the Southern California Amateur Transmitting Society, in West Covina, Our good friend Dave Bell, W6AQ of Hollywood, And Newsline Staff volunteers who paid out-of-pocket to keep Newsline on the air.

Thank you to everyone. Your April response to our crisis was exceptional, and we promise to do our best to continue to earn your care and support. A reminder that Newsline is a 501c 3 California non-profit corporation. FCC regulations prohibit us from telling you exactly how to support us, but that information is on our website at www.arnewsline.org. I'm Andy Jarema,
N6TCQ.

--

More from Andy in future Amateur Radio Newsline reports.
(ARNewsline(tm))

HAM RADIO AND SPACE: THE MARS EXPRESS

An amazing space DX record for ham radio. This as Charlie Suckling, G3WDG reports that he has successfully received the 'Mars Express' deep-space probe using his 3 meter dish antenna.

Mars Express has been on its way to the red planet since the 2nd of June and was scheduled to arrive on Christmas Day. The signal was earlier received on 8.4 GHz by James Miller, G-3-R-U-H, at the AMSAT D-L ground station in Bochum, Germany. This, when the probe was 107 million kilometers away on November 16th.

Although traveling at the speed of light, the signal took about six minutes to reach earth. The AMSAT D-L website has information on how amateurs can receive Mars Express.

The AMSAT-DL website at www.amsat-dl/pa5/reception_g3ruh.htm provides information on how amateurs can receive Mars Express. (GB2RS)

**

HAM RADIO IN SPACE: PC SAT UPDATE

AMSAT North America reports that P-C sat is doing fine and will continue in good sunlight through New Years Eve. The satellite is seeing about 50 packet users per day and 30 per pass over the USA.

Anyone with a 2 meter transceiver and T-N-C can easily copy this bird. Just tune the radio to 145.825 and watch for 1200 baud normal AX.25 packet. (AMSAT)

**

INTERNATIONAL-SWEDEN: NO CODE ON JANUARY 1?

GB2RS reports that Sweden is likely to permit former CEPT Class 2 amateurs access to the High Frequency bands from the 1st of January. SM0SMK, the President of Swedish national amateur radio society has said that they hope the Morse code test requirement will be removed at the turn of the year.b (RSGB)

**

INTERNATIONAL - UK: NEW TRAINING PRESENTATIONS ON THE WEB

The Chelmsford Amateur Radio Society in Essex England has made all of its Powerpoint slide presentations for the United Kingdom's Foundation and Intermediate courses available on the web. Those who are interested in seeing what's involved in getting these new U-K licenses can download the slides from www.qsl.net/g0mwt (M5AKA)

**

DX

In DX, the FMRE Sunday bulletin has announced that the X-F4 DXpedition to Socorro Island will begin March 3rd, and run for two weeks. The call sign to be used is X-F-4-I-H. 8 operators from Mexico will be active all bands and modes including VHF, UHF and satellite. No QSL information is available at this time. (XE1KK, N4GN)

And S57CQ expects to be in Bhutan by the time you hear this newscast. He plans to spend as much of his spare time as possible active as A52Q. QSL as directed on the air. (RSGB)

Lastly PA4WM will be in Turkey for six months, on a four week rotation schedule. He operates SSB, CW and RTTY as TA1/PA4WM with 100 watts into a G5RV. He plans to upgrade his antennas with a vertical and receiving antenna for 160 and 80 meters at the earliest available time. (GB2RS)

**

THAT FINAL ITEM: HEAVY METAL ON THE HAM BANDS

And finally this week, Heavy metal is back on the ham bands. No, not the rock music kind. We are talking heavy metal as in vintage AM gear. Paul Goodman, K2ORC, has more in this report filed over the air - using AM :

--

Sunset on December 27, 2003 will mark the kickoff of this year's Heavy Metal Rally. A showcase for AM transmitters that weigh at least 250 pounds and produce 250 watts or more, the annual event is sponsored by Electric Radio magazine.

The Rally has become a coast to coast highlight for many AM amateur stations in North America with activity on 160, 75 and 40 meters. The event goes all night, ending at sunrise on December 28

Participants who want to compete for the top place trophy submit logs to the event coordinator. Scoring for the Heavy Metal Rally utilizes a point system that takes into account, among other things, total number of contacts and the number of states and bands worked. In a departure from traditional contest-type scoring, a station can receive an extra point for each positive signal or audio report received by the event coordinator from other hams and SWLs.

Scoring notwithstanding, many AM fans participate in the Heavy Metal Rally simply for the pleasure of talking and listening to other AM stations with strong signals and outstanding audio.

Winter HF operating conditions generally lead to numerous coast to coast contacts featuring a diversity of transmitters. It would not be unusual for listeners to hear, an amateur in Colorado on a restored Gates broadcast transmitter chatting with someone in California running a Collins broadcast transmitter.

--
Contact Audio
--

While broadcast transmitters may be the first thing to come to mind when picturing equipment that meets the Heavy Metal weight and power criteria, the Rally also features a sizeable number of homebrew and military rigs. For more information on the 2003 Heavy Metal Rally, including the email address for log submissions and a list of suggested operating frequencies, please visit amfone.net -- that's alpha-mike-foxtrot-oscar-november-echo - dot - net.

Reporting for the Amateur Radio Newsline, this is Paul Goodman, K2ORC.

--

Sounds great, doesn't it! You can hear more for yourself on Saturday evening December 27th overnight into Sunday the 28th on 160 and 75 meters. Its the 2003 Heavy Metal Rally on your radio to enjoy. (ARNewsline(tm))

**

NEWSCAST CLOSE

For this week and this year, that's all from the Amateur Radio Newsline. Our thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News for their assistance in producing this weeks report.

A reminder that our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Davis, W2JKD, saying 73, Happy New Year and we thank you for listening. Amateur Radio Newsline(tm) is Copyright 2003 and 2004. All rights are reserved.

N2ION, is your organization certified by the IRS as a 501(c)3 non-profit
organization? Unless you have that official status, donations are not
tax-deductible.

Jerry

Just curious. Why was he on 121.5? Did he declare an
emergency? What was the actual location of the aircraft?
I'd assume you were in Viet Nam? Was he on 121.5 in
error? Again, just curious.

If all of the network cable is cat-5 or better and it was properly installed and terminated, and if you properly install and ground the equipment in your station, you will minimize the chance of interference.
I would keep the station as far as possible from your cable modem, switches, and - if you installed one - patch panels for added protection. cat-5 and cat-5e cabled are pretty resilient to interference even though they are not shielded due to the twisting of the pairs. The twist helps protect the cable from external RF as well as helps minimize the amount of RF emitted from the cable. I believe cat-6 adds shielding, but that stuff must be horrible to work with based on what I've seen of it.

Yeah I was wondering about the 121.5 reference too since that is a military and civilian 'guard' channel for emergency use. :)

Of course. 121.5 and 243.0 MHz have always been the emergency frequencies
for aircraft and their ELTs. EPIRBS came along way afterwards and they

would naturally use those same frequencies since they are what the world (including satellites) monitors for down aircraft or people in distress. It's funny that the Russians are often the first to notice a 121.5 or 243 MHz signal due to their satellite system that looks for such signals. They often call U.S. NORAD to let them know of distress signals in US areas well before we know about them. I used to be a CAP pilot and many of the alerts we received from the USAF originated from the Russians.

Hi to all...I left out that this was xmas 1963.   JFK had been shot the month before...Viet-nam was in turmoil, as i recall there had been at least 2 changes of govt.since early Nov.. and McNamra was sending the 0ldest(time in zone)troops home .this was part of the importance of the contact to me...Quang-ngai tower had 118.3 &121.5, Danang had 126.2 & 121.5 (guard chan.) and i always thought the Pan Am pilot knew what he was doing. Quang-Ngai is 60 miles south of Danang 73`s Gene WB7NGI

Greetings,

I wonder if anyone could help me out with this one...

I have a FT-757 and recently bought it's matching FC-757AT antenna tuner.
The only problem is that it came without the matching interconnecting cable
(referred to as Connection Cable C T9101292 in my manual).

Does anyone have this cable that I may buy? I could certainly fabricate one
but the connectors seem Yaesu proprietary. If you have any information,
hints or guidance I would certainly appreciate it!

Many Thanks and 73,
Vaughn

I've lost the antenna for my Alinco DJ-C5T HT. This
is the little credit card radio and conventional antennas won't work.

Anyone have an idea where to purchase a replacment?

Best Regards,

George Rachor

Thanks for the email responses. As it turns out Yaesu had a few of them left. For other folks that may need one as well it is my understanding that HRO carries them.

Many Thanks,

Vaughn

FCC ALLOCATIONS:

FCC Frequency Allocations

A summary of the FCC Table of Frequency Allocations, based on the Code of Federal Regulations - 47 CFR 2.106, with additional information from the NTIA channel plan, et.al.

30 - 50 MHz: FM @ 20 kHz steps

30.000 -	30.560	US Government
30.560 -	31.980	Business / Industry / Forestry
31.990 -	32.000	Public Safety
32.000 -	33.000	US Government
33.000 -	33.100	Public Safety
33.120 -	33.400	Business / Petroleum
33.420 -	34.000	Fire
34.000 -	35.000	US Government
35.020 -	36.000	Business / Paging
36.000 -	37.000	US Government
37.020 -	37.420	Police / Local Govt
37.460 -	37.860	Power, Water, Pipeline
37.900 -	38.000	Highway Maint / Special Emergency

```
      38.000 -  39.000  US Government
      39.020 -  40.000  Police / Local Govt
      40.000 -  42.000  US Government
      42.020 -  42.940  State Police
      42.960 -  43.680  Business / Paging
      43.700 -  44.600  Transportation - bus, truck / Cordless base
      44.620 -  45.060  State Police / Forestry Conservation
      45.080 -  45.860  Police / Local Govt / Highway Maint
      45.900 -  46.040  Police / Emergency
      46.060 -  46.500  Fire
      46.520 -  46.580  Local Govt
      46.610 -  46.970  Cordless Phones - base     (20/40 kHz steps)
      47.020 -  47.400  Highway Maint
      47.440 -  47.680  Industry / Emergency
      47.700 -  49.580  Industry / Cordless handset
      49.670 -  49.990  Cordless Phones - handset  (irregular steps)

  50 - 150 MHz
      50.000 -  54.000  Amateur (6-meter)
      54.000 -  72.000  Broadcast TV   chs 2-4         (6 MHz steps -
FMw)
      72.000 -  76.000  (various)
              [ 75.000] Aero - ILS marker beacon
      76.000 -  88.000  Broadcast TV   chs 5-6         (6 MHz steps -
FMw)
      88.100 - 107.900  FM Broadcast                 (200 kHz steps -
FMw)
     108.000 - 117.950  Aero - VOR and ILS localizer  (50 kHz steps)
     118.000 - 136.975  Aero - communications         (25 kHz steps -
AM)
              [121.500] Aero - emergency (international)
     137.000 - 138.000  Satellite
     138.000 - 144.000  US Government - land mobile   (25 kHz steps)
     144.000 - 148.000  Amateur (2-meter)
     148.000 - 149.900  US Government - fixed/mobile, satellite
     149.900 - 150.050  Satellite - radio navigation
     150.050 - 150.800  US Government - fixed/mobile

  150 - 162 MHz:  FM @ 15 kHz steps
     150.815 - 150.965  Auto Emergency
     150.995 - 151.595  Highway / Forestry / Industry
     151.625 - 151.955  Business                      (30 kHz steps)
     152.030 - 152.240  Mobile phone (Base) / Page    (30 kHz steps)
     152.270 - 152.450  Taxi (Base)
     152.510 - 152.840  Mobile phone (Base) / Page    (30 kHz steps)
     152.870 - 153.725  Industry
     153.740 - 154.445  Fire / Govt (mobile)
     154.452 - 154.482  Industry (telemetry)         (7.5 kHz steps)
     154.490 - 154.625  Industry
     154.650 - 156.240  Police / Govt / Emergency / Hwy
     156.025 - 157.425  Maritime (ship)               (25 kHz steps)
     157.470 - 157.515  Auto Emergency
     157.530 - 157.710  Taxi (mobile) / Business
```

157.770 - 158.100	Mobile phone (mobile) / Page	(30 kHz steps)

355-666	880.650 - 889.980	B - Telco	voice
667-716	890.010 - 891.480	A - RCC	voice
717-799	891.510 - 893.970	B - Telco	voice

Transmissions are FM (some systems are adding digital). Channels are 30 kHz apart. Mobiles transmit 45 MHz below the base (824.040-848.970) and are usually repeated by the base. Channels 991-1023 are also identified as Chs 800-832.

Cordless Telephone

PIRATE RADIO

"Where do I listen for Pirates?"

Recently the area of 6955 kHz (43 Meters) is seeing allot of activity and one should be able to hear something there on almost ANY weekend. With SWBC stations crowding the more traditional 41 Meter range, clear frequencies for pirate use are very difficult to come-by. Recent activity has been on 7375 kHz before Croatia on 7370 kHz and RFPI on 7385v kHz sign on, 7415 area is active at almost anytime of day, 7445 kHz has seen some use but the Israeli Mossad Station and Greece on

7448 kHz has discouraged many from using this frequency. 7465-7480 kHz sees a good bit of activity as well. Pirates also experimented with frequencies slightly above 7500 kHz but there was a lack of interest due to the limited coverage of some stations Transmitters and lack of a clear frequency. Other frequencies to check are 3400 kHz, 5850 kHz, 6295 kHz, 9900 kHz, 13900 kHz, 14400 kHz and around 15050 kHz.

"When do I listen for Pirates?"

There really isn't an answer, on the weekends keep a 24 hour vigil on 43 & 41 meter frequencies. The majority of the activity tends to concentrate from around 1900-0200 on Sat nights, with Fri & Sun showing some activity. Sunday mornings around 1300-1600 on both 43 & 41 meters is also a good time to check. The lower frequencies are primarily darkness paths and the higher frequencies are primarily daytime paths so keep that in mind.

"What mode should I listen in?"

Lately the trend amongst pirates has been to use Upper Sideband for the majority of the broadcasts you'll likely encounter. There are still a few stations that transmit in AM but they are far and few between. Lower Side band also sees a little use. Also keep alert for CW (Morse Code), RTTY, Narrow Band FM and I would suppose FAX & SSTV modes might be used on occasion as well.

"I Listen but don't seem to hear anything."

Always a problem when DXing low powered and erratic pirate broadcasts. One should be familiar with the frequency ranges that pirates use and KNOW what stations use what frequencies at what times so A: You don't waste your time listening to a legal SWBC station and B: It makes spotting pirates easier because you're hearing something that isn't normally there. I have produced VERY thorough listings called 40 Meter Notes and 43 Meter Notes that detail ALL broadcasting activity in these ranges. Just send your request via E-Mail and I'll send them to you. Your antenna is VERY important! Don't expect to hear allot of stations using your sets built-in whip antenna or an indoor job. A good performer is to build a 40 Meter dipole antenna and orient it North/South. I routinely compare mine to a random wire or an antenna that is resonant somewhere else and for DXing pirates a resonant antenna is difficult to beat. A good receiver is almost a necessity. Oh you'll be able to hear one or two stations with your Sangean 803 but a Communications Receiver with some good IF Filters makes for better results. Join the ACE, subscribe to Pirate Pages, form "Spotting Nets" with your friends, information is power and it helps to keep up on what the trends are in Pirate Radio.

I hope this helps a few people as I've seen VERY LITTLE helpful info other than the LEGAL FM-10 stuff. If you wish more info or just want to swap stories, you have my address. Good Luck and Good DX! end of message

rec.radio.amateur.dx:966 rec.radio.amateur.equipment:48063

Depends...
1. BUDGET?
2. Operations
3. And how far you want to go.

1.Budget.. you need to know how much you want or can spend. A modest mobile
rig will go for about $150. While a handheld a little less pending bells and
whistles.

2. Operations.. what do you want to do? Local repeater work? Maybe work some
DX on 6 meters? Or maybe the fav of HF? How about satellite? Packet?
Slowscan TV, Fast Scan TV? APRS? Oppurtunites are endless.

3. How far do you want to go...? Some people are fine with doing local work
on one antenna. Others seem compelled to have a tower farm. Again,
oppurtunites are endless, and so is the price tag.
As far as experience goes with equipment, stay away from the Radio Shack
HTX-252 2 meter (144MHZ)25 watt mobile radio. It only has 10 memories and is
a POS! Price the same as the Icom 2100, with 100 memories, 50 watts of
power, dual color display. Etc etc.

$200 will get you a decent 2 meter rig and antenna for the car.
$250 same rig and base antenna for house.
Again, depending on what you want will depend on the price.
Good luck and happy hamming.
Mike

Purchase what you can afford for use on bands you want to use. Chances are
you will get the most "bang for the buck" out of an HT as your
first rig. I went with a Kenwood TH-F6A as my first rig when I got my
ticket back in January. I've since added a couple dual band mobile rigs to
my equipment list. If I were buying an HT now, I'd probably go for the
new Yaesu.

I have new old stock NE-51 neon shorts bulbs from 1964 available.

these are the shorts bulbs used on TV-2 series military tube testers and are
also the pilot lamp on the TV-2

they are also the shorts bulb on Hickok 539C and 533A as well as some Hickok
539B's and some Hickok 533's and the equivalent Western Electric and RD
Instruments testers.

the NOS NE-51's are 2 for $6 - free shipping

also have a few NOS NE-45 from 1966 for $11 each for TV-7, TV-3, and TV-10
and many Hickok models.

I also stock #81, #47, #49, #12, #44, #51 #46 etc. new old stock

write me at cacheoverflow@yahoo.com

cheers!

Years ago I had a Heathkit HW 101 and while tuning with a portable antenna I could make my TV screen go blck from a distance of about 25 feet. It was kind of interesting back then. I wondered if it affected anyone else in my apartment complex.

Howdy, Folks.

This weekend is quite active on the Amateur Radio bands. The ARRL 160-Meter Contest starts at 2200 on 5-XII-2003 UTC to 1600, 7-XII-2003 UTC, while the PSK Death Match starts at 0000, 6-XII-2003 and runs until 2400 7-XII-2003 on 80, 40, 20, 15, 10, and 6 meters. The TARA RTTY Melee runs from 0000 to 2400 on 6-XII-2003 on 80, 40, 20, 15, and 10 meters. There's also the TOPS Activity 80m Contest, which starts at 1800 on 6-XII-2003 and runs to 1800 on 7-XII-2003 in CW only on 80 meters. Finally, there's the QRP ARCI Holiday Spirits Homebrew Sprint that runs from 2000 to 2400 on 7-XII-2003 in CW mode only on 160, 80, 40, 20, 15, and 10 meters.

What is the propagation outlook on the High Frequency (HF) bands during this weekend?

Earlier, today (5-XII-2003 UTC), between 0100 and 0300, a weak shock wave was detected that indicated the arrival of the glancing blow from the coronal mass ejection from the prominence eruption on 2-XII-2003. The geomagnetic field activity increased to minor storm levels with a planetary K index reaching 6. Since, the geomagnetic field activity is remaining at the active (Kp of 5) level. After about 1200 UTC, the solar wind speed further increased, and the interplanetary magnetic field has remained moderately to strongly southward in its orientation. This will continue to keep the geomagnetic field active to somewhat stormy.

There has been no clear influence of the small coronal hole that is now situated moving closer to the western limb of the sun. However, another large coronal hole is moving into a position that will directly increase the solar wind speed and therefore possibly influence the geomagnetic activity starting today. This coronal hole, originally numbered CH66 and now numbered CH71 by Jan Alvestad, was geo-effective in previous 27-day solar cycles. The leading edge of the coronal hole is now at the central meridian. Soon, the solar wind speed will become even stronger, with the possibility of strongly negative (southward) interplanetary field orientation as this coronal hole moves fully into a geo-effective position.

The geomagnetic field is expected to be quiet to active on 6-XII-2003, increasing to minor storm levels, off and on, from 7-XII-2003 through 15-XII-2003. This will cause the highest HF bands to become degraded and unreliable. At the same time, we don't expect much flare activity, so the middle to low HF bands will be in fair to good condition.

That means that conditions on HF this weekend will be fair to good for most of the contests and for general HF activity, except on the highest bands. Long distance low frequency HF, below 2 MHz, propagation along east-west paths over high and upper middle latitudes will remain poor, while propagation along long distance north-south paths will be fair. Above 2 MHz, to about 18 MHz, should be fair to good over most low- to mid-latitude paths, but somewhat degraded over the polar paths. Frequencies above 18 MHz will be degraded, with at least a fifteen-percent depression of normal maximum usable frequencies.

I will continue to monitor space weather and propagation conditions, reporting updates at http://prop.hfradio.org/ - the NW7US Live Propagation Center.

Happy DXing!

Amateur Radio Newsline(tm) Report 1373 - December 5, 2003

Closed Circuit Advisory

This is a closed-circuit advisory, and is not for re-transmission. Repeat, not for broadcast.

This is Andy Jarema, N6TCQ, Newsline Support Fund Administrator. As we move into the holiday season, we ask that you include Newsline on your list of giving. This is the first request we've made since April, and we'll be back in the following weeks to thank everyone that helped in that campaign. But with support in the months since that campaign only averaging between $200 and $250, and with our normal monthly expenses of between $600 and $800 each month to bring you the latest news on Amateur Radio, you can see where the math is headed.

The address for the Newsline Support Fund is Newsline, PO Box 660937, Arcadia, CA 91066. If you missed that, it will be given again at the end of today's newscast. And now the latest news:

**

Amateur Radio Newsline report number 1373 with a release date of Friday, December 5, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams in space fail to show up for a highly publicized operating event while hams on the ground save a life. Find out the details on Amateur Radio Newsline report number 1373 coming your way right now.

(Billboard Cart Here)

**

ON THE AIR: ISS ASTRO-HAMS A NO-SHOW FOR K6DUE COMMEMORATIVE EVENT.

What if you planned a party but your host never showed up to open the door and turn on the music. This is essentially what happened to the ARISS folks the weekend of November 29th and 30th in regard to the kickoff of its NA1SS special event tribute to the life of Roy Neal, K6DUE. But it was not completely unexpected. Amateur Radio Newsline's Norm Seeley, KI7UP, has the rest of the story:

The event was to get underway on Saturday, November 29th during as the space station passed over the US West Coast.   ARISS International Chairman Frank Bauer, KA3HDO, says that Expedition 8 Commander Mike Foale, KB5UAC, had even been supplied with a list of potentially good radio passes and the frequencies where to call the I-S-S had been published world wide a few weeks ago. Stations on the ground were even asked to keep their Q-S-O's as brief as possible so that the greatest number of hams possible could make contact with the space travelers.

And so it was that hams world wide were ready to honor K6DUE by making contact with the station in space that his years of effort helped to create. But over the entire weekend there were no reports of voice contacts with either Foale or his crewmate Alex Kaleri, U8MIR. Nor was the RS0ISS automated packet robot station activated either.

Why the crew was a no-show remains a mystery.   Frank Bauer is certain that Foale knew about the event. In fact a message was received from KB5UAC that said he would try to be on the air for about 2 passes each weekend of December for the event. Bauer also received confirmation that final information regarding this past weekend was uplinked to the ISS crew on Friday, November 28th.

Bauer says that ARISS has discussed the situation with NASA. He says that there are two events that could have kept Foale from getting on the air. The first revolves around a broken exercise treadmill that KB5UAC reportedly spent a lot of his own time fixing this past weekend. The other is the widely reported crushing noise heard by the crew last week. It was in the aft end of the Service Module and its possible that the crew might have gotten instructions from the Russian team to determine the cause. This is being checked out.

Either way, Bauer reminds everyone that last weekend was only the kickoff and that the event commemorating K6DUE's contributions to manned ham radio space operations and that the event continues through the end of the month. He also says that ARISS will alert the ham radio community of potential opportunities for contacts as they become available.

For the Amateur Radio Newsline, Norm Seeley, KI7UP, in Scottsdale, Arizona for the Amateur Radio Newsline.

--

It should be noted that when it made the original announcement several weeks ago, ARISS said that crew participation in the event was completely contingent on the schedule of the on-orbit duties and other issues that might crop up on board the orbiting space station. (ARISS)

**

RESCUE RADIO: LA HAMS ASSIST CARDIAC VICTIM

Ham radio has helped to save the life of one of its own. This, as members of a Southern California repeater respond to a users call for assistance. Amateur Radio Newsline's Mert Garlick, N6AWE, has the details:

--
Almost every ham has heard of the Los Angeles 147.435 MHz repeater. Some call it notorious. Others have given it the nickname of "the animal farm" for the lack of discipline of its users. But on Sunday night, November 23rd, some of the tarnish turned to silver as bad manners gave way to human kindness and a life was saved.

--
Elmer: "We were all sitting around and listening to the radio as we usually do in an evening. All of the sudden, an individual keyed up a microphone whom we were all aware was having some health problems. One of our listeners, Alan Sanchez, KC6QXA, immediately noticed the distress in this persons vloice. He keyed up the mic and asked if he was OK. He indicated he was having some difficulty breathing and needed help. So, Alan immediately called Faith Gonzales who said to call 911 immediately because she was also very familiar with thisd gentlemans health problems
--

That's Gary Elmer is KG6DVO. He recently took over the system. And according to Elmer, the work of his users did not end there. While medical aid was in route, Mike Stavropoulos, KD6JTD, headed over to where the stricken ham lives. He helped him get up, opened the security gate for the paramedics and directed them to the apartment. Mike then followed the ambulance to the hospital and filled medics in on the hams condition.

Later that evening, the hospitalized ham went into cardiac arrest. He was revived by his doctors. Had he been at home the chances are that he would now be a silent key now.   Gary Elmer says that he is very proud of his users:

--

Elmer: "You know we like to tear it up and cut up, and have a good time. And you know that some people might of the fun we have. And yes, we have been in trouble with the FCC, but you know, when called upon, we too can rise to the occasion as evidenced by the actions of those three amateurs the other night."

--

As we go to air Elmer says that the ham is still in the hospital recovering. More important he is alive thanks to his friends on the Los Angeles 147.435 MHz repeater.

For the Amateur Radio Newsline, I'm Mert Garlick, N6AWE, also in the City of Angels.

--

In past years the Los Angeles 4-3-5 repeater has received a lot of negative press. This time the press is positive because this time it and its users probably saved a life. (ARNewsline(tm))

**

COORDINATION: REVISED SOCAL 2-METER BANDPLAN NEARING APPROVAL

Still in the Golden state, December 6th was the date set for a vote on a revised 2 Meter bandplan proposed by TASMA, Southern California's Two Meter Area Spectrum Management Association. Amateur Radio Newslines Bruce Tennant, K6PZW, gives us a sneak peak:

--

Among the problems the revised bandplan seeks to correct is recognition of the work of neighboring coordination councils. TASMA has always officially acknowledged the Northern Amateur Relay Council of California, but not those serving the states of Arizona and Nevada. California shares borders and R-F with those states and the revised TASMA bandplan will provide for such political recognition.

Also to be considered will be frequency assignments for specific modes and updating the recognized manned space operations listings. This to conform the Southern California bandplan with the world in relation to current Amateur Radio International Space Station operations.

This revised plan is the product of 2 years of hard work by the regional coordination body written with significant input from the areas Amateur Radio community. It already received a thorough public review at the 2003 ARRL Southwestern Division Convention last September.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

For more information please visit www.tasma.org. (TASMA, ARRL SW Commuinicator)

RESTRUCTURING - SOUTH AFRICA: PROPOSED CHANGES TO LICENSE REQUIREMENTS AND PRIVILEGES

Another nation has taken the first steps in restructuring its Amateur Radio service. We have this report on what South Africa has done so far in welcoming codefree operations:

--

South Africa is taking a look at how to handle the question of Morse code testing until such time as it goes away and it looks as if it has an answer. It comes in a proposal to lower the Morse requirement from 12 to 5 words per minute. That is until applicants for the South African Zed U license will no longer need be tested for proficiency in Morse code.

Also proposed is the introduction of a new license class with the callsign prefix ZT. This license will not have any Morse code requirement. Rather, the holders of ZT licenses would have full VHF privileges and will be permitted to transmit with a maximum power output of 100 W on portions of the 160, 80, 40 and 15 meter bands.

For the Amateur Radio Newsline, I'm Ken Locke, N8PJN.

--

This interim solution would hold in South Africa until a final disposition on the future of Morse testing is made by that nations telecommunications regulators. (Q-News)

**

THE VEC PROGRAM: NEW GENERAL CLASS QUESTION POOL RELEASED

If you are planning to take a United States General Class written exam after next July 1st or know someone who is, then listen up. On and after that date tests will be based on a new set of questions just released by the Question Pool Committee of the National Conference of Volunteer Examiner Coordinators.

According to a news release from the committee, changeinclude the number of questions increased to 432 and release pf the pool in both Microsoft Word and ASCII text formats with no graphic files. Look for the new questions in cyberspace at www.arrl.org/arrlvec/pools.html. (W4WW, NCVEC)

**

RADIO LAW: COMPLAINT LEVELS TO FCC RISE

The United States FCC has released a report on the inquiries and complaints processed by its Consumer & Governmental Affairs Bureau during the third quarter of 2003. According to the report complaint activity increased within all major areas except cable during the third quarter.

The largest increase occurred within Radio and Broadcasting where a total of 19,920 indecency and obscenity complaints were received. Complaint activity was also higher in all five top wireless categories, with the largest percentage increases coming in the service quality and equipment section. Its all in cyberspace at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-241435A1.doc (CGC)

**

ENFORCEMENT: YET ANOTHER TOWER FINE

The fines for tower related violations continue. The latest is an $8000 fine issued to the Barinowski Investment Company, L P. Barinowski is the owner of a tower located near Savannah, Georgia. It was cited for failure to clean and repaint its antenna structure to maintain good visibility. (FCC)

**

EMERGING TECHNOLOGY: NET-BY-PHONE NOW PLAYS MP3

The HandiHams say that there is now an MP3 file playback feature on the Net-By-Phone service that allows blind users who do not own a computer to access the Internet. This, by using a plain old vanilla telephone.

By way of example, a Net-By-Phone user accessing a website like Amateur Radio Newsline that has a link to an MP3 file can hear that file over the phone by simply selecting it. The system does not play the file right away, but it will download the file in the background and send you an e-mail when it is ready. When you retrieve the e-mail, the file will automatically play, just as a voice e-mail from a Net-By-Phone customer plays automatically.

Net-By-Phone is located in Chicago and is a fee based subscription service. You can find out more on the web at www.net-by-phone.com or call the toll free demonstration line at 1-800-358-7858. (HandiHams)

**

HAM TRAINING: TRAIN THE TRAINER

49 youngsters are now licensed hams and are the newest members of Pennsylvania's Trinity High School Radio Club. This, thanks to a program called "Train the Trainer" by Pete Di Volpi, K3PD, a teacher named Sean Barnes, N3JQ and the Harrisburg Radio Amateurs Club V-E Team.

TheTrinity High School Radio Club operators station KB3JAG. Barnes started the radio club so lower classmen could get exposure to the hobby before they attend his physics class. He notes that the schools physics program and the principals of amateur radio teend to integrate very well.

The Harrisburg Radio Amateurs Club is a Special Services club in central Pennsylvania. It has only 100 members, but has seen over 100 new licensees produced in the last two years from their V-E and Train the Trainer programs. Teachers that are interested in Sean Barnes curriculum can e-mail him to SeanBarnesPolo@aol.com (W3UU, K3PD)

**

HAMFESTS AND CONVENTIONS: FT.TUTHILL BECOMES WILLIAMS HAMFEST

The Ft. Tuthill Arizona hamfest has changed its name, its location and its date. Now the Williams Hamfest and ARRL Arizona State Convention, this premiere event will be held next July 2nd to the 4th, at the Williams Rodeo Grounds, Williams Arizona.

According to a news release from Mark Keshauer, N7KKQ, the move means that the hamfest sponsors can provide lower fees for tailgaters and campers, bigger spaces, a fireworks display and free admission. Most important, the famed Saturday night B-B-Q which is a staple of this show -- will continue.   Sorry, that's not free but is among the best feeds found at any hamfest in the United States.

More information is on-line at www.arca-az.org/arca/images/press%20release (N7KKQ)

**

HAMVENTION 2004: THE YEAR OF THE CONTACT

Hamvention planners have announced that the theme for 2004 will be the "Year of the Contact," and they are starting out by improving their own. Amateur Radio Newsline's Bill Pasternak, WA6ITF, has the details:

--
According to Hamvention General Chairman Gary Des Combes, N-8-E-M-O, his team has been making numerous changes to the shows web site, This, so that things like exhibits, general admission ticket sales and Flea Market spaces can be handled on line and the necessary forms simply

downloaded.

And yes, we did say Flea Market rather than Outside Exhibits. As regular listeners know, a number of years ago the Hamvention made the name change to Outside Exhibits. Only one problem. The ham radio public never bought in to that new upscale title.

Hams have always referred to the Hamvention Flea Market as -- well -- the Flea Market. So, taking a cue from the many radio amateurs who have responded to the Hamvention request for input, show planners have gone back to the future. Des Combes says that as of now, the Flea Market is the Flea Market, once again.

Gary Des Combes tells Amateur Radio Newsline that this is only the first of a number of "Going Back to the Future" changes that the public has asked for and that they will get. In fact, "Going Back to the Future" will be a sub theme during Hamvention 2004.

The dates are next May 14th to the 16th. The location is the HARA Arena in Trotwood Ohio just outside the city of Dayton.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, reporting.

--

Lots more information is on-line at www.hamvention.org. (Hamventionr)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAMS HELPING: THE NORTH POLE NETWORK

The holiday season brings hams a great opportunity. What better way could there be to introduce hospitalized children and their families to the magic of Amateur Radio--and to spread holiday cheer--than to arrange to have Santa visit them via Amateur Radio? Newsline's Joe Moell, K0OV, tells us about the North Pole Network.

--

Kids at Childrens Hospital of Orange County get holiday visits from clowns, carolers, firemen, baseball players and rock stars. But nobody is more welcome and anticipated than the ten Amateur Radio operators who arrive on the weekend just before Christmas. They come to establish a special ham radio link that makes it possible for patients to talk directly to the "real" Santa in his office next to the big toy workshop at the North Pole.

Members of the Hospital Disaster Support Communications System have been visiting children and adults in Orange County hospitals for over 25 years, and we think there's no better way than this to spread holiday cheer while showing our hobby in the best possible light.

Will your club be part of the North Pole network this year? If so, we have some suggestions for you. For instance, personalize each QSO. It would be easy to just put the mike in front of a little girl and instruct her to tell Santa her name and where she lives. But imagine how much better the QSO will be if Santa calls her by name right from the start. He's Santa Claus, so he should know! Before each year's North Pole Network session begins, the hospital therapists provide our North Pole station with the list of names for every room and bed, along with plenty of other tidbits about the kids that make good conversation starters for Santa.

You'll find lots of other hints for your best North Pole Network ever at our group's special Web site. The URL is long, but you can get to it with one click from the Hospital Disaster Support Communications System site at www.hdscs.org

The most important hint we have for you is: Don't miss the miracles. Every year, we have had at least one extra-special encounter that astonished families, staff and the hams. In a Santa QSO, children have spoken for the first time following brain trauma. Fevers have broken shortly after North Pole Network visits. A head injury patient started to eat after being encouraged to do so by Santa, and so forth. We don't know exactly how much the personal contact with Father Christmas has aided in patients' recoveries, but we are always grateful that our hobby can add a little joy and holiday spirit to patients and their families.

Again, the Web spot to visit is HDSCS.org, short for Hospital Disaster Support Communications System. From southern California, this is Joe Moell Kay-zero-Oscar-Victor for Amateur Radio Newsline.

--

More on this and other ham radio holiday activities in the coming weeks. (K0OV, ARNewsline(tm))

**

INTERNATIONAL - AUSTRALIA: VK2BVS HONORED BY VK PRIME MINISTER

Australia's Prime Minister John Howard and Foreign Minister Alexander Downer expresses gratitude for Australian ham radio training in developing countries. This, by way of a certificate sent to Sam Voron

VK2BVS in which the Australian Government expresses its gratitude to Voron for a valued contribution towards assisting developing countries to reduce poverty and achieve sustainable development.

The honor was bestowed on Voron for the six months he spent in Somalia where he organized an Amateur Radio training course. In addition to Howard and Downer, the certificate was signed by Dr. Brendan Nelson who is a member of Australia's Parliamentary House of Representatives. (QRZ.COM)

**

INTERNATIONAL - SWEDEN: NEW PAN-EUROPEN TV SHOW ON ITS WAY

Ham radio in Europe will soon have a TV show of its own. Jeramy Boot, G4NJH, is in Nottingham, the UK, with the rest of the story:

--

The Swedish-based 'Club-TV' wishes to establish a monthly amateur radio magazine programme to be transmitted via digital satellite TV to most of Europe. Club-TV wants to cover all aspects of amateur radio and thinks there is a number of amateurs around Europe who can handle a video camera and edit the result.

Videos of 10 to 20 minutes would be perfect. There is no cost involved other than the tape as the broadcasts receive commercial sponsorship.

During the past year Club-TV has carried out a number of tests and broadcast a couple of programmes. The transmission is via the Sirius 2 satellite at 5 degrees East with a Symbol Rate of 6667 and FEC 1/2.

Jeramy boot, G4NJH.

--

Jeramy says that inquiries go to Ben Jockert, SM6CKU, by e-mail to sm6cku@parabolic.se. (GB2RS)

**

ON THE AIR: NEW VHF/UHF PROPAGATION BEACONS NEAR ATLANTA

Back in the United States, Gary Bailey, WA4IOB, invites VHF operators to listen for his new 2 meter and 70 centimeter beacons. The transmitter are located in grid E M 73 near Snellville, Georgia about 25 miles east of Atlanta. The mode is CW on 144.285 MHz and 432.352 MHz with 2 watts output on each band. The 2 meter transmitter feeds a horizontal square loop. The 70-centimeter antenna is 4 half wave dipoles in a 90-degree horizontal quadrature configuration feedwith a 4-way power splitter. Both sign the call B B B W-A-4-I-O-B slash E M 73. Signal reports go to grb734@bellsouth.net (VHF Reflector)

**

DX

In D-X, LA5RIA will be active as JW5RIA from Bear Island until June of JW5RIA will operate on 160 to 6 metres CW, SSB and digital modes. Q-S-L as directed on the air. (RSGB)

Also, eight American operators are active from Christmas Island, East Kiribati, until the 7th of December. Call signs to listen for are T32MP, T32WW, and several others on all bands using all modes. They will have three stations with amplifiers and a large selection of antennas to pipe their signals worldwide. (RSGB)

**

THAT FINAL ITEM: A KILLER RENEWAL

And finally this week, the story of a ham who might have a hard time attending a license renewal hearing. Thats because he is in jail. Amateur Radio Newsline's Don Wilbanks, AE5DW, has more:

--

According to the ARRL Letter, the FCC has issued an Order to Show Cause to a Texas ham who is currently serving a 32-year prison sentence for the 1996 murder of his wife. The order released November 21st is the governments opening salvo in a hearing process that could end with the revocation of the Advanced class license of Roger Thomas Scaggs, W-5-E-B-C.

The FCC says that Scaggs' murder conviction raises very serious questions as to whether he possesses the requisite character qualifications to remain a Commission licensee. It also causes the agency to question whether his license should be revoked.

Scaggs is 64. He apparently was able to renew his ham ticket in the spring of 1998. This is the same year in which he was later convicted of murdering his wife. The FCC granted Scaggs' application for an administrative update. In this case, apparently a change of address from Austin to Gatesville, Texas.

The FCC only recently became aware of Scaggs' murder conviction, which could keep him behind bars at least until he's 75. Assuming that Scaggs indicates that he will appear for or be represented at a formal hearing, the FCC will follow up with a Hearing Designation Order.

The session itself will be held before an Administrative Law Judge and would consider evidence concerning the effect of Scaggs' felony conviction on his qualifications to remain an FCC licensee. If no action is taken Scaggs license will next expire in 2008.

For the Amateur Radio Newsline, I'm Don Wilbanks, AE5DW, in New Orleans.

--

Scaggs was given the customary 30 days to let the FCC know whether he plans to appear at the hearing. (ARRL)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Meachen, ZL2BHF, saying 73 and we thank you for listening. Amateur Radio Newsline(tm) is Copyright 2003. All rights reserved.

You need to pull the data sheets for both parts and compare the input and
output level requirements. Often the "can" oscillators have TTL outputs, but
the AD9850 wants CMOS or AC-biased at midpoint. Both should work.

When you say "does not work" do you mean wrong frequency, or completely
dead?

QSL - "Message received", or "Did you receive my message?"

Also refers to a post card commonly exchanged by amateur radio operators after
a contact, which contains information on the contact, such as date, time, freq,
mode, etc... (A QSL card).

Try the ARRL site.
www.arrl.org and Q signals.  There is a long list of them.
They were originally developed as a short hand for CW, but most are
used on voice as well.

I have no idea as to the origin of DX and DX ing.
DX = Distance contact, or countries other than your own...There are a
number of interpretations, but all mean distance in one way or
another.

You'll have to fix the return add due to dumb virus checkers

Others have already given you the definitions. I just want to add that these are not acronyms or abbreviations. The letters do not stand for words.

They are simply groups of letters with defined meanings. There is an extensive list of 3 letter groups beginning with Q that are used in CW to convey various meanings.

Hi Steven,

With the 66 MHz oscillator (the datasheet states TTL/HCMOS
compatible), the setup works fine. But when I connect the 100MHz (no
datasheet) oscillator, the display, shaft-encoder etc work fine, but
there is no output (dead). Any ideas what I should be looking at
incase I purchase another oscillator ?

>-73
>DE Vasudeva (VU3BIP)

Two possible things:

1: The oscillator starts up badly. Try send a reset pulse to the AD9850 about 100ms or so after the circuit is turned on. This is a good idea no matter what oscillator.

2: the levels are bad. You can AC-couple the oscillator to the AD9850 by using a cap in series with the oscillator and using a couple of 1k resistors to bias the input pin at 1/2 Vcc.

You can also try a "quick fix." Add a 470 ohm resistor from the clock input line to the Vcc on the AD9850, this will "pull-up" the clock signal a bit.

You can email me if you have further questions. Novatech used the AD9850 in our DDS5m and DDS6m products.

Steve

Could anyone point me in the right direction for finding a callsign databook for 1985 to 1995? My ticket expired in 1995 and I want to present proof of my novice license when I take the written exams.
Thanks
Kelly

I have a 1992 callbook, I guess I could copy or tear out the page you're on
so long as it's not on the same page I'm on. :)  Email me and I'll take care
of it if you think that'll do it.

My old callsign was KA8JGX. A photocopy is all that I need. I can send
you a SASE if you need?
my email is kmaiden@columbus.rr.com
many many thanks.

NOT USING YOUR ANTENNA ANYMORE?

IS YOUR RIG COLLECTING DUST?

LONG ISLAND MOBILE AMATEUR RADIO CLUB IS

LOOKING FOR DONATIONS OF AMATEUR RADIO GEAR FOR

EMERGENCY COMMUNICATION. WE ARE LOOKING FOR LOW

BAND YAGIS LIKE THE MOSLEY TA-33 OR TA-33 JR, AND
```

VERTICALS, RADIOS, ROHN TOWERS OR VARIOUS CRANKUP
TOWERS TO USE FOR EMERGENCY COMMUNICATION AND
FIELD DAY.

IF YOU DONATE SOME EQUIPMENT TO OUR CLUB, YOU WILL

GET A GENEROUS TAX LETTER, AND YOU'LL BE HELPING A

WORTHY CAUSE.

EMAIL AND LET US KNOW WHAT YOU HAVE!

THANKS IN ADVANCE

I have a good condition 9/10 cosmetically, 10/10 functionally. With whip rubber duckie, Kenwood rapid charger and 1 good battery. I will sell for $95 shipped CONUS. Photo upon request

Also for sale, cleaning up:

I was given a new RS pro-96 for a present. We do not have digital here. I am selling it since I already have a BC780XLT. The package is complete from RS, box, manual, antenna, clip and regulated external PS. I will sell the package for $490 shipped. POSTAL MO only. I do not use paypal.

Also have Motorola trunking base and some P110 UFH portables. Photos available for all

Coalition Provisional Authority (CPA)
Ministry of Transportation and Communications

Iraq Amateur Radio License

In accordance with Coalition Provisional Authority Order 11 effective 9 June 2003, under the laws and usages of war, and consistent with relevant United Nations Security Council resolutions, including Resolution 1483 (2003), the frequency spectrum licensing authority in Iraq is the Ministry of Transportation and Communications.

Under this authority, the amateurs listed herein are hereby authorized to operate a station in the amateur service and amateur satellite service anywhere in Iraq, and with full amateur privileges following the amateur rules and regulations of Iraq as they may be written, the Region 1 band plan of the International Amateur Radio Union, and the Radio Regulations of the International Telecommunication Union, using the call signs listed.
This license is effective on the date of this approval and expires five years from such date.

Though it took me way too many years to accomplish, I finally got off my butt and upgraded my Tech Plus to General this morning.   Thankfully I didn't have to retake the CW test again or I'd still be sitting at Tech Plus. Woo hoo! :)

Jerry (just call me stroke AG ;))

Message-ID: <20031121141015.28617.00000553@mb-m11.aol.com>
Xref: archiver1.google.com rec.radio.amateur:6003

I have a Connex 3300 radio that i am willing to sell. The radio is in good working condition. It has a roger beep installed, with a switch for it on the right side of the radio. It also has a toy that honks a semi horn 2 time then says "Hey get out of the way stupid!". I have a road king mic for it. It will aslo come with a midland external speaker for it. The radio has Am/Fm band and PA. It has 240 channels.

I had it listed on E-bay and the auction was ended, becuase it is a problematic radio since it is considered a 10 meter radio. But if you are intrested in buying it feel free to E-mail me at "mrnmrscody@aol.com". The radio is about 6 month old, unfortunatley my house burned down sept. 26 and I do not have the original box or paper. Radio was saved since it was in my big truck! I hate to sell it but with everything going on in my life I am forced to sell it.

Steve Cody II

Too much light pollution here in Northeast PA, couldn't see a damn
thing even during that mega flare we had a few weeks ago.

I went out on that one, but it was too late in the evening.
Apparently the best time is not much after local sunset.

I'm glad I finally saw one, but it sure felt wierd looking at the northern
lights, in the south!

```

Howdy,

The high geomagnetic activity that occurred during the passage of the coronal hole mass ejection (CME) from 18-XI-2003 has decreased, and remained at low levels for the last few reporting periods. At the same time, the 10.7-cm flux is greater than 170. Solar wind speed at the time of this writing is just over 550 km per second, with a slightly negative interplanetary magnetic field horizontal component orientation (the Bz is -2.8 nT). This has led to fair HF signal propagation, with normal propagation conditions over low-latitude paths, fair propagation over mid-latitude paths, and fair to poor propagation over high-latitude paths.

The coronal mass ejection observed in association with the M9-class flare of 20-XI-2003 is likely to glance the Earth's magnetosphere during the later half of 22-XI-2003 UTC. This CME should combine with an anticipated high coronal hole solar wind stream to produce further minor storm activity. The expected elevated solar wind speed is a result of a coronal hole that is now in a position where it is spewing plasma directly into the Earth's direction. The combination of the higher solar wind speed and the glancing of the arriving CME will lead to active to minor storm levels from late 22-XI-2003 UTC and into 23-XI-2003 UTC. There is a slight chance of the geomagnetic field to reach major storm levels at some latitudes during this weekend.

The 10.7-cm flux levels are expected to continue to rise slightly to a maximum of about 200 over the next day or so. The >10MeV proton flux levels have been remaining moderate. According to the POSE observations at the time of writing this bulletin, however, there is a very little polar cap proton presence. When very energetic protons (>10 MeV) produced by processes at the sun and interplanetary space arrive at Earth and enter the atmosphere over the polar regions, ionization is greatly enhanced at altitudes below 100 km. Ionization at these low altitudes is particularly effective in absorbing HF radio signals and can render HF communications impossible throughout the polar regions. Since we are not seeing significant wide-spread proton activity right now over the poles, E-layer ionization is mostly normal at these high latitudes.

The big sunspot groups from late October and early November, now numbered 501, 507, and 508, are quite a bit smaller this time around. However, they do have enough magnetic complexity to produce M-class flares. There is a sixty percent chance of an M-class flare, and a fifteen percent chance of an X-class flare. Most of the flares expected will be in the C-class range. This will mostly impact the lower frequencies on the sunlit side of the Earth.

HF propagation conditions will continue to be fair to normal for most of today (22-XI-2003 UTC), but will slightly degrade late in the day and into Sunday. Late Sunday, conditions may improve slightly, and then by Monday should again be mostly normal over all latitudes except for some degradation over the poles.

VHF propagation is expected to be quiet with very slight chance of any Auroral. However, there might be a slight chance of some F-layer openings, and of transequatorial propagation during the afternoon and evening hours local time. There have been some reports of Sporadic-E, but openings are expected to be rare.

More information as events warrant will be posted in follow-up bulletins. Live information is on-going at http://prop.hfradio.org/ and a discussion is at http://hfradio.org/forums/

Amateur Radio Newsline™ Report 1371 - November 21, 2003

Amateur Radio Newsline report number 1371 with a release date of Friday, November 21, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Australia says goodbye to the Morse code and the FCC says hello to a new way to regulate interference. Find out the details on Amateur Radio Newsline report number 1371 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: AUSTRALIA GOES CODE FREE

Australia is joining the no-code revolution. Q-News Graham Kemp, VK4BB is down-under with the details:

--

The Australian Communications Authority (ACA) is reviewing regulatory and licensing arrangements for the amateur service. A discussion paper was released in August 2003, and public meetings were held in 10 cities around Australia. As a result of this extensive public consultation process, the ACA has decided to discontinue the Morse code proficiency requirement for the amateur service.

Background: Article 25 of the Radio Regulations of the International Telecommunication Union sets out the international arrangements for the amateur service.

The World Radiocommunication Conference (WRC) held from 9 June to 4 July 2003 in Geneva fundamentally changed Article 25. The changes to Article 25 have provided the ACA with an opportunity to review and simplify the current regulatory and licensing arrangements for the amateur service. In August 2003 the ACA released a discussion paper that looked at the changes made to Article 25, as well as exploring future options for the amateur service in Australia.
Morse code proficiency requirement to be removed As a result of an extensive public consultation process, the ACA has decided to discontinue the Morse code proficiency requirement for the amateur service. This decision was made considering public comments at the meetings and initial analysis of submissions to the discussion paper.

The ACA will make interim changes to legislative instruments which will immediately allow access to privileges previously available only to those satisfying Morse code proficiency requirements. The ACA is in the process of amending the amateur radio licence conditions specified in the Radiocommunications Licence Conditions (Amateur Licence) Determination No. 1 of 1997 to reflect this decision. The amendments will give holders of Intermediate and Limited Amateur licences access to the same frequency bands as Unrestricted Amateur licensees; and holders of the Novice Limited Amateur licence access to the same frequency bands as Novice licensees.

The interim arrangements are expected to come into force on 1 January

2004.

I'm Graham Kemp, VK4BB, of Q-News Australia for the Amateur Radio Newsline.

--

More on this in future Amateur Radio Newsline reports. (Q-News: Note: Print version is expanded from audio report)

**

RADIO LAW: FCC LOOKING AT NEW INTERFERENCE STANDARD

Turning to regulatory news here at home, word that the FCC is looking at another way of determining what it calls acceptable interference levels. Termed "interference temperature," the Commission says that this is a new model for addressing interference that takes into account the actual cumulative R-F energy from transmissions of spectrum-based devices. It would also set a maximum cap on the aggregate of these transmissions.

To test the potential usefulness and applicability of this approach the agency has issued a Notice of Proposed Rulemaking. FCC docket item 03-289 seeks comment on various technical rules that would establish procedures and use the interference temperature model on a limited basis in the 6525 to 6700 MHz and portions of the 12.75 to 13.25 GHz bands.

According to the FCC, the "interference temperature" approach may facilitate more intensive use of the radio spectrum, creating the opportunities for new services and improving the predictability of any interference to existing services. The current approach for managing interference focuses on specifying and limiting the transmit powers of individual spectrum based devices. What impact the adoption of an "interference temperature" standard might have on Amateur Radio operations has yet to be determined. (CGC Communicator, ARNewsline(tm), other published reports)

**

REGULATORY NEWS: FCC APPROVES WIRELESS INTERNET IN HAM SPACE BAND

The FCC has turned down an ARRL request to keep so-called wireless Internet connections out of the 5.650 to 5.670 Gigahertz to avoid interference with the Amateur Satellite Service. This, as the regulatory agency makes another 255 MHz of spectrum available for Wi Fi use. Bill Pasternak, WA6ITF, reports:

--

In a Report and Order in ET Docket 03-122 released on November 18th, the FCC says it was taking action to alleviate crowding in existing wireless Internet allocations. Also, that it wanted to align wireless Internet connectivity here in the United States with the rest of the world.

Amateur Radio has a secondary allocation from 5.650 to 5.925 Gigahertz. That includes a 20 Megahertz wide satellite downlink segment from 5.830 to 5.850 Gigahertz.

An ARRL Bulletin says that back in September the League expressed concerns about the potential for interference from these wireless devices to Amateur Radio space operations. But in releasing its decision, the FCC says that its dynamic frequency selection and transmitter power control requirements should be adequate to protect amateur operations. This, even though the FCC admits that they are not specifically designed to do so.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

In rendering its decision the FCC said that it was not persuaded that it should either add to or modify its proposed rules as requested by ARRL. The Federal government itself is the primary user of the entire band. (ARRL Bulletin, FCC)

**

RADIO LAW: FCC COMMISSIONER'S OFFICE CLARIFIES HER "BROADBAND NIRVANA" REMARKS

The office of FCC Commissioner Kathleen Abernathy has expressed regrets that her remarks in a September speech may have failed to make her concerns about potential interference from Broadband over Power Line sufficiently clear. Responding to complaints from the ARRL and individual amateurs, Abernathy's Senior Legal Adviser Matthew A. Brill said that her office is sorry that the Commissioner's remarks may have been interpreted as suggesting an absence of concern over harmful interference.

The ARRL Letter says Brill has assured the League that ensuring that B-P-L and all new technologies avoids causing harmful interference to licensed R-F users is important to Abernathy. Brill termed it as a bedrock position for the Commissioner.

Last September 22nd, in a speech to the United Powerline Council's annual conference Abernathy expressed personal enthusiasm for B-P-L calling it a Broadband nirvana. That position was quickly challenged by the ARRL and others in the ham radio community. (ARRL)

**

BREAKING NEWS: EARTH HIT BY SEVERE GEOMAGNETIC STORM

A severe G-4 class geomagnetic storm is in progress as we go to air. This, due to the arrival of coronal hole mass ejections related to the returning sunspot group 484, now numbered 501 astronomers.

Thomas Hood, N-W-7-U-S, is the Propagation Editor for C-Q Magazine. In a November 20th posting to the V-H-F Reflector, Hood says that some reporting stations show a K index of 9. The current planetary K index is 8 and the Aurora index is 10. This means that there could be visual Aurora is possible at low-latitudes.

What does this mean to ham radio operations? During the storm HF conditions are poor. So will those on the Medium Wave broadcast bands. But in the world of 50 Mhz and above anything could happen and usually does. Keep your ears open, your radio on and enjoy it while you can.

Now long will this geomagnetic storm last and are more sunspots on the way? Ongoing information is in cyberspace at http://prop.hfradio.org and on the W6YX VHF Reflector.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF. (VHF REflector)

**

ENFORCEMENT: HAM ACCUSED IN WISCONSIN INTERFERENCE CASE

A peason described by authorities as a Wisconsin ham has been arrested and charged with some high tech interference to public service communications. Amateur Radio Newsline's Bruce Tennent, K6PZW, has the rest of the story:

--

The Wisconsin State Journal reports that a ham radio operator is being accused of interfering with emergency radio channels in the city of Madison over the past nine months. According to the Journal, authorities charge that twenty-five year old Rajib K. Mitra, a University of Wisconsin Madison student, may have broadcast audio from pornographic movies over the Madison Police Department airwaves.

The news article describes Mitra is a ham radio operator with a degree in computer science. He was arrested Thursday November 13th after police showed up at his apartment with a search warrant looking for radio and computer equipment and pornographic audio.

According to a Madison police spokesperson, the interference usually left the radio system dead for stretches from a few seconds to about 20 minutes but never on a regular schedule. Al Schwoegler, the Madison Communication Operations Supervisor said that this intermittant operation added to the difficulty of tracking the source.

The interference came at times when police were dispatched on calls. Authorities believe that the person jamming may have monitored police radio traffic.

Helping to track down Mitra was Ralph Pellegrini. The newspaper article identified Pellegrini is a ham operator and technician for Sprint PCS who assisted police. Authorities approached Pellegrini for assistance when they thought the interference might be coming from a Sprint cellular tower. Pellegrini in turn gave a lot of credit for Mitra's capture to those he termed as the Madison radio guys. He notes that they were able to hunt down Mitra in a city R-F environment that's pretty bad.

Mitra was in the Dane County Wisconson jail as of Friday November 14th. He has been tentatively charged with 16 felony counts of computer crimes and could also face federal charges, according to Madison police.

For the Amateur Radio newsline, I'm Bruce Tennant, K6PZW, reporting.

--

Authorities hope that Mitra's arrest will end months of frustrating interference to their radio communications system. The complete story is on-line at http://www.madison.com/wisconsinstatejournal/local/61321.php (Wisconsin State Journal, QRZ.com, others)

**

ENFORCEMENT: SKYWARN INTERFERENCE

The FCC has told an Indiana ham that he is to stay off of a 2 meter repeater dedicated to emergency alerting operations. This, in a letter to Christopher Smith, KC9CAU, of South Bend.

In the note, the agency says that it has received a complaint about Smith's on the air operation on a repeater system participating in the St. Joseph County Skywarn system. The complaint alleges deliberate interference and harassment to the repeater and refusal to refrain from attempting communications on that system.

The FCC's letter tells Smith that it expects him to abide by any demand that he stay off the repeater, as well as any other repeater where such request is made by a repeater control operator or the system licensee. Smith was given the customary 20 days from the date of the FCC's letter to reply. (FCC)

**

ENFORCEMENT: ECHOLINK EXPLANATION SOUGHT

A Florida ham has some explaining to do for comments made over a linked repeater system.   The FCC's Daryl Duckworth, NN0W, explains:

--

Duckworth: "An inquiry went to WA3QCV, Timothy Horvath, of Flagler Beeach, Florida, concerning operation on two repeaters: WB2IXR at 157.015 Mhz and KG4IDD at 145.47 Mhz that are linked through the Echolink system. The inquiry involves alleged threats and obscene language."

--

The FCC also gave Horvath 20 days from the date of its letter for him to respond. (FCC)

**

RADIO LAW: ANTI-PIRACT BROADCAST FLAG APPROVED

The government has approved a new anti-piracy system that will theoretically make it harder for computer users to illegally distribute digital TV programs on the Internet. This, with the goal is to speed the transition to higher quality digital broadcasts and ensure such programming remains free.

The five-member FCC voted unanimously to allow a "broadcast flag" to be added to digital programming to block broader distribution on the Internet on November 4th. Broadcasters and the movie industry had urged the Federal Communications Commission to take such action, while consumer groups said it will force some people to purchase new electronics. (FCC, others)

**

ON THE MOVE: HF NET RELOCATING TO IRLP

Call it a sign of the times we live in. This as Tom Mc Glinn, KO6HA, reports over QRZ.com website on big change for a long established high frequency net that's taking to a different way to communicate.

Mc Glinn says that due to the urban lifestyle of many of the members of the USS Hornet Amateur Radio Club, the group has decided to move its weekly Net from 80 Meters to repeaters that are interconnected using I-R-L-P. That's the Internet Radio Linking Project which permits the world wide interconnecting of repeaters over the World Wide Web.

According to Mc Glinn, the net has been conducting tests and they have worked out most of the bugs involved with such a move. Once completed, the U-S-S Hornet Net will hold the weekly gathering in the San Francisco Bay Area using the facilities of the 147.210 repeater in near-by Oakland. Those outside the area we will be linked in using the I-R-L-P Western Reflector.

Mc Glinn adds that anyone on the planet who has I-R-L-P access to link to the Western Reflector Subchannel 1, node 9251, on Mondays at 2030 Pacific time is invited to check in on the Net. He says that you do not need to be a member of the club to take part. (QRZ.com)

**

CONFERENCES: CSVHFS IN ONTARIO CANADA NEXT JULY

The Ontario VHF Association and the Toronto VHF Society will be hosting the 38th annual Central States VHF Society Conference. The dates are July 22nd to the 25th at the Delta Meadowvale Resort and Conference Center in Mississauga, Ontario, Canada.

2004 marks only the second time that this conference has been held outside of the USA. More information and a registration form will be available shortly in cyberspace at www.csvhfs.org and www.ovhfa.com (VHF REflector)

**

HAMVENTION 2004: AWARD NOMINATING PERIOD OPENS

Meantime, the planners of Hamvention 2004 say that the nominating period is now open for its Radio Amateur of the Year, Technical Excellence and Special Achievement awards program. The Radio Amateur of the Year is described as that special person who has made a long term commitment to the advancement of amateur radio. A well-rounded individual who has contributed most of his or her lifetime to our hobby in some very outstanding way.

A nominee for the Technical Excellence award should be a person who has made an outstanding technical advancement in the field of amateur radio. Something like a revolutionary new equipment design or mode of operation that has impacted positively on the day to day operation of many hams.

Last but by no means least, a nominee for the Hamvention's Special Achievement is the kind of special person who has made an outstanding contribution to the advancement of amateur radio. This award is usually given to a respected amateur who spearheaded a single significant project.

Documentation is beneficial. Magazine articles, newsletters, newspaper clippings, videos, etc. will better inform the Awards Committee of your candidate's accomplishments. All materials become the property of the

Hamvention and cannot be returned.

The nomination deadline is January 31 2004. You can fill out the on-line form found at www.hamvention.org by clicking your mouse on the words award nominations. Printed nominations go to the Awards Committee, Hamvention 2004, PO Box 964, Dayton Ohio, 45401.

And oh yes. The deadline for all submissions is January 31st, 2004 (Dayton Hamvention)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

NAMES IN THE NEWS: KB2GSD VS. WJMK - PART 2

A follow up to an earlier story involving retired CBS newsman Walter Cronkite, KB2GSD, and a Florida television production company that he says misled him and tarnished his reputation. This, when it persuaded him to appear in videos that promoted prescription drugs and other products.

The company, WJMK, filed suit last September after Cronkite tried to end a contract he had signed to appear as the host of a series of videos, including some called American Medical Review. In their legal brief responding to the WJMK action, Cronkite's lawyers say WJMK had assured him that the videos would be educational and would not promote corporate products. These are claims that his lawyers say Cronkite subsequently learned were false.

An attorney representing W-J-M-K, says that Cronkite's charges had no merit and that Cronkite's lawyers were trying to disparage the other side in the media. Meantime, KB2GSD has filed a counter claim seeking $25 million in damages from WJMK. (Published news reports)

**

NAMES IN THE NEWS: LONG TO AMSAT JOURNAL

Ed Long, WA4SWJ, is the new Editor in Chief of the AMSAT Journal. A licensed amateur since 1970, Ed holds a BSEE from West Virginia University and an MBA from Duke. He is currently employed by SPX Process Equipment in Delavan, Wisconsin. He can be reached by e-mail to wa4swj@amsat.org (AMSAT-NA)

**

EMERGING TECHNOLOGY: SAFETYCAST BROADCAST TO YOUR CAR

Police or fire engines may soon be able to override the radio in your car. This, as Jacksonville Florida based SafetyCast announces that it will soon test a new mobile alert system. One that will allow a police officer or ambulance driver to take over a car radio within a distance of about 1000 feet and broadcast a brief alert tone and warning message.

Emergency services officials are praising the development. They claim that there is a warning crisis because motorists in today's sound-proofed vehicles can't hear sirens, or just aren't paying attention.

But the CGC Communicator reports hearing from one engineer who's worried about the Special Temporary Authority the FCC gave for the trial. He says his studios and E-A-S receivers are located 100 feet from a highway and one block from a hospital. He feels that SafetyCast might jam an Emergency Alert System messages that are coming in. (CGC Communicator)

**

SPACE: FRENCH AND RUSSIAN LAUNCH ACCORD

France and Russia approved an accord intended to pave the way for the eventual launch of Russian rockets from a French launch pad in South America.   The agreement, signed on November 11th is the first of its kind between Russia and a European Union country and is a step toward the launch of Russian Soyuz-ST rockets from the E-S-A Kourou launch pad in French Guyana. Most ham radio satellites are orbited from the Kourou facility. (Published reports)

**

INTERNATIONAL - HOLLAND: RADIO NETHERLANDS BROADCAST CHANGE

Radio Netherlands says that its shifting the frequency of its Dutch language transmission to the Far East, East and Southeast Asia at 1300 U-T-C. This broadcast can now be heard on 7 point 380 MHz. The reason for the change is to avoid interference to the transmission. (Media Network)

**

DX

In D-X, word that ON4LAC, is active portable 3B8 from Marutius through November 23rd. His activity has been mainly on 20 and 15 meters using SSB and PSK, but is expected to be on RTTY as well. He will leave Msrutius and head to Reunion Island to be active as FR5 stroke ON4LAC during the period of November 26th and December 15th. After this activity, he will head back to Mauritius and will be active again between December 17th and 27th. QSL direct to his home callsign. (OPDX)

Also, K5LB has announced that he will be going to Swaziland next March and is looking for several operators to tag along. His plans include a trip through the Kruger Game Park. If interested, contact him at frosty1@pdq.net (OPDX)

**

THAT FINAL ITEM: VOLUNTEERISM AND THE NYC MARATHON

For the last two weeks New York City Marathon Communications Coordinator Steve Mendelsohn, W2ML, has been sharing with us the behind the scenes story of how 411 hams move the race along. In our final part in this series Henry Feinberg, K2SSQ, takes a look at the volunteers that make it all hapen:

--

The ham radio communications effort for the New York City Marathon is volunteer driven. And, as with any event, volunteers do come and go. We asked the lead volunteer, Steve Merndelsohn, W2ML, to explain how this situation gets covered:

--
Audio only. Hear the newscast in mp3 at www.arnewsline.org
--

It's primerally the local clubs that supply the volunteer ham radio communicators. W2ML says that he has a special way of introducing them to what Marathon communications is all about:

--
Audio only. Hear the newscast in mp3 at www.arnewsline.org
--

And speaking about volunteers, we asked Steve what about his own role in all this. How much of his life does he devote to setting up this all volunteer communications effort? His answer may astound you:

--
Audio only. Hear the newscast in mp3 at www.arnewsline.org
--

And there you have it. An insiders look at the massive all volunteer ham radio communications network that literally runs the New York City Marathon. It's a view that only someone who has been there every year since Amateur Radio has been involved, can give.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ

--

Our thanks to Steve Mendelsohn, W2ML, for sharing his experiences with us, and with you.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying Happy Thanksgiving, 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2003. All rights reserved.

95$ American, will get you the Ten Tec 1320 cw transceiver kit, with integrated vfo. I just built one, and it's pretty slick. Hot receiver. See the ten tec web site for details.

If you insist on using your vfo, you might look at some of the older cw vfo-less transmitters from the 50s and 60s. Of course, you would then need a receiver to go with it.

Date: Sun, 23 Nov 2003 17:29:00 GMT
Xref: archiver1.google.com alt.ham-radio.hf:3746 alt.ham-radio.vhf-uhf:20653 rec.radio.amateur:6010 rec.radio.amateur.dx:805 rec.radio.amateur.misc:2090 rec.radio.shortwave:5436

Here is my updated predictions for the CQ WW CW contest weekend (29-XI-2003 UTC and 30-XI-2003 UTC):

The solar activity that took us by surprise during the end of October and beginning of November 2003 has me revising my outlook for the CQ WW CW contest period of November 29 and 30. I am now expecting conditions to be slightly degraded compared to the forecast conditions published in the CQ Magazine. (See my latest "Last Minute Forecast" chart at http://prop.hfradio.org/)

Using the 27-day solar cycle as a guide, we are looking at Above Normal on day one, to High Normal conditions on day two of the contest weekend. Low- and mid-latitude paths will be good, while high-latitude and polar paths will be fair.

The predictions right now call for the planetary A index (Ap) to be 10 on 28-XI-2003 and 29-XI-2003, and 15 on 29-XI-2003. (Some predictions called for the Ap to remain at 15 for both contest days, making day one only High-normal conditions). The 10.7-cm Flux is predicted to be at least 165 to 180 on 28-XI-2003 and 29-XI-2003. On 30-XI-2003, the flux is expected to fall to about 160. A maximum planetary K index (Kp) of 3 is expected for both days.

Polar geomagnetic forecasts are calling for unsettled conditions for trans-polar and high-latitude propagation paths. This will make over-the-pole contacts more challenging.

Will solar flares play havouc on the bands during the daylight hours during the contest? The sunspot regions, 507 and 508, pose the most risk for flare activity. Both have beta-gamma magnetic configurations. Old sunspot region 498 is expected to return from around the sun on day one, but will still be on the very edge. It is predicted to have a beta configuration, so 498's flare risk is low.

A note about magnetic configurations of sunspot groups: Sunspots classed as "beta" groups are simple bipolar regions. "Beta-gamma" sunspot groups are more complex and consist of an irregular mixture of magnetic polarities. The "delta" magnetic configuration only occurs when two closely-spaced, opposite polarity umbrae appear within a single penumbra. This characteristic implies that magnetic field gradients are high and that respectable levels of magnetic shear may exist around the two opposite polarity umbral spots. Sunspot regions that possess the "delta" configuration are the most potentially volatile and flare-prone active regions. Some of the most powerful solar flares in recorded history (including the rare white-light flares) have issued forth from complex sunspot regions containing magnetic delta configurations.
The most complex magnetic configurations of sunspot groups is known as a beta-gamma-delta magnetic configuration.

(More information: http://sidc.oma.be/edu/classification.html) I expect that there will be minor flare activity from these regions over the contest weekend. This will impact the highest bands (10 to 15 meters).

Therefore, I expect that the higher bands will be poor to good, depending on the path: Trans-equitorial paths (N/S) will be the best, while polar paths will be the worst. The middle HF bands will be good over most paths. The low HF bands and the MW band will fair nicely, since the backgound X-ray levels are expected to be in the B-class range, and very little geomagnetic activity is expected.

Those operating in low-latitudes will have the best propagation into most areas of the world. All stations will have a slight challenge for any over-the-pole paths. Mid-latitude stations should otherwise have good conditions, while high-latitude stations will have fewer higher frequency openings.

I'll be watching things closely, and will update my predictions if warrented. You can find the latest version at http://prop.hfradio.org/

Happy DXing!

I'm trying to find a store that has the Larsen 2m/70cm on-glass antenna in NJ, but no luck yet. Anyone know any places that carry Larsen....or just might have one? :-) Thanks.

You can mail order any of the Larson antennas from AES -- check their
web site or call 'em.

Be sure you want one. Mine came with a warning that it would NOT work on a
windshield cuz the glass is too thick. Naturally YMMV.

November 24, 2003
FCC'S WIRELESS BUREAU ANNOUNCES REORGANIZATION
FOR IMMEDIATE RELEASE
NEWS MEDIA CONTACT: Chelsea Fallon at (202) 418-7991

FCC'S WIRELESS BUREAU ANNOUNCES REORGANIZATION Washington, D.C. � The Wireless Telecommunications Bureau (Bureau) announced today that it has realigned its organizational structure to more effectively support the FCC's strategic goals � Broadband, Competition, Spectrum, Media, Homeland Security and Modernizing the FCC.

The Bureau's portfolios have been redistributed along the lines of the strategic goals, consolidating similar functions to focus resources better. While improving the Bureau's ability to fulfill its mission, the reorganization also provides several benefits for managing a large and diverse organization. The scope and size of the Bureau's larger Divisions are reduced to improve managerial oversight, and organizational substructures, such as separate branches under the Division level, are eliminated. Eliminating branches provides each Division's management with greater flexibility to employ resources and create teams to address specific issues and projects. The overall result is a flatter, more flexible organization that the FCC believes will be more responsive to changes in wireless technology and the telecommunications business environment. The reorganization does not add or remove functions from the Bureau's portfolio.

From a personnel standpoint, the reorganization has been accomplished through the redeployment of existing positions. "This reorganization provides the Wireless Bureau with a structure to address the dynamic challenges facing a 21st century regulatory agency," stated John Muleta, Chief of the Bureau. "The result is a mission-driven team that will be innovative in its approach to regulatory policies and customer service."

As part of the reorganization, the Bureau now includes the following six Divisions:

o Auctions and Spectrum Access Division � Promotes transparent, efficient and effective access to spectrum, through the development of policy initiatives and legal analysis, as well as procedures and administrative capability, to implement the FCC's competitive bidding authority and the transition of spectrum to new and innovative uses. Addresses issues relating to statutory authority and objectives, Commission rules and policies, and the planning, design, and conduct of spectrum auctions. Margaret Wiener, formerly Chief of the Auctions and Industry Analysis Division, will be the Division Chief.

o Broadband Division � Facilitates the rapid, widespread deployment of wireless broadband services to rural and metropolitan areas. Consolidates the policy, regulatory and licensing functions for wireless broadband services, excluding public safety and critical infrastructure services. Joel Taubenblatt, formerly Deputy Chief of the Policy Division, will be the Division Chief.

o Mobility Division � Promotes competitive and innovative mobile radio services and maximizes efficient use of the mobile radio spectrum. Consolidates the policy, regulatory and licensing functions for wireless mobile services, excluding public safety and critical infrastructure services. Roger Noel, formerly Deputy Chief of the Commercial Wireless Division, will be the Division Chief.

o Public Safety and Critical Infrastructure Division � Consolidates wireless homeland security and public safety issues and outreach within one Division, including E911 and interoperability issues, as well as policy, regulatory and licensing functions for both public safety entities and the nation's critical infrastructure industries. D'Wana Terry, formerly Chief of the Public Safety and Private Wireless Division, will be the Division Chief.

o Spectrum and Competition Policy Division � Formulates and implements innovative spectrum, competition, and infrastructure policies that promote access to and efficient use of radio spectrum for wireless telecommunications and encourage competition in the communications marketplace. Issues include Spectrum Policy Task Force implementation, wireless/wireline convergence, secondary markets, wireless consumer policy, competition reporting, facilities and tower siting, and broad policy guidance for future technological developments. William Kunze, formerly Chief of the Commercial Wireless Division, will be the Division Chief.

o Spectrum Management Resources and Technologies Division � Combines the bureau's information technology, licensing support, and auctions support and outreach functions (currently divided between two Divisions) in order to improve planning and implementation of the Bureau's unique and highly integrated system needs. John Chudovan, formerly Chief of the Data Management Division, will be the Division Chief.

The reorganization of the Bureau was approved by the Commission November 13, 2003. An organizational chart reflecting the realignment of the Bureau is attached. Future information concerning overall implementation, division leadership and specific responsibilities will be periodically updated on the Bureau's web site at wireless.fcc.gov.

Have one in put back in the bag I'd part with, cannot use it on my
Explorer because of the glass, installed for about 10 minutes, removed
and new mounting pads put on it for next use already.

I have one National FM Adpt.(NFM-73) for sale. The unit is in good condition
and is made to plug into the back of the NC-173. The unit comes with a one foot
long octal m to f extension cable, perhaps allowing it to be used in the
HRO-50, HRO-60 and NC-183, not sure. Price is $80.00 plus shipping within
conus. Payment by money order, ups cod, Paypal(add $3.00) or
personal check(ten days check clear time). Please email WA4USO@aol.com if
interested.

Deadly suppositions
http://www.rationalreview.com/rlwrights/112603.shtml

/ / That's right. American troops are now being used to destroy private property of "suspected Iraqi guerrilla fighters." What happened to requiring proof before depriving someone of "life, liberty, or property" as stated in our own Constitution? Evidently that does not apply to people we attack so that we can bring them our way of life. \ \

--

GO F*CK YOURSELF, MR. PRESIDENT
http://www.antiwar.com/justin/j112603.html
/ / We must act, even if the threat is nonexistent - because of the potential danger. If "self-defense" consists of necessary "preemption," then what would happen if we started acting on this Bushian principle domestically? After all, killers, robbers, and rapists don't announce their intentions, politely putting us on notice before they strike. Why not just jail them before they have a chance to commit a crime? This principle, if applied within the U.S., would lead straight to totalitarian rule. Applied abroad, it means perpetual war. \ \

I Know When Bush Is Lying: His Lips Move
http://military.surfwax.com/files/Weapons_of_Mass_Destruction.html

/ / The Bush regime's panic is reflected in its adoption of Israeli revenge tactics, using F-16 aircraft to drop 500lb bombs on residential areas called "suspect zones".... ...Lianne Seymour, widow of the commando Ian Seymour, said: "They misled the guys going out there. You can't just do something wrong and hope you find a good reason for it later." \ \

War Propaganda
http://www.currentconcerns.ch/archive/2003/02/20030228.php

/ / In other words, the military actors and politicians are totally blinded by the "war on terrorism" dogma. Truth is falsehood and falsehood is truth. Realities are turned upside down. Acts of war are heralded as "humanitarian interventions" geared towards upholding democracy. Military occupation and the killing of civilians are presented as "peace-keeping operations."

The repeal of democracy is portrayed by General Franks as a means to providing "domestic security" and upholding civil liberties. \ \

--

http://www.bushdraft.com/

/ / With the threat of 56% of troops not re-enlisting Bush is going to need a draft unless he changes his policies soon. I'm sure you agree, I'm sure you don't want your friends, family and coworkers drafted either. To fight for what? freedom? When George Bush passed the Patriot Act and now the Patriot Act 2 he took away many of the rights that we cherish so much. Why are we "bringing freedom" to the Middle East when Bush has shredded the constitution and taken away our freedoms at home? It doesn't make any sense. \ \

--

http://www.globalblogs.com/binationaltimes/archives/00000116.html
"Yes, Bush lied"

/ / WASHINGTON - A year ago, on Oct. 1, one of the most important documents in U.S. history was published and couriered over to the White House. \ \

--

This is why I plead with armed Americans to kill the unarrested bush for the love of children everywhere. Look, we know directly who the bushites are who PUBLICLY advocate the murder of innocent People through corporate censorship, who support furthering the demon antiChrist's senseless crimes against my America, and our World. Example: You'd think Art Bell figures none of his listeners could in no other way, learn of traitor bush murdering thousands in New York City, and his contemptuous silence on the issue forbidding anyone else from publicly mentioning it. I have dominated alt.fan.art-bell for years, while Art Bell, like Canada's Peter Warren, will continuously advertise open line calls, but abruptly end calls topicing on KNOWN FACTS surrounding their evil false deity bush, 9/11, Iraq, depleted plutonium, Halliburton, and the deaths of our innocent lives fallen to their personal inaction depicting our community as uninterested. Art Bell in FACT has pre-screened his "open line" calls since bush stole power, and does so, to make appear Americans aren't clued in, on the now hundreds of thousands of innocent lives bush has murdered as war criminal. A good nazi bushite, is a dead nazi bushite, halted from advocating further war crimes constituting the murder of our innocent families. The dumfuk bushite parasites have been PURPOSEFULLY blowing themselves up with mined cluster bombs as suicide bombers! Not dying for any noble cause, but to only further toll more American Patriot lives. We should ask all soldiers, who are they loyal to, the 9/11 perpetrating American cop killer bush, or the People's America, as so enshrined by the Bill of Rights, and true Justice to actually protect the freedom of US people by following a leader?

These OUTNUMBERED and OUTGUNNED nazi bushites are indiscriminately bombing residential communities with radio-active toxic waste for nothing but to please their evil false deity, Our Mr bush Jr.. No rational reason but for a hatred to Your Humanity, and God if you believe.

Example: that evil nazi terrorist buford blount confesses to murdering thousands of innocent Iraqi People for nothing, no reason he proudly professes as wicked evil heinous traitor. Think of the lives You could save Patriot, by justly killing the unarrested buford blount, on hopes a person to take his place could at the very least consider being honorable in defending Your America? Demon buford blount is truly the enemy to American soldiers, for, if your family was murdered by buford blount irrationally commanding mindless bushite soldiers for nothing but to further rob the dying American tax payers, would you not too, spend your will hunting the evil nazi fuck down personally to spare further another innocent family suffering? To kill the unarrested unAmerican buforld blount is to stop him from ordering the practically dead already, nazi dumfuk treasonous bushite brethren teens, from victimizing again US as the innocent undefended.

While CNN still insists it's better for them to misinform and ignore, than to expose the demon bush as the true target for any Patriot's rage. American soldiers are being sacrificed to die for no known good reason, but for bad leadership as evil bushite war profiteers.

--
House Nixes Anti-Profiteering Penalties In IraqSpending Bill

http://www.senate.gov/~feinstein/03Releases/warprof103103.htm

/ / "When the Senate Appropriations Committee considered this supplemental request, Senators Leahy, Feinstein, and I joined together to criminalize war profiteering --

price gouging and fraud -- with the same law that was passed during World War II. Yet this amendment, was stripped out of the final bill," said Durbin. "I fail to understand how anyone can be opposed to prosecuting those who want to defraud and overcharge the United States government and the American taxpayers." \ \

--

--

/ / The Constitution cites "high crimes and misdemeanors" against the state as grounds for impeachment. Could there be any higher crime against the American people than to have knowingly deceived us in order to stampede us into an act of barbarism that has betrayed our finest ideals, our highest ethical standards, our national honor, and our whole history? \ \

> http://www.jail4bush.org/
>
> The money for reconstruction is being misplaced as stolen, while
> corporate america demands bush not be held accountable.

Here's what a bushite's granmom's tax payment is going towards, minus the 1.5 billion per month of 4 that is secretly STOLEN by the bushmob as something Americans are forbidden to know of through their corporate news censorship stealing their very own demeaned values,
dying.

How U.S. will spend $20.3B in Iraq
By SCRIPPS HOWARD

ACK! This Scripps Howard piece is missing from our internet world!

Hmmm.. now looking...
this following is an archive of official corporate news sources, of which few if none report specifically on how the demon bushmob is spending/stealing grandma's moola..

http://www.stern.nyu.edu/globalmacro/cur_policy/middle_east_news.html looking more...

U.S.'s 'Iron Hammer' Code Name 1st Used by Nazis
http://news.yahoo.com/news?tmpl=story2&cid=1896&u=/nm/20031118/us_nm/iraq_hammer_dc&printer=1

Not surprising, but not what Americans should be following after....

Anyway, the cash breakdown of the criminal thefts of Iraqi assets
is now, as the tyranny of the nazi bushites, becoming harder for US to
find, why so?

We have stories like these ones still though..

Senate digs into Iraq $87 billion
http://www.csmonitor.com/2003/0929/p01s01-usfp.htm

/ / 1. Four-week business course for 2,000 Iraqis, $20 million
($10,000 per pupil). \ \

--

The best evidence to kill bush quickly.

Demon bush "These terrorists target the innocent, and they kill by the thousands. And they would, if they gained the weapons they seek, kill by the millions and not be finished. The greatest threat of our age, is nuclear, chemical, or biological weapons in the hands of the terrorists, and the dictators that aid them. The evil is in plain sight, the danger only increases with denial."

Remember: Demon bush doesn't forget signing his soul to the invade Afghanistan plan by not following the 911 evidence, but would top secretly attribute to Laden for blame, authored by himself, rumsfeld, Condoleeza, and General Ahmad two days prior to the public event of murdering "thousands" in wealthy corporate America, a secret plan that has been confessed publicly to US as fully implemented by the White House right from the start to Jim at MSNBC, months after the fact when the demon antiChrist was caught with American blood in his breath.

Not to follow the criminal leads surrounding evil bush as mass murdering antiChrist, is what the White House confesses to Americans today as official policy under every circumstance. Karma. Demon bush tells corporate america that they'll persecute the innocent in any country by denying our fundamental human rights of Freedom and Justice, while now dropping 2000 pound bombs in God's World containing children, while corporate nazi bores, report in judgement of the great King who MAY have cuddled some cute boy! Jackson has given so much to America in stone, and in return, the corporate news nazi bushites sit condemning a great man whose open vulnerability gives him his wondrous strength and power as true American artistry. While these very same treasonous corporate bushite news anchors refuse to report on tommy franks running death squads against school girls, Guantanamo's Taliban's Girl School teacher Mozam Begg whose family served proudly for generations in the British Military, or tomorrow if YOU don't help US speak out publicly, continue refusing to report the general murder of civilian populations by the godless evil nazi bushite traitors. A good bushite, is a dead bushite halted for advancing their murder rampages against our innocent families irrationally. Demon buford blount, who runs like the nazi coward he truly is from my challenge to a death match, confesses to murdering thousands of US People for no military objective, but to get killed those that serve as bushwhored slaves under him to take his cowardly place instead, a die hard bushite nazi traitor. No government in Iraq would give WorldCom and Halliburton a blank check because they care too much for The People, nor certainly would they not, steal helpful Humanitarian Aid from poor people to pay the fraudster commi double billers, Halliburton again, nor either or, dump radio-active toxic waste on themselves to help bush's re-election campaign get off on murdering Americans for financial pain as God betrayers to US all. KILL BUSH NOW! Remember: a bushite soldier hides behind an American uniform, while knowing the bushmob has likely robbed their very own family of their savings and vital protection. Weak and cowardly, stupid and murdering innocent People for the demon antiChirst as their false deity parasite they are dying for TODAY as. I HATE bush as much as any real man would. The bush demon sells his Satanism by offering NO skills required to be dishonorable and dishonest, no reading newspapers, or feeling the pulse of the plundering nation required while ransacking the faithful. While these corporate news experts and CNN and CBC censor pleads from Humanity paying the wages of evil bush's wars against freedom and God, Justice and America, denied our corporate news coverage to be my primary lonely concern mostly it seems sometimes, as too, how terribly it truly is for life whose love isn't appreciated by our will anymore as the living in america, oh yeah, I mean America.

As an American then, what life will you forsake where bush'll rob you over and over as the never living for something better? These american bushite nazi fuks, think your gonna wash their feet, and instead of defending yourself and family, just turn the other cheek right before the bushites drop a two thousand pound bomb or two on your innocent neighbor next door? Done for nothing but feeding the bushmob?, as unarrested buford blount contends in God's presence? Then to think, buford blount figures I as a real man will not seek him out one to one to the ends of this universe for payback.

What can God do to help, if your refuse to help yourself? The true danger to America increases with American doubts on bush's blatant, true naked evilness, or humoring God as Johnny, and betting on yourself for a change by supporting me as the time being? Look, what could you do for your freedom, when I demand the pursuit of Justice by following evidence to truly protect this World we share? Support my demand to raise the news media's ignorance on what you shout even louder?

Think this: demon bush makes no public mention of where almost half of the monthly 4 billion dollar tax payer bill is quietly disappearing while grandma loses her cable television, or only grandson? Is that Leadership I ask every American Soldier to be brave and forward this letter on terrorism to your fellow comrads secretly. Then, we'll see...

Johnny Wizard

> American Patriot who fights gloriously for a just battle
> as the good guys would. Instead as the dishonorable

> bushites, robbing blindly themselves and their own dying brethren, while bombing our homes with radio-active toxic waste, that contains among other things, deadly plutonium. Enemies of God as the bushite disciples.
>
> Wow! Wouldn't it be cool if America stoop UP and destroyed the war criminals bush and rumsfeld by simple supernatural Human Will power?
>
> Tough luck so far for corporate news america continue to slog that America is so ungodly stupid as the uninformed, and have never heard of this Johnny Wizard artist taking center stage as makeshift creator antiChrist demon slayer.
>
> Of course we should not forget to mention again, in addition, like the same, Saddam offered the demon antiChrist, Our Mr. bush Jr. unfettered access to the Iraqi national media to preach his deceit against God and Humanity freely, but bush refused, so too just like CNN and CBC censors do today by refusing communicating community interaction on our top priority war issues. Instead, we must, they claim, continue sacrificing bushite soldiers to steal Humanitarian Aid, to then double pay commi Halliburton, or WorldCom; companies found repeatedly defrauding all Americans in criminal contempt for the dying American tax payers. All the while watching now in real horror, as bush OPENLY steals almost all of the National Iraqi assets for his private auctions, but for the exception of the already claimed, iraqi Halliburton oil reserves. Why?, Ho ho ho, because, he said so, in writing. 13303 states bush is the lawless demon from scriptural references, and why Christians don't stand in service for the cried mercy begged from God, the Son, and Humanity, I'll never understand, but Johnny'll tell You, he's gonna march home even if it means I'll do it all by my lonesome. My soul isn't for sale, nor are my righteous Universal principles stealable as a true Human defender to the last bushite standing who foolishly would choose to be my mortal enemy.
>
> To my friends in Iraq, don't let corporate american media divide yourselves from community as equal participators. An Iraqi, is foremost, a member of our Humanity, and just like the rest of US, hate the God betraying anti-American demon antiChrist bush, more than anything else in the Universe for persecuting the innocent while killing coppers to steal our assets undefended without a leader to speak out everywhere for our living rights included. HUNDREDS, if not thousands of American soldiers have already DIED in Iraq stupidly as evil nazi vermin, GAME OVER MAN, for nothing but

> their cowardly ignorance on our ability to communicate
> FREELY for Freedoms thought died for already. Dying for
> bush as too cowardly to protect themselves as their own
> friends, and sacrificing families they silently watch
> criminally plundered further by their leaderless
> inaction on truly protecting America. Again, bush isn't
> America, America is America.
>
> Justice for all, and let's name this time our own with

> knowledge is power. I am your creator that you have
> created! You! Right here! Words! Sitting at seven
> trillion years as the present and counting. This is
> just the tip of an iceberg, in a deep huge ocean, on a
> planet called earth that circles a sun. In the milky
> way galaxy containing billions, and billions of even
> more just like it, in a universe of universes that are
> bigger than forever. Of such immense girth, mass and
> energy, it can all be found alive and dancing in the
> period at the end of this sentence. Da Da! You don't
> really believe in all this now do you? How did you do
> it all like that really? You are now officially born a
> fool among the fools of creation. Thank yourselves. We
> win. Now I can get some much needed rest, by putting
> faith in you to help ourselves up. By waking up and
> smelling the coffee. If you now know for almost certain
> that our entire human civilization is being directly
> used to kill innocent people, including your neighbor,
> by a handful of the the most vilest excuses for hell
> barely living, scared stupid and shaking, shouldn't you
> have already something to say to your congressman, or
> getting the facts on CNN especially. How long must we
> tolerate this abuse by taking our crime. Or are you
> just a lily livered coward, who blames me for your
> excuses for killing yourself. Or making fun of others
> who are thinking, while lashing at who ever they tell
> you to because it's easier to play the role the nazi
> bank buildings and disorganized crime has you in for.
> It is safe to say, we, the people of all nations, are
> now officially the good guys and only one last step from
> calling ourselves the worlds saviors, by just counting
> ourselves in to help our politicians. Does this now

> mean we are better than those who would think that we were not? Things that make you go hmmm... As for the rest of ya, carry on as you were. Yawn. Then if by some unforeseen moment we find ourselves at an end, in a far distant future or tomorrow, alone without nothing, ourselves or any friends. Never ever being here or never ever even then. I'm sure it would be to a great big bang of laughter for being so foolish and not the wiser. Then maybe we would cry for nothing, laugh at our expense for listening, and start the whole thing all over. Only this time it would be funnier. I'm playing Jesus Christ for real! With the crafted success we have coming from our art departments, maybe all we have to do is make sure everyone knows their basic arithmetic and encourage politicians to sing or play instruments during recess. Just might work. This mythical journey of self discovery is based on the dreams and aspirations of others, where the only thing holding us back is ourselves. If there is one thing we can all be absolutely sure of, it is that the true spirit of mankind shall prevail. \ \

> / / After military action had begun, Defense Secretary Donald Rumsfeld claimed that Washington had exhausted every other means. "The American people can take comfort in knowing that their country has done everything humanly possible to avoid war and to secure Iraq's peaceful disarmament," \ \
>
> Fuk, what a traitor. Saddam wasn't found in breach of 1441, but bush and rumsfeld were, with their criminal unilateral war actions against the innocent. Knowing Annan would likely refuse to speak for the UN as officially represented. We had unrestricted access to go anywhere throughout Iraq without delay as the Justice League. But see? When contacting CNN and CBC, management included, why was it at the time, that THEY continue to this day refusing to inform our populaces, or broadcast any calls regarding the unbiased neutral facts impartially on behalf of everyone? They say nothing but continue to hope you'll suffer from your screams for Justice censored. We as the concerned and victimized, are routinely denied corporate media access, and portrayed as outsiders to the system highjacked. CBC, and CNN censors are the enemies of Freedom and Justice, for they as bushites, would refuse to air the FBI claims regarding demon bush's business partner funding the 911 mastermind, or that demon bush, and rotten rumsfeld with tommy franks, under the helmet of the 10th Mountain Division, were running death squads to harm children in Afghanistan for Heroin pushers, while murdering the American flag waving Freedom Fighters, the Taliban, who ran girl schools, and stood up for women's rights not to be bought or sold by the bushmob partners. The truth hurts the God betraying demon antiChrist.
>
> BILL THE ANTICHRIST OUR MR BUSH JR AND BE LOVED BY ALL
>
> How so that two or three parasitic bushite nazi war crime advocates, at corporate news control, can sacrifice our interests in fighting for freedom? How is it that they have determined We, as the World, must not be allowed to publicly discuss the demon bush declaration 13303, where the antiChrist states, he personally is above all the laws as our shared Universe of Universes? It's almost funny if bush wasn't actually dropping radioactive, heavy metal toxic cluster bombs on American Patriot troops to die by landmine later on.

> When, the Internet clearly demonstrates, especially

--

One More Thing

So, that demon bush, the American cop killer and his cohorts, are continuing to work destroying Humanity's gains in civility, by evilly dividing Our humanity with their blatantly open criminal intent to murder untold millions as US innocent, and as of yet, have not been executed by American Patriots for mass murder of God's Family in New York City. Traitors to US all on 9/11 without contention, for Our truth speaks as Ourselves, and witnessing just CNN's silence on General Ahmad, speaks volumes on their contempt for US as worthy of Justice. Refusing to do what is good for Humanity by offering the central facts as publicly recognized by Our Police Agencies to be actually documented. According to the FBI: the vacationing General Ahmad financed the alleged 9/11 mastermind, Atta, and also developed the criminal war strategy against Afghanistan with the bush administration, to boost the heroin trade, and save Enron to commit further frauds against American soldier families, while murdering over a hundred thousand American flag wavers, and then leaving US for further ruin with plans to continue on against 59 more countries in the same deceitful illegal manner against all Churches, as an evil nothing short of eternally crowning Our Mr. bush Jr., the super evil anti-Christ, the most hated and despised parasitic murderer in the entire annals of Humanity's History. Cool eh? Kill bush now! Why?

The bushmob have done nothing short of confessing to the entire terror event, but for jokes on our strained credulity to publicly press for further stalls. With the rights of kissinger left to be a public investigation official? (Gee, thanks for highlighting your partner like that for US bush, you nazi dumfuk.) Mr. bush Jr.'s america destroys themselves without Love for wisdom, or respect for intelligence as a Peace plan initiative. We publicly witness the blind and tormented dying bushmob slave whore charade, of contempt for living free in Our names. The two evil doers, bush and sadistic nazi rotten rumsfeld, are known publicly as documented, to continue leveraging the ignorance of the CNN ready to be broadcasted repeatedly, tranced dimwit marines, the true dumfuks of this world as weak and pathetic cowards to themselves as their own brothers they watch murdered for bush helplessly, communicated in CNN's un-American false image as the evil bush nation hiding in falsehoods as death squad recruiters against the practically defenseless as unarmed children, nazi vermin criminals, being unbiased as Blitzer about protecting your freedom Patriot, to lose your real life savings reader, truly too weak and stupid to stand up in protection for the flag as the living American Dream for anyone. Because witness again, CNN keeps not saying Justice is important as principle to hold our reflections.(CrossFire is getting better though.) Fortified behind locked doors in their bombed out bunkers, Blitzer and Hemmer sit rooted for the evil side to lose further to themselves by continuing to not respond to our communication know how. America, the People, rarely gain press time coverage as should be top priority always, while being paraded publicly as sold out as not deliberated, corporately represented as privately principled to stay ignorant of Justice to protect living personally, as actually worth something to the bottom line. Yours. Brought down Hell bound as cheated by corporate news america's valueless interest in the price of your living to continue on our behalves. What does CNN think of 2% Social Security? cheating a Soldier's Grandmother to pay tithes to the bush demon as criminal dictator?, american nazi death squads?, insider stock trades?, arming bush's heroin partners?, rotten rumsfeld and bush murdering devout corporate cultists like a would be, still silent Hemmer?, no opinion? Or the working for the People in our names OFFICIALLY, as the FBI and CIA officers actually involved in uncovering the evil bushmob deeds, like the warrant sabotage, Odigo, stolen passports of alive so called highjackers as once American trained as still Saudi pilots, or Anthrax made to look Muslimized, is not failure to connect the dots ever, or insufficient funding then is not less payment for our law enforcement now to nab the prime suspects. As Mueller, or mueller has not publicly commented of, but to say, he hasn't seen or heard anything of this police work, leaving the FBI unrepresented publicly as a threat by himself as a terrorist supporter, an devout member of the bushmob cartel. Why?, we must investigate Mueller if we should have him arrested for publicly obstructing the FBI asking the important questions. IT IS THE FBI, not pissant mueller, WHO CONCURES THE BUSHMOB'S AHMAD FUNDED ATTA. Or how about the dumb ass Ashcroft assault against every American to save his embarrassment of being completely unqualified and never elected?, no concern to mention on this either? Who suffers for CNN's refusal to demand Enron give back the billions that were criminally stolen from all American Families still sitting in the Cayman Islands? My God.

Somebody call the cops.. again!

I have personally spoken to hundreds, and written thousands regarding bush's guilt, and we can't seem to find any fault with what I am saying... How about You? Check out usenet group, "us.military.army" on the internet to see for US all, what questions if any are asked. Know also, CBC and CNN management staff will not contribute their disagreement as none present, but for continuing disregard for Your interests during Our news cast of the facts. THINK. I tell gun clubs, police officers, Biker gangs, and the general public to kill bush today for 9/11 and his death squads, against the helpless and undefended while arming heroin dealers and selling terrorist handbooks, with all the evidence one would need or asks for, and CNN with CBC corporate management does not, to my knowledge, call Our Police agencies to complain about my free speech capabilities, or will allow US public discussions with Our History as documented. Why? Those nazi bastards, Walter Issacson, Robert Habinovitch, and the two Coast to Coast godless vermin parasites know personally, they propagandize our communities with deceit to keep us divided as the plundered and murdered for the private banker buildings who sell weapons in bush's name to kill the innocent as ourselves unheard from. I can barely survive watching US ignore them as King to this World, my sweetie baby sugar dumpling, but, I think it's time to let Arron Brown in on a little secret... Johnny wants a word with his living responsibility to Americans on Patriotism. Instead of what we currently witness, a reluctance to not relentlessly pursue the truth to provide US the facts, (Look, it's true, Johnny has an ass.) but a censorship of control to falsely prop up the unelected nazi war mongering criminal, Our Mr. bush Jr., a terrorist of tyranny through criminal impropriety in violation with the American Constitution as a death bringer heroin dealer, at a seating that truly holds no vacancy, nor a Buddha, but a deception to plainly hide, the actual, got to be for real, super evil anti-Christ of all religion ever mentioned. Wow eh, even gentle jolly Buddha wants bush squashed! Seriously, please kill the bush demon to save US as victims friend. Justice must prevail as is truth eternal, that of what will be as God is.. just how many more as Humanity will be sacrificed in cowardice for the evil bush demon, before an American Patriot kills the mortal nazi dictator for treason as an American cop killer, and betrayer to all of our Humanities? Don't let tomorrow's news story be about Your murder as another, no longer heard from bush victim. For, my reason is as evidenced to actually be known, easily, while the CNN corporate cult product lies to themselves as Our public fact finders to leverage more ignorance than is found now.. as Our public voice to suffer by criminal dictates to destroy God as life giver. Fuk you america.

Heaven is on the Horizon.

We can teach ourselves as the uninformed by CNN standards to misinform and ignore. CNN's continuing silence on Ahmad, bush and rotten rumsfeld, only supports further our claim in their contempt for American Soldiers, and Our Families as not represented as worthy business investment. God, don't you just love me? Hemmer?

Mr. bush's publicized war strategy of no evidence requirement to hold American convictions for murdering Ourselves is evil all around everywhere, as understood without question to every honest Cop, the most serious of all criminal behaviors, of which, they carry guns for in just this sort of political development to halt reoccurrences. But bush, the anti-Christ, as america, says no for ALL Americans, they can no longer hold onto Justice as their own with him in their charging everyone as the enemy bush refraction. Just like, "bomb wherever" tommy franks would do with his own American family death squaded, like he did intentionally to our children, as his contempt for America will never stifle our voice with his silence regarding our aimed veracity to seek out and destroy the evil nazi bushmob fuks individually with God as Justice Supreme. The True American Way, for, the rare and few Marines, the one or two, are with US loyally to know so. See, there was a time when the Marines were taught diligently, so much so it was proudly ingrained as the moral fiber of their character, that an American Soldier's responsibility to America was to defend the Constitution as the Freedom to be America, with their lives if need be to protect their soul brothers as family, for the greater good by God, (just like the Taliban Rule Man) while today, Ashcroft, albeit muted, murmurs as rotten rumsfeld chuckles, Americans must instead as slaves give their lives unthinkingly as cowardly evil war criminals to protect the unelected bush mobster from criminal arrest for mass murders in New York City, and stealing that 50 billion, seeing that that stupid Justice thing in the American Constitution and Bill of Rights idea has now got to go instead of evil bush as demon traitor war monger, terrorist recruiting false god anti-Christ, but that aside... There is a guide book for leadership in the American Marines entitled, "Guidebook for MARINES", and inside, it contains 14 principles to strive for as an

American Soldier wanting to be a True Patriot as leader of Soldiers prepared to die for love of country, and our fellow man as friend or stranger, and here they are:

Integrity, Knowledge, Courage, decisiveness, Dependability, Initiative, Tact, Justice, Enthusiasm, Bearing, Endurance, Unselfishness, Loyalty, and Judgement.

For integrity it states:

"1. Integrity. The stakes of combat are too high to gamble leadership on a dishonest man. Would you accept a report from a patrol leader who had been known to lie? Of course you wouldn't. All your statements, official or unofficial, are concidered by your men to be plain, unadorned fact. Make sure they are. When you give your word, keep it. There are people depending on you to come through with the goods."

Now, I could go on further about what kind of lifeless degenerate a lawless cowardly mute soldier in bush's nazi death squads would have to be, to serve under bush as slave and traitor to home and family, as against God, the Flag, and all that we represent as equals through Justice, but I won't.

Mr. bush's america is uncontrollable by anyone. CNN figures if they never mention US, we'll never know who was invited as participators. (Example: CIA officers have had to PUBLICLY contact British News Services as the CIA, (Never done that I know of likewise before), regarding American interests in apprehending the TRUE 9/11 culprits ignored by american corporate dictates, and tenant also. One should remember, bush and rumsfeld would want to secretly murder any persons involved in 9/11 to clean up the huge crime scene, and tenant, is no brave and True Christ like figure as a living person, so what can we expect in all reality? Tenant will pay dearly if the evidence further indicates, as his continuing silence does label him already a willing traitor to all America, as too, his personal meeting with 9/11's Ahmad just prior seems suspicious also as not mentioned by himself in defense, along with his refusal to disclose the insider stock trades while leaving the fine CIA officers personally involved in the dark, as abandoned American Patriots, armed and ready to defend America as they should immediately for themselves, by executing bush and rumsfeld as terrorist cop killer, drug running freedom haters.)

America's false deity, the super evil anti-Christ, Our Mr. Bush Jr., doesn't think for me to be sacrificed without opinion by John, for I am free to act for my own beliefs as understanding, as I live in defense for living as all things created I am of honestly, simply amazing God is. However, I, as any truly living person would, can't help hate Our Mr. bush Jr. to death for what he and rotten rumsfeld is criminally doing, and further proposing against Our living in my name as unheard from dying without cause as murdered, but for bush's criminal contempt for my Awesomeness to beg once again friends, someone out there please, for the Love of Yourself and God, help US destroy Our Mr. bush Jr. quickly before he kills more as Ourselves unrepresented by corporate values in our commitments to freedom for living through Justice for all persons. Our Mr. bush Jr. has indiscriminately murdered more than 100,000 innocent souls with only a contemptuous smirk to his credit, while fully committed to more robbing and heroin dealing by blaming Laden for whatever without any evidence. Leaving Our true willingness silenced by corporate demands to propagandize and censor our truths, allowing bush, the dumfuk traitor, to continue demonizing America into a hell hole of ignorance through his hatred for life, Science and Nature. CNN's silence for America regarding the bushmob publicly stealing from their Own Family their freedom of Rights to be living, while committing Americans to a dictatorial crime ridden government, that bush and rumsfeld proclaim, is no longer applicable to the Law of any Land, is an abomination against Christ as living is Ourselves Being. America isn't America anymore, it's the bushmobbed universe of injustice and blind self hatred against all of Humanity, committed to leave none to survive but as slaves to be terrorized for the dummy bush demon as their false deity, a traitor in my midst, disguised to no one but himself as personally expendable. Again, where are the American Patriots we all hear so much about in the big screen to take down the seriously anti-American demon bush monster cop killer heroin pusher for treason, as all understood widely now factually with evidence and everything? Kill the war criminal evil doers, bush and rumsfeld today and be loved by yourself to be of Human Nature, or hunker to hell as a coward and betrayer to yourself and your own family, while watching the bushmob openly rob and murder further from our World, and on all of which we stand strong united. Justice for You.

This living plan of mine empowers others to learn their Rights as eternally established to be Kings and Queens on equal footing to be as all in all of gods forever dreaming, while demon bush intends the destruction of individual freedoms while robbing and murdering Americans from the inside, like sharon with US Jews does, as underrepresented, a condemning onslaught on Your better Judgement as reasoned on anything factual they figure blindly to be spinable, without your word contested. Your God Given Living Rights my friend. Without a rule of Law principled in the fashion of Justice for all to be sought as measured, bush's nazi amerika will continue to suffer ourselves needlessly for their corporatized self contempt in Our living Humanity as censored, without a thought for Justice, or the American Bill of Rights as God acting out eternally for prophets to wonder endlessly. See, I came up with this wacky Idea one day to make all my equal as self created to be so normally, in this Universe as we exist for Happiness ultimately as eternal, so, You or i will work this challenge to speak out for ourselves as Creation about bush's america, and it's responsibility as publicly advertised, to gather the facts on who suffers for bush's criminal misdeeds, and overall ignorance on everything. Mr. bush's irresponsible tax scam for example, is to put America's public money into the hands of private bankers, as the extremely rich already, while taking money away from those who spend the highest percentage of their paycheck on basic necessities as a gambled to be advertised, "stimulation package". HOW? The HOW is never explained with understanding as clearly regressive like the bush rule is, because.. Who spends MORE in taxes as investment at the grocery store to pay the cashier for his babysitter: 20,000 volunteer Janitors all named Rich, who ride the bus for convenience, or a mechanical billionaire private bank machine operator, who doesn't earn any nation's moola by working something for it?, and couldn't eat 20,000 cans of re-fried beans at one cruise lining to timbucks three without losing themselves, havening his tax manner over take in YOUR luxury. See, when America prints more money at the Treasury to give Greenspan to loan BACK to the Government illogically, the dollar value falls for everyone as investor, inflation, let alone the incurred bogus debt owed with real sweat as labor. Clearly, to every informed citizen not as democratic. Of course, National corporate news America, is genuinely not trying as capable by themselves to commit The living interest in Government as ourselves with oversight to manage US fiscally responsible, (like CNN regarding Justice and the Congress, or no Chomsky ever, E. Ann Clark as geneticist, or just research for experts as example), so, we do indeed, live in trying times due to ignorance as corporate america's disrespect for wisdom saught as yearning. It's like private bankers don't want the public to think about what we are doing as worthwhile knowing, eh? Or, I'm the only one on this planet who can almost read my own writing as the, one of a kind, good boy God freak. Anyway, the bushmobster scam leaves less finite wealth for all as taxable exchanges, while suggesting disposing of what dwindling national resource can be obtained, be given to create further debt by devolving into a military apparatus to make more enemies. Our Mr. bush Jr. is just plain stupid as destructive to everyone, but especially Americans to not stand up in defense of Ourselves. (Officially, rotten rumsfeld's criminal plan, "P2OG", is to encourage terrorist acts against Your Family, but you guessed it, not up to CNN's standard to report US as viable news material.) It's like saying fewer people educated, will keep us stupid enough as a Nation to blame the weak and poor as ourselves deprived till death as murdered, and, bush says makes sense secretly, as the all knowing for the blind and ignorant to faith in without thinking about what money is either. Our Governments should always be working to make the poor richer as a successful representation of our will as the public to improving our living condition, but the dumb and ignorant, talentless and monosyllabic, believe, someone else must be cheated and devalued, divided and murdered, in their universe for them to succeed without effort, or skill whatsoever.. Especially defense. Have you ever heard of the rock solid certainty of Universal "inverse variation" constants? (Canadian High School.) This is why in America, in a time where the nation was more literate as informed, Corporations were taxed at 85% and were happy about it for themselves as American citizens. It's understanding also, most as almost all of the most wealthy multi-nationals competing from military dictatorships against American minimums, run in continuous private bank debt, (your savings and pension as leveraged weaker being the entire Nations) but gross billions in profits. 99.9% of every private bank building in the Western World is mortgaged, not however in Iraq, or the Muslim World where interest is not charged on good standing loans made in Our names. (Sideline: Now recollect bush's puppet forcing Afghanistan to borrow from the World Bank for terrorist handbooks and heroin junkets, but not food, shelter or clothing, while spending in addition, 4-5 billion a month in godless bushfuked american Patriot Dollars, American Celeb Dollars, American TAX PAYER Dollars, to run deaths squads with tommy franks against teachers and children.) It's a strange idea to the dying to be corporately driven without thinking because, you wouldn't automatically think it could be more profitable to stay in cheaper as serviceable debt being a brick building, but it is by private banker swindle with National inflation succeeding personal interest rates. We lose personal wealth to the pirate banker fees without even privately using their/OUR National currency services, because truly, we can't go somewheres else.

As of course in america, an Enron can always be pulled, where it goes bankrupt as a toxic non-living entity, but leave richer as crooks than they did before calling an end to paybacks, with the People stuck to take the loss together for sure as the victims. While bush, says corporating America, his america, should learn for next time, maybe, while the CRIMINALLY STOLEN money is still siting in the Cayman Islands!!! See the Depression, a Canadian High Schooler, or watch bush act in direct opposition to his word almost consistently as American death harborer terrorist psychopath. Then ask yourself, why can none of our defenses be publicly discussed as important deliberations?

Love Justice by allowing others to read this paper, to judge the truth for themselves as worth something for all persons, and I will be truly grateful you cared to believe in a better future, for together, we could find a new hope for freedom, as happiness and prosperity for Yourself included. We only need believe in ourselves as unstoppablly stupid, and the Universe is ours as God is now testifier.

I am my word,
and make believe King to this world I call home,

Yours forever,

Johnny Wizard - Lord and Saviour

I really like the FT-8800R and am thinking about getting one but I would like to know something about the scanning first. I hate radios where you'll program a channel with frequencies and PL or DPL for Rx and then while scanning the radio'll pause on that channel even though the carrier doesn't have the same PL or DPL that I set for that channel. I know it may be a minor annoyance for some of you, but others like myself it's a PITA. :)
Does the FT800R act this way? Thanks.

Tony and the Group,

I have four Yaesu FT-8800s and they do NOT act this way. They simply scan past the frequency without pausing if it is not the correct PL or DPL.

Great! Thanks for the reply Jim. That about settles it then. Now hopefully I can find one in NJ today. If not, they say patience is a virtue. :) Thanks Jim.

Dang, things just can't be simple any more.

On the 605 Application Main Form, what Code do I use for Block 2 which is
the Application Purpose for my upcoming upgrade from Tech (Plus) to General?
Even the ARRL site doesn't mention what code to insert.

I'm not even 100% sure it's a 605 I use for a license class upgrade, it
looks like it is the right one to use though. The directions cover
everything but a simple upgrade of license class.

I think I have the rest of it figured out. Thanks & 73!

Jerry

You still have to go through the VEs to upgrade. So go to a VE exam
session. Pre-1987 Techs just have to file paperwork through the VE team.
The form will still need to be signed off by the VE team. The candidate
can't just file directly with the FCC. Post 1987 Tech+ will still have to
take the General written exam. In either case, the VE team will have the
proper forms and will fill out the appropriate upgrade information.

Thank you Dee, that confirms what I figured out just a few minutes ago.  I
use the NCVEC Quick-Form 605 Application which takes care of everything and
turn it into the VEC team the day of my test.  Thanks for the help. :)

Jerry

Amateur Radio Newsline™ Report 1372 – November 28, 2003

Amateur Radio Newsline report number 1372 with a release date of Friday, November 28, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Australia plans a celebration to welcome no-code, a New Zealand ham plans an Amateur Radio replacement for a frequency standard station and the U-S-A is on the verge of banning unsolicited junk e-mail. Find out the details on Amateur Radio Newsline report number 1372 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: WELCOMING NO CODE “DOWN-UNDER”

Last week Australia’s decided to abolish code exams on the 1st of January. Now its planning a world-wide on-the-air celebration as 2003 gives way to 2004 and Morse testing disappears. Jim Linton, VK3PC, has the story and an invitation for you to take part:

--

On New Year's Day 2004 Australian radio amateurs will gain access to the High Frequency bands using licenses that don't require the passing of Morse code telegraphy tests. The Wireless Institute of Australia invites the world's amateur radio fraternity to join an on-air celebration of this special occasion.

To celebrate the event, there will be a "WIA Welcome to HF QSO Party" beginning at 0001 Australian Eastern Daylight Time and conclude at 2400 UTC on New Year's Day - a total of 35 hours. The VK radio amateurs appearing on HF bands for the first time can be identified by three-letter VK callsign suffixes that begin with the letters H, T, U, X, Y and Z.

WIA amateur stations will be on air to join the HF QSO Party, and these have two-letter callsign suffixes "WI" or three letter suffixes starting with "WI." Listen for the call "CQ WIA Welcome to HF QSO Party".

For the Amateur Radio Newsline, I’m Jim Linton VK3PC.

--

Many in Amateur Radio have been campaigning for years to have code tests removed as a license requirement to operate on amateur bands below 30 MHz. For Australia this will happen on the 1st of January, 2004 with this very special on-the-air celebration.

(DO NOT READ. Find out more by e-mailing hfqsoparty@wiavic.org.au (Q-News))

**

INTERNATIONAL - NEW ZEALAND: A PROPOSAL TO REPLACE VNG

Still down-under, word that well known "Digital Modes" Amateur, Murray Greenman, ZL1BPU, has proposed that New Zealand and Australian hams put together a network of simple and inexpensive transmitters. This, to provide a high accuracy Standard Frequency Service to replace the VNG standards station that has now gone QRT. Amateur Radio Newslines Jim Meachen ZL2BHF is in Auckland with the details:

--

Amateurs in the South Pacific have for many years relied on VNG transmissions as a prime source of accurate frequency reference. With the closure of VNG in December 2002, the sole remaining precision signal source in our area is WWVH, in Hawaii. Unfortunately the WWVH signal quality in the South Pacific is generally too poor for reliable use, either to zero beat a simple calibrator, or using more sophisticated computer based techniques.

ZL1BPU says that a series of tests over the last two years has shown that simple low power carrier transmissions on the 80m band would fulfill most of the requirements of a Standard Frequency Service:

--

Greenman: “Using simple HF transmitters that I've designed, we have confirmed that low power transmissions are very useful, for both calibration and propagation study, up to at least 3000 km range.

Anyone can monitor these signals, using a stable receiver and freely available software to look for small frequency shifts that accompany each propagation path. Classic effects such as multiple paths with different refractive indices for different signal polarization’s are easily observable.

Doppler shift is particularly marked around sunrise and sunset. Observing these signals gives a better understanding of propagation, which is the key to accurate on-air frequency measurement.”

--

The Service now operates on a test basis with transmissions from a high precision local reference on an exact kHz point 80m frequency using a carrier power of 1-5W. The Transmissions are identified in Morse every 30 minutes. Operation is from a different geographical location each weekend. Transmission times are announced and coordinated beforehand by e-mail.

Reporting from Auckland New Zealand I'm Jim Meachen ZL2BHF for Newsline

--

ZL1BPU adds that these are privately owned, operated and attended test transmissions, not beacons. Establishing a Standard Frequency Service formally, perhaps under the auspices of the NZART, might be considered in the future. (NZART News)

**

COMMUNICATIONS LAW: HOUSE PASSES ANTI-SPAM LAW

Here in the U-S-A, Congress has moved closer to passing the first-ever federal protections against unwanted commercial e-mails. This, with the House passing a bill on Saturday, November 22nd that would impose new limits on sending direct advertising offers -- commonly called spam mail.

Approved on a 392 to 5 vote, the measure would prohibit senders of unsolicited commercial e-mail from disguising their identity by using a false return address or misleading subject line. It would also prohibit bulk mailers from harvesting addresses off websites and require such e-mails to include a mechanism so recipients can indicate they do not want future mass mailings. Penalties for failure to comply could be up to five years in prison in some circumstances.

The House bill largely mirrors ant-Spam legislation the Senate approved last month. Supporters hope that slight differences between the two measures can be resolved before Congress adjourns for the year. The Bush administration says that it supports the anti-spam efforts. (Published news reports)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Montgomery Amateur Radio Club repeater serving Rockville Maryland.

(5 sec pause here)

**

RADIO LAW: THE FCC ON PRIVACY OF INFORMATION

The FCC has put in place a temporary policy that will keep the public from knowing who is facing enforcement action by that agency. Amateur Radio Newsline's Bruce Tennant, K6PZW, picks up the story:

--

Don't look for names and call signs of alleged regulatory violators to be released by the FCC anymore. At least not for a while. This is because the agency has revised the format in which it's supplying the media and the public with information regarding alleged regulatory scofflaws, including those in the Amateur Radio service.

The revised temporary policy is based on privacy concerns within the FCC. Until further notice, the agency says that it will only provide the location where a violator lives along with a very brief synopsis of the action taken.

Following a policy review now taking place the FCC says it will announce a new privacy policy for all future information releases.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.

--

No timetable has been announced for the privacy policy review to be completed. (FCC)

**

ENFORCEMENT: NO MORE ADS AND WE RENEW YOUR LICENSE

And without mentioning any name or callsign, the FCC has acted in a pending non-certified radio equipment marketing case. This, as a Tomah, Wisconsin, licensee is informed that renewal of his Technician license would be granted on the condition that he permanently remove from the World-Wide-Web certain information.

The FCC says what it wants removed includes any advertisements for, or references to, the sale of transmitting equipment that operates, or is intended to operate, on frequencies in the Citizens Band service. Also references to gear for any other radio service requiring the use of certified transmitting equipment but which has not been certificated by the regulatory agency.

If he says O-K, he gets his ticket renewed. If he refuses to comply, the FCC says that his renewal will be designated for hearing before Administrative Law judge. (FCC)

**

ENFORCEMENT: PA REPEATER PROBLEM

The FCC has also warned a Lewistown, Pennsylvania, Extra class licensee that he must heed the request by a repeater owner to stay off that system and that technical problems with his own repeater must be corrected immediately.

And in an Order issued by Philadelphia FCC office that licensee was told that his repeater could not operate under automatic control until further notice. He was also requested to provide operational information about the repeater, including names and addresses of control operators. (FCC)

**

ENFORCEMENT: TOWER VANDAL FACES 27 MONTHS IN PRISON

And you can just about write the words “the end” to the case of a Washington man accused of tampering with more than 20 high voltage power towers in four western states that we have been reporting on. 62-year-old Michael Poulin has admitted the charges and has entered a plea bargain agreement with federal prosecutors. As a result, he will serve no more than 27 months in prison. He also faces a possible fine of $500,000.   Without the plea agreement he could have been sentenced to jail for up to 10 years. (CGC)

**

RADIO LAW FOLLOW-UP: THE NEVADA HIGHWAY PATROL VS THE FCC

Some enforcement news of a different kind by way of the Reno Gazzette Journal and the C-G-C Communicator. Both bring word that the Nevada Highway Patrol has turned over a 255 page investigative report and 2,500 pages of supporting documentation to that states Attorney General's office. The Attorney General will now consider the possibility of criminal charges will be determined in connection with the police agency’s use of a radio system on frequencies for which it holds no licenses.

As previously reported, the highway patrol launched the investigation earlier this year when it was discovered that it didn’t have the proper licenses to operate the $14 million communications system built for it in 2000. The FCC has threatened to fine Nevada and block the states future license requests if the Nevada Highway Patrol does not quickly abandon use of the unauthorized frequencies. (CGC)

**

WITH THE ARRL: 2004 ELECTION RESULTS

The ARRL has announced that Frank Fallon, N2FF, retained his seat as Director of the League's Hudson Division. This, by defeating Vice Director Steve Mendelsohn, W2ML, by a vote of 1933 to 1470.

Ballots were counted November 21 at ARRL Headquarters. The Hudson Division's was the sole contested seat in the current director-vice director election cycle.

Incumbents running in the Central, New England, Northwestern and Roanoke Divisions ran unopposed and were declared elected. Joyce Birmingham, KA2ANF, was the lone candidate for the vice director's seat that W2ML vacated to run for the division's top spot and was also declared as elected.

And don’t look for as many League elections to take place in the future as in years past. These candidates were elected to serve three-year terms of office that begin at noon on January 1, 2004. The change from two year to three year terms was instituted by the ARRL Board a few years ago. (ARRL)

**

REQUIRED READING: SURGE PROTECTION - SEPARATING MYTH FROM FACT

If you think that $2.98 bargain basement power strip will protect your ham gear from power line spikes, you could be in for a rude and very expensive awakening. This is the gist of a feature article in the December issue of Popular Communications Magazine titled Surge Protection: Separating Myth From Fact.

The author is Popcom Editor Harold Ort, N2RLL. In it, Ort takes you on a mind boggling journey into the world of powerline surge protectors. He tells you why power surges take place and what really works to protect your station -- and -- what does not.

The article is must reading for any ham that operates his station from mains power. You can find Popular Communications on many newsstands worldwide or subscribe over the web at www dot popular dash communications dot com. (ARNewsline(tm))

**

INDUSTRY NEWS: ROHN ANNOUNCES ASSET PURCHASE AGREEMENT

Amateur Radio and telecommunications industry tower manufacturer ROHN Industries has announced that it's entered into an asset purchase agreement. This with SPX Corporation which is described as a global, multi-industry company.

According to the ARRL Letter, ROHN filed for Chapter 11 debtor-in-possession relief in the US Bankruptcy Court for the Southern District of Indiana on September 16. The deal, if approved by the court would include ROHN subsidiaries that are party to the bankruptcy proceeding. (WA6KLA, ARRL)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

WITH ARNEWSLINE: YOUR INPUT NEEDED

Amateur Radio Newsline will be holding its annual Board of Directors meeting in early December and those in charge want to find out what you would like from us in 2004 and beyond. If you have any ideas on how to improve the newscast, the Young Ham of the Year Award, funding, or any aspect of our operation, we welcome your thoughts. E-mail is best. You reach us at newsline@arnewsline.org. (ARNewsline(tm))

**

HAM HELP: DX SOUND BITE NEEDED

Did you have a tape recorder running the weekend of the CQ World Wide SSB contest? If you did then Glen Lowery, K2FF needs to hear what you have.

The reason? Well, it seems that Daryl Goldman, KD5CQT, and Randy Becnel, W5UE , spent a week in Suriname in October. Goldman operated as PZ5CQ while Becnel was on as PZ5UE. The duo also activated PZ5A in the contest.

Anyhow, when the team got back home they realized that they had recorded everyone on tape except PZ5UE. And now there is a presentation planned for early December and audio of Becnel in QSO is needed to complete the show.

If you happened to be listening in and have the one missing station recorded, please contact Glen Lowery by e-mail to k2ff@aol.ccm Everyone involved will be very appreciative if one of you can help out.

More is on the web at www.mdxa.org/pz_2003.html (OPDX)

**

EMERGING TECHNOLOGY: CELL PHONES WILL POSSESS LOCATION-BASED BEHAVIOR

According to a report on the National Institute of Standards and Technology website, your cell phone may one day be able to adjust its behavior or call handling based upon where it determines you are located. Such phones could, for example, advise you of the closest bank, dial the nearest emergency specialist or automatically forward your calls while you're in a conference room. The N-I-S-T website carries many other interesting stories too. Its updated regularly and is in cyberspace at www.nist.gov (CGC)

**

HAM RADIO IN SPACE: ARISS GEAR PASSES PREFLIGHT TEST

Some exciting news on new ham radio hardware slated to be carried to the International Space Station. We have more in this report:

--

ARISS International Chairman Frank Bauer, KA3HDO, reports that he and other members of the USA team just returned from Russia where we they were supporting a series of meetings and tests at the Energia facility.

According to Bauer, the primary reason for the US team visit was to complete the testing of the Phase 1 Ericsson 2 meter and 70 cm radios, along with the Phase 2 Kenwood D 700 radio system using a set of flight identical ARISS antenna systems.

The tests were performed in the KIS facility at Energia that houses all their flight equipment. Inside the KIS is a flight equivalent Service Module. The good news is that the group not only successfully completed the end-to-end testing of the Kenwood and Ericsson radio systems but the SSTV system as well.

The successful completion of these end-to-end tests was a requirement by the Russian team. This, to clear these radio systems for use in the on-orbit Service Module.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

By the way, the International Space Station celebrated its fifth anniversary in Earth orbit on November 20th. (ARISS)

**

ON THE AIR: NEW SPANISH LANGUAGE IRLP REFLECTOR

A Spanish language reflector has come to the Internet Repeater Linking Project. This, with word that Reflector 9201 is in full operation and all users with Spanish skills are invited to join in the fun.

Jay Santiago, KP4EOP, is the operator of node 7040. He and the Chicago based Asociacion Iberoamericana de Radio Aficionados are the people behind the project. They say that 9201 is not closed to non-Spanish speakers. Rather it is a place in ham radio cyberspace where the Spanish language will be primary.

Up until now, IRLP- has been dominated English and French speaking nodes and reflectors. This left a large portion of the worlds Spanish only speakers out of communications over the very popular repeater linking system -- a problem that’s now been corrected thanks to the Asociacion Iberoamericana de Radio Aficionados. (K9DC)

**

PROPAGATION TECHNOLOGY: NEW SOLAR FLARE THEORY

The recent series of solar storms to hit Earth may be caused by the sun's iron-rich interior. So says one solar researcher who theorizes that the sun's core is made of iron rather than hydrogen.

Dr. Oliver Manuel is a professor of nuclear chemistry. He believes that iron, not hydrogen, is the sun's most abundant element. And, in a paper accepted for publication in the Journal of Fusion Energy, Manuel asserts that the standard solar model which assumes that the sun's core is made of hydrogen has led to misunderstandings of how such solar flares occur.

As ever ham knows, these flares can play havoc with high frequency communications while turning some VHF frequencies into world-wide D-X bands. (ANS and Space Daily)

**

DX

And speaking about DX, word that OK1TN will operate portable KP2 from St. Thomas in the Virgin Islands through the 13th of December. If you make contact, QSL as directed on the air.

Also, K3JT is active as 5X1X from Uganda for the five or six weeks. Sorry. No other information on this operation is available at this time.

Lastly, the Council of Europe Radio Amateur Club, has launched a competition open to all radio amateurs. This, to commemorate the 18th anniversary of its establishment in June 1986. The challenge involves sending a list of all contacts made with their club station TP2CE using its various special prefixes before the end of June 2004. Complete rules can be found on the Internet at ewwa.free.fr

(This weeks DX news provided by OPDX, GB2RS and Modern DX'er)

**

THAT FINAL ITEM: T-HUNT TIME AGAIN

And finally this week, whether you're young or old, you could become a champion at hidden transmitter hunting. It's time to start training now, as you'll hear in this report from Amateur Radio Newsline's Joe Moell K-Zero-Oh-V

--

USA's best on-foot hidden transmitter hunters will be heading west next summer. The fourth annual USA ARDF Championships will begin June 16 near Santa Barbara, California. Get ready for practice sessions followed by separate days of intense competition on the two meter and 80 meter bands. Medals will be awarded in nine age and gender categories, following the rules of the International Amateur Radio Union.

The competitive courses are open to anyone of any age, experienced or not. Here's your chance to learn from experts like Jay Thompson W6JAY, Newsline's Young ham of the year. He was a medal winner at this year's Championships in Ohio.

These USA Championships will take place just in time for final selection of Team USA members who will travel to the Czech Republic for the ARDF World Championships in September.

Event sponsor for 2004 is the Santa Barbara Amateur Radio club. General Chair is Marvin Johnston KE6HTS, a member of USA's first team to the World Championships back in 1998 and winner of medals at the last two USA Championships.

The official Web site of the 2004 Championships is now being prepared, announcing the location of event headquarters, rules and technical details.

Meanwhile, you can find out all about championship direction finding, and how your can have events in your home town, at the "Homing In" Web site, www.homingin.com

You'll learn the rules for this fast-growing sport, meet some of the current champions, get equipment suggestions and find out how to get on an e-mail list for the latest radio-orienteering news. That's homingin, one word, homingin.com

From southern California, where we have regular on-foot foxhunts and everyone is invited, this is Joe Moell K-Zero-Oscar-Victor for Amateur Radio Newsline.

--

Again, for more information take your web browser to www.homingin.com (K0OV, ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Jim Damron, N8TMW and I’m Jeff Clark, K8JAC, saying we hope you had a great Thanksgiving, 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2003. All rights reserved.

Hello. I've got a few questions about the FT-880R and its s/w (from RTSystems). Any help is appreciated.

I noticed that in the manul it states you can pick Encode, Decode, DCS, or Enc/Dec. The "Enc/Dec" is what I'm trying to program with the s/w but it doesn't appear, only Enc, Dec, or DCS. Am I missing something here?

Also, what is the "mask" feature in the s/w? Thanks.

Tony

Tony and the Group,

Actually you should be able to select:

-OFF
-ENC
-ENC.DEC
-DCS

I haven't used mask, but it might be a way to program in a memory and then hide it without deleting it.

Jim N�JS

Dear Judges, Lawyers, Policemen, Guards, Counselors, Taxpayers, et. al.,

We are here. Like it or not, for good or bad, we are here. Who are we? We are the
downtrodden and dispossesed, the self-torturing, the disenfranchised convicts,
drug and alcohol addicts, the unemployed and unemployable. We are the children of
poverty, financial and spiritual. We have and will have children of our own,
grandchildren too. We are ex-cons, uninsured, homeless, of many colors and speaking
many tongues. We are the enemy in what has become a domestic war against ourselves.

And who are you? You who like the tough talk of Tough on Crime? You who watch as
budgets are cut in education and health care while you militarize a police force?
Bullet-proof vests, automatic weapons, helicopters, tanks, robots ... the
testosterone is oozing through the streets, more prisons, longer sentences, tighten
the belt, spartan conditions, task forces, gang units, gun courts. And what is there
to show for it? Unemployent stays low because half the population oversees those
"out of the workforce", the dregs, the rabble, the enemy? Please tell me there is a

deeper reason. Do you feel safer? More humane? More like a cohesive society with a shared sense of purpose, who can identify Us and Them? Do you live in a gated community or gentrified neighborhood? By the way, have you read the Declaration of Independence and US Constitution - or do you only know the first phrases?

It's about time we got together. Please know that I have yet to meet a convict who wants their child to be a thief, an addict, a dealer, a prostitute, or a violent individual. Most of us still have hope for ourselves even when stuck in the darkest dilemmas, ruts and catch-22s. Most of us believe in crafting laws and instilling order. Many of us have burrowed beneath the surface to find a spiritual sense of being, an understanding force at least as powerful as those we succumbed to, and many of use wouldn't escape if you opened the front door. Did you know that approximately 10 million Americans are either incarcerated, on probation, on parole or once were in those categories? Each of those 10 million have families, friends, neighbors ... and so closer and closer does the We interface with the You. Don't you think it's time we talked?

Are you ready? Can you accept that the road we are travelling points toward a grim and painful future? Do you have the heart to face monumental failures while bravely struggling beyond where we are now? I know that some of you are, and that some of us are, and this is what gives me hope. You need our insights just as we need your structure. It is never over, especially when a real solution, a real treatment for our sickness, is yet to begin.

In Solidarity,

Bruce Reilly (a.k.a Bruha)
P.O.Box 8274

BRUHA@lixdevo.co.nz

P.S. - I am trying to conceptualize an effective guerilla media campaign to promote this cause. Ideas are welcome. Collaboration is prayed.

of these sites may be receiving Usenet with NNTP or by other methods. IBM VM/CMS sites which only have a connection to BitNet may still gain access to Usenet if they get a software package called NetNews, which is available from Penn State University at no charge. The PSU NetNews software allows sites to receive Usenet news over BITNET. Talk to your local site administraters to find out if your site has this software installed and how to access it from your account. Also, contact your favorite BITNET LISTSERV and get the list NETNWS-L. That list carries info on the necessary procedures and software.

Subject: What is a "flame"?

A "flame" usually refers to any message or article that contains strong criticism, usually irrational or highly emotional. Avoid "flames", and if you do get "flamed", relax, calm down and decide if it's really worth "co

I believe you're right about the masking feature. I only found one mention of it in the manual and it didn't explain it well. Regarding the PL/DPL settings, Yaesu's/RT's s/w that I just got only gives Off/Enc/Dec/DCS for options. I'm going to program it up and see what it does. Thanks Jim.

Tony

Posting this for a non-newsgroup amateur

Wanted: Interface cable from Yaesu FC-757 tuner to Yaesu FT-980 transceiver

If you have one of these cables and would like to sell it please contact
Paul - N0PL - at plinnel@nemontel.net

Thanks for the help

K7SAM

Julian Hirsch, 81, an Engineer Who Wrote About Audio Gear, Dies

By WOLFGANG SAXON

Published: December 3, 2003

Julian Hirsch, an electrical engineer and writer who was among the first to help a growing audience of audiophiles sort through the good, the bad and the indifferent in electronic sound equipment, died on Nov. 24 in the Bronx. He was 81 and lived in New Rochelle, N.Y.

....

It was his technical approach that at times drew disfavor from other experts, who asserted that he so admired each new line of speakers or amplifiers that he ignored the aesthetic quality of the sounds coming from them. It was, his critics said at the time, like judging a wine by chemical assays.

Julian Hirsch warmed to the technology at 14 with amateur radio. He graduated from Cooper Union in 1943 and spent World War II in the Army Signal Corps. He then worked in the electronics industry on laboratory instruments for spectrum analysis.

Having adopted hi-fi as a hobby in 1949, he and his engineering friends started testing products as the commercial audio industry caught on in the early 50's. They circulated a newsletter to spread the results, the Audio League Report, and eventually found 4,000 subscribers.

Reason for selling: Sight bad and cannot see enought to troubleshoot. ALL

ITEMS BEST OFFER!!

Have three Drake TR-4's, one working and two repairable. Were working until they went off-line Sep 03. Each unit complete, no cannibalization.

$100.00 each plus $22.00 shipping each.

Three AC-4 power supplies. One working and two repairable (blown diodes...had short in capacitor 330. Each unit complete.

$60.00 each plus $28.00 shipping.

MS-4

$60.00 plus $15.00 shipping.

Two Shure 444 mikes. $45.00 each shipped

W-4 Wattmeter. Good condition.
$50.00 Shipped.

Thanks

22 echoirlp nodes installed by ian g0hlj

hi all

so far ian g0hlj has installed 22 echoirlp nodes
they are all working fine

there has been no new irlp installs required due to a bad echoirlp install by ian

adding echolink adds over 2,000 nodes/repeaters to your irlp box
which are located in many other parts of the world not covered by irlp

the installation is easy and takes about 15 mins

if requested your irlp node can be backed up first

echoirlp can be uninstalled or disabled if required

it is important though that as always if you are not sure what you are doing please ask ian to change anything

echoirlp works great and i would hope to see every irlp node have echolink added

as always if you have any questions please feel free to ask them

we welcome any questions here and all questions will be answered and treated with respect

ian would be happy to inatall an echolink irlp node for you

please pass this information on

73 Ian G3ZHI

Hi Netters,

The DDS VFO based on the AD9850 is working fine. But I have a problem. I tested the setup with a 66 MHz crystal oscillator from Ecliptek.

But later I purchased a 100 MHz crystal oscillator and reprogrammed the PIC (making the changes for the crystal oscillator). This does not work. I used a test circuit and found that the oscillator is working fine. Please let me know the type of oscillator to be used.

Should I use one with TTL output or with HCMOS output ? What is the difference ? In case I need to buy a different oscillators what are the parameters to be aware of ?

Thanks in advance

Amateur Radio Newsline™ Report 1369 – November 7, 2003

Amateur Radio Newsline report number 1369 with a release date of Friday, November 7, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Rain brings the California wildfires under control but ham radio stays on the job. A report from the scene on Amateur Radio Newsline report number 1369 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: CALIFORNIA WILDFIRE COMMS WINDING DOWN

The Southern California wildfires are on their way to full control. This as the winter rains come early to the region. As a result, many hams who had been full time fire communications volunteers have gone back to their regular jobs and ham radio emergency communications efforts are winding down. Others are still on the front lines and now its time for assessment. Gordon West, W-B-6-N-O-A, spent most of last week at a Red Cross Shelter in the city of Fontana. He takes a look at the contributions made by the regions Amateur Radio communicators:

--

Audio report only. Hear it by downloading this weeks audio newscast file at http://www.arnewsline.org

--

Emergency service officials agree that having ham radio made a big difference in successfully handling this disaster situation. (ARNewsline(tm))

**

RESCUE RADIO: REPEATERS LOST IN SOCAL WILDFIRES

We all heard the grim statistics of the homes and businesses were destroyed by this years California wildfires over a million acres of land has been scorched. But there is one total that the mass media won't report. That's the number of ham radio repeaters knocked off the air by the blazes. While exact call signs are not yet available, we did ask reporter Matt Lechleiter, W6KGB, to find out which radio sites were most affected.

--

It's estimated that close to 30 repeater or remote base systems have been affected by the recent Southern California firestorm. These systems are either off-air, were before switching to backup power, or were destroyed by the fires. The number of systems actually destroyed by the fires is unknown - we'll follow up on this in a subsequent report.

Communications sites affected include Oat Mountain just north of Los Angeles, Sunset Ridge and Heaps Peak to the East, and Mount Otay near San Diego to name a few. Each of these major sites lost power due to one of the fires. News reports say that it could be over a month before power is restored to these locations. Until then, battery and generator power are keeping the commercial and amateurs two-way systems on the air.

There are also several repeaters that are believed to be safe but which are still off the air. This is because they live at more remote mountaintop sites that also lost electrical service to the flames. And just like the more accessible sites that I mentioned, it might be a quite a while before commercial power is returned.

For the Amateur Radio Newsline, I'm Matt Lechliter, W6KGB reporting.

--

If you are a Southern California repeater operator whose system was affected by the firestorms, or if you know of one that was, please send the details to us. We will include it in an upcoming report. Our address in cyberspace is nerwsline@arnewsline.org (ARNewsline(tm))

**

HAM RADIO IN SPACE: NEW GEAR FOR THE ISS

Radio gear from some well known ham radio manufacturers is in space. This, as the group known as Amateur Radio on the International Space Station announces the delivery of the so-called Phase 2 ham equipment to the ISS. Norm Seeley, KI7UP, has the details in this report:

--

A Russian Progress supply rocket has delivered a Kenwood TM-D700E, dual band transceiver to the International Space Station. The installation of this new radio will mean a significant boost to the power output of the ARISS station from 5 watts to 25 watts.

The Chairman of Amateur Radio on the International Space Station is Frank Bauer, KA3HDO. He says that the software for the D700 has been programmed for five modes of operation. These are for standard F-M phone, crossband repeater, APRS, packet and an emergency mode. Bauer predicted that APRS probably will be the default mode when a crew member is not actively using the ham station.

Next up will be gear from Vertex-Standard, the Yaesu brand folks. Bauer says that a Yaesu FT-100D, some SSTV equipment, along with new headsets, will be taken to the space outpost on Progress Flight 14P. Look for it to launch in January.

But says Bauer, that will be the endof the transport of any more ham radio gear for quite a while. At least until the space shuttle returns to flight in September 2004.

But that in itself could be a blessing in disguise. KA3HDO says that the equipment still on the ground will be tested this month at the Service Module facility in Moscow. This will permit making sure that the Phase 1 and 2 systems are compatible. RF testing will also take place.

According to Bauer, current plans call for the current Expedition 8 crew of Mike Foale, KB5UAC, and Alex Kaleri, U8MIR, to install the new hardware after ground tests are complete. Previous crews already installed four Amateur Radio antennas to cover HF, 2 meters, 70 cm and microwave frequencies.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

What about hams on the ground getting more chances to talk to the crew on the ISS?   Bauer says he's been working with U-S and Russian space officials to have them dedicate a few additional hours each month for operation and amateur station maintenance. (ANS, ARISS K7CCC)

**

HAM RADIO IN SPACE: SPAIN SCHOOL CONTACT A BIG SUCCESS

Still with news of ham radio on board the International Space Station, word that the Ourense, Spain school contact on October 23 was very successful. 75 children and 25 parents gathered at Ceip Seixalbo school as European Space Agency astronaut Pedro Duque answered sixteen questions in Spanish using the ARISS radio system. All nationwide radio, TV broadcasters, and newspapers were present. Duque has since returned to Earth along with the Expedition 7 crew.

(ANS, ARISS)

RADIO LAW: HAM ACCUSED OF AIRPORT SECURITY BEACH GETS CONGRESSIONAL SUPPORT

The ham who is accused of breaching airport security has gotten some unexpected congressional support. Amateur Radio Newsline's Mark Abramovich, NT3V, has the rest of the story:

--

Leading Democrats have openly criticized federal authorities for prosecuting Nathaniel Heatwole, W-Zed-3-A-R. Hes the ham who admits to planting banned items on airliners, allegedly to show flaws in airport security. And some in congress think he is almost a hero for pointing out the Transportation Security Authority's inability to properly protect airline travelers.

Minority Leader Nancy Pelosi is quoted in print as saying: " "I don't think he had criminal intent. I think what he was trying to do was to show how exposed we are and what our vulnerability was, and he tried to tell TSA and he gave a trail to them."

Pelosi said that if theres any penalty imposed, it should be some kind of community service. And Representative Ed Markey, a powerful Democrat from Massachusetts agrees. In fact, Markey says that any community service sentence imposed on Heatwole should be with the TSA.   And Markey adds that TSA officials should listen to him so that they know exactly how to prevent a terrorist from doing the very same thing.

And even the Republicans are getting into the act. Representative John Mica of Florida is chairman of the House aviation subcommittee. He said that prosecutors should concentrate on people who actually pose a threat, adding that Heatwole should not be the fall guy.

None of the politicians are not trying to excuse Heatwole's action, but they more and more are beginning to agree with Pelosi and Markey who apparently believes that the punishment should fit the crime.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Heatwole is headed back to court on November 10th for a preliminary hearing. What was not expected is the level of support of some in congress and the obvious pressure that puts on prosecutors working on the case. (From published news reports)

**

RADIO LAW: THE BPL WAR - THE ARRL VS. MANASSAS VA.

The ARRL has put officials in Manassas, Virginia, on notice that the League will act on behalf of its members. This, to ensure full compliance with FCC regulations when the city's Broadband over Power Line system starts up in a few months.

Manassas is a suburb of Washington, DC. The League said that it was responding to media reports that Manassas has approved plans for a citywide B-P-L rollout in the near future. As such, ARRL Executive Vice President David Sumner, K1ZZ, has faxed the Mayor of Manassas to point out the potential for RF interference from and to any Broadband over Power Line data distribution system. (ARRL)

**

ENFORCEMENT: FCC ISSUES 2ND LARGEST FINE IN HISTORY

Meantime, the FCC has proposed issuing the second largest fine ever for on a broadcast indecency issue. Amateur Radio Newsline’s Bruce Tennant, K6PZW, has the details:

--

The FCC wants to force Infinity Broadcasting to pay a fine of $357,000. This, for airing a shock jock radio segment in which a couple was said to been involved in the most intimate of human experiences in New York City’s famed St. Patrick's Cathedral.

According to news reports, the FCC proposed record forfeiture is in response to complaints from the public following an August 2002 broadcast of the "Opie and Anthony" show and aired over thirteen Infinity owned radio stations. The nationally syndicated show was canceled a week later and hosts were fired.

Four commissioners voted for the fine. The fifth said the agency should have taken even stronger action. He said that the FCC should have gone after Infinity's radio licenses and taken their stations off the air.

Infinity has 30 days to pay the fine or appeal. The company has indicated that it will use the legal recourse.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

If upheld the amount paid would be second only to the $1.7 million dollars Infinity paid in 1995 to settle several cases against shock-jock Howard Stern. (FCC)

**

ENFORCEMENT: USERS RESPONSIBLE FOR REPEATER INTERFERENCE

Users and not the operator of a repeater are responsible for interference problems to another New Jersey repeater system. This is the gist of a September 12th letter to Andrew Woerner, K2ETN, who operates a repeater bearing his callsign.

Back on July 7th the agency notified Woerner that it had received complaints that his repeater, operating on the 146.355/146.955 MHz channel pair, was causing interference to the coordinated W2RAP repeater on the same frequencies. The complaints alleged that Woerner's repeater was previously coordinated but that it has relocated since the coordination was issued.

The FCC requested that Woerner provide information in response to the complaints. He did, and in a follow-up letter, the FCC said that it has reviewed his information as well as detailed reports provided by the Metropolitan Coordination Association and the Area Repeater Coordination Council.

The FCC says that coordination does not appear to be an issue in this case. Rather, the interference problem seems to result from users of the K2ETN repeater, which is located in Northern New Jersey, attempting to access that repeater from locations in Southern N/ew Jersey. As such its repeater users who are interfering with the W2RAP repeater and not the person running the K2ETN machine.

The bottom line. The regulatory agency says that this situation does not appear to warrant its intervention. Instead its calling on everybody to work together to minimize any interference to the W2RAP machine. (FCC)

**

ENFORCEMENT: FCC PROPOSES $120,500 FOR ANTENNA STRUCTURE VIOLATIONS

Meantime, its the fine of all fines for radio tower violations. This, as the Federal Communications Commission releases a Notice of Apparent Liability on October 31st. One proposing a $120,500 forfeiture against SpectraSite Communications, Inc., of Cary, North Carolina for safety-related violations of the Communications Act and the Commission's antenna structure rules.

Specifically, the FCC is going after SpectraSite for its failure to register and light its antenna structures following an investigation conducted by the Commission's Norfolk, Virginia Field Office.

The FCC says that the amount of the proposed fine represents the statutory maximum available. The Commission says that it decided to propose a significantly higher forfeiture than generally used in such cases because SpectraSite has a prior history of antenna structure rules violations. It says that SpectraSite has received three previous forfeitures in less than three years for at least 13 instances of failure to comply with the antenna structure rules.   (FCC)

**

RADO LAW: EMDERGENCY OFFICIALS CONCERNED ABOUT PUBLIC ACCESS TO "MIRT"

Emergency responders are concerned that MIRT, or mobile infra red transmitters are falling into the wrong hands. Mainly, into the hands of people not willing to obey traffic laws.

A mobile infra red transmitter allows personnel aboard emergency vehicles responding to emergency calls to quickly change specially-equipped traffic signals in their favor. That was fine until Internet websites began offering the same devices for use by the public for around $300 a pop.

Unlike radar jammers and certain laser detectors that emit radio signals, the mobile infra red transmitter and other signal changers send out a beam of invisible light. Since light is not controlled by the FCC the devices do not run afoul of the agency’s rules.

Needless to say that this is causing concern for those who rely on the technology for legitimate needs. Don’t be to surprised if states begin enacting their own laws to control the sale and purchase of the units.

More on the situation and the device is in cybrspace at
www.detnews.com/2003/commuting/0310/26/a01-307303.htm and
  http://www.themirt.com (CGC, others)

**

COMMUNICATIONS CRIMES: INDUSTRY VS. IDENTITY THEFT

Microsoft and other technology giants have launched an industry alliance to thwart identity theft and boost confidence in e-commerce. The Coalition on Online Identity Theft will campaign to improve e-commerce record-keeping, beef up Internet security and enforce penalties against identity thieves. The formation of this group comes in response to growing concern over the growing tine of identity theft crimes and government pressure on industry to help to thwart it. (Published news reports)

T-HUNTING NEWS: THE BIRDS OF FALL

If you are into hidden transmitter hunting, listen up. This one is for you. Keeping track of over 300 migrating radio tagged birds.   Joe Moell, K0OV, is here with the details.

--

Since 1998, you've heard me reporting on hams and scanner fans tracking Burrowing Owls that migrate from Canada to southern states and Mexico. Researchers are so impressed by the capabilities of hams to do this sort of thing that they are asking for help with other critters. Right now, we're starting our biggest ever project, with more birds and more states involved. Nick Myatt of the Arkansas Cooperative Fish and Wildlife Research unit has radio-tagged 360 American Woodcock in Minnesota, Wisconsin, and Michigan, and he wants hams to help him find out where they're going. They're heading out now, and the list of possible stopover and destination states is big, including Southern Minnesota, Southern Wisconsin, Southern Michigan, Iowa, Illinois, Indiana, Kentucky, Missouri, Eastern Kansas, Eastern Oklahoma, Arkansas, Tennessee, Mississippi, Alabama, Louisiana, and Eastern Texas. If that's where you live or travel, please check my Web site for the list of active frequencies, all between 150 and 152 MHz.

Also at this time, Dave Sherman, a Biologist with the Ohio Division of Wildlife, is looking for help in keeping track of two radio-tagged Sandhill Cranes that should be leaving Ohio about the time you hear this. More information, including the frequencies, is on the Web. Go to www.homingin.com

Besides the frequencies, you'll learn how to identify the special characteristics of a radio tag signal, and you can subscribe to an e-mail list for fastest notification of these studies. That's homingin -- one word -- homingin.com

From southern California, this is Joe Moell K-zero-Oscar-Victor, for Amateur Radio Newsline.

--

Again, more information is at Joe’s website. Its in cyberspace at www.homingin.com. And remember: homingin is one word. (K0OV, ARNewsline(tm))

**

NAMES IN THE NEWS: QCWA SEEKS NEW G.M.

In other news, word that Jim Walsh, W7VLN is resigning as the General Manager of the Quarter Century Wireless Association and the groups Board of Directors is looking for a replacement.   Among the responsibilities are attending all meetings of the QCWA board, keeping full records for the organization and conducting the general correspondence. A solicitation for nominees is on line. You will find it in cyberspace at www.qcwa.org/manager.htm (QCWA)

**

CONFERENCES: 30TH ANNUAL EASTERN VHF/UHF CONFERENCE

The 30th Annual Eastern VHF/UHF conference will be held next April 16th to the 18th, at the Radisson Hotel in Enfield, Connecticut. Planners say that the conference has been moved to the spring time to help alleviate numerous conflicts with other ham radio activities and vacation schedules in August. Guest speakers, proceedings, articles and overall volunteers are being solicited to help out. Prize donations are also being solicited from vendors and members. More information is available from conference chairman Bruce Wood, N2LIV, by e-mail to bdwood@erols.com (VHF Reflector)

**

BEACON NEWS: C6AFP COMING BACK ON THE AIR

Steve Rutledge, N4JQQ says over the VHF Reflector that the C6AFP beacon in grid square FL16, should be operational soon. This, thanks to W4WSR who rebuilt the old one that WZ8D originally supplied.

That one took a lightning hit last summer. Rutledge says that he was able to salvage the RF board but that was it.

Rutledge thanks C6AGN, whose Q-T-H the beacon now lives at. This is in Coco Bay, Green Turtle Cay, Abaco, The Bahamas. He says that Bill should be back on the island on or about the time this newscast hits air. Hopefully we will hear the beacon sometime later this month. (VHF Reflector)

**

INTERNATIONAL - INTRUDER WATCH: PIRATES OF THE PACIFIC

On the intruder watch scene, VK6XW in Albany Australia reports over 130 of them in the ham bands in recent days. The majority are foundd on 20 meters and appear to be Indonesians, with the rest being Asian Intruders including a number of fishing boats. VK6XW says that the boats also use Amateur Radio VHF frequencies for ship-to ship communication.

Meantime, Chris Wright, VK2UW in Lighthouse Beach New South Wales Australia reports on other pirates in the Pacific. This group is using Amateur Radio calls such as VK4ZLY, several Zed L calls and American calls -- portable VK. These are also on 20 meters and Chris says that they have become a major headache to a number of regularly schedule ham radio nets.   (Q-News)

**

DX

In D-X, word that XV9DT is active as 3W22S now until the 31st of December. The special callsign is to celebrate the 22nd South East Asian Games, hosted by Vietnam. (GB2RS)

Also, HB0/HA0HW/P and two other stations will be operating from a location 1350 meters above sea level in Liechtenstein through the 10th of November. The three operators will be active on 160 to 10 meters, with an emphasis on the low bands. Modes used will be CW, SSB and RTTY. QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: NYC HAMS RUN THE RACE

Kenya again ruled the New York City Marathon but it was ham radio that kept the race running. Amateur Radio Newsline's Henry Feinberg, K2SSQ, takes a look at the November 2nd event and the radio amateurs who kept it moving along:

--

Steve Mendelsohn, W2ML: "When people say 'why do you do it' my answer is always the same. I'm in it for the T-shirts."

--

And after 27 years as Communications Director for the New York City Marathon, Steve Mendelsohn W2ML, has to have quite a collection. But Mendelsohn is also the first to tell you that he is only a small part of a big ham radio organization that keeps all the races within the New York City Marathon moving. And 2003 was no exception:

--

Mendelsohn: "At about 8 o'clock we went to the actual starting line at the Verrazno Narrows Bridge and Alan fired the air-horn that's starts the race for the athletes with disabilities. And, 15 minutes after that it was the start of the wheel-chair race; and 15 minutes after that was the start of the hand-cranked race and fifteen minutes after that the elite women. And finally, at 10:07 our operators climbed into vehicles -- because we maintain control of all of the vehicles on the course for safety purposes -- and we use Amateur Radio to do it -- and down the course we went.

At the other end, we climbed out of the vehicles; everyone went to do their next assignment and from the time that the male winner cross the finish line at roughly 12:15 p.m. until the time that we closed down the Family Reunion at 6:30 at night and started to tear down, 411 hams worked with the other 12,000 volunteers to make this the smoothest, best marathon ever."

--

The Alan that Steve referred to is Race Director Alan Steinfeld, W-2-T-N. They were but two of the 400 plus Amateur Radio volunteers who came out this year. And Mendelsohn says that the hams were kept very busy, especially in assisting in medical communications as runners fell by the wayside:

--

Mendelsohn: "We had people went down virtually everywhere on the course. The hams were there with the doctors to help and provided a great deal of medical communications back to the Family Reunion area. This allowed the families to know that a runner had dropped out: That they may have been taken to a hospital or that they were simply going home.”

--

Mendelsohn says that between 800 to 900 pieces of health and welfare traffic was passed between 10:07 a.m. and 4:40 p.m. He also says that 2003 was the years of APRS at the New York City Marathon. Ill have that part of the story next week.

With part of the course of the New York City Marathon in sight, I’m Henry Feinberg, K2SSQ, reporting for the Amateur Radio Newsline.

--

As for the race results. Kenya’s Martin Lel, running his first ever marathon won the Mens division. He timed in 2:10:30 beating out defending champion Rodgers Rop. Meantime Margaret Okayo smashed the course record. She won the race for the second time after crossing the line in 2 hours, 22 minutes, 31 seconds, shattering her own record by almost two minutes.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Jim Damron, N6TMW, and I’m Jeff Clark, K8JAC, saying 73 and we thank you for listening. Amateur Radio Newsline(tm) is Copyright 2003. All rights reserved.

```
rec.radio.amateur:5956 rec.radio.amateur.dx:614 rec.radio.amateur.misc:1695
rec.radio.shortwave:4274
```

A weak shockwave from the glancing blow of the coronal mass ejection from the X28-class flare of 4-XI-2003 was recorded at about 1900Z 6-XI-2003. It only produced minor to major storm conditions that passed after a few hours.

As I write this update, the geomagnetic activity is slightly active due to the influence of a small coronoal hole. The IMF (Interplanetary Magnetic Field) has been somewhat orientated toward the south (with a Bz reading that is negative), so this has elevated the geomagnetic activity. This geomagnetic activity will continue for a few days. It will mostly degrade over-the-pole and very high-latitude propagation paths, and slightly degrade the lower HF frequencies.

The proton event that we've been having is pretty much over, though, so the polar paths are better than they've been for many days, even with the elevated goemagnetic activity.

Here's an interesting note: on 6-XI-2003, two B-class flares were recorded. These unusually long flares are indirect echoes caused by giant flares still occurring from those two huge sunspots, but from the other side of the sun! This is an indication that we'll want to watch for the return of these sunspot groups and their possible continuation of high intensity flaring, when they rotate back into view in about 10 days.

Propagation this weekend should be fair to good for most paths, on low HF all the way up to about 21 MHz. Frequencies above 21 MHz will have weaker propagation on many paths, as the 10.7-cm flux has decreased again to below 100. Predicted average flux is 90 and 86 for today and tomorrow.

Heh - close! Not too much in the way of solar activity, right now. Just some solar wind enhancement from a small coronol hole, and the related geomagnetic activity. With a moderate solar flux, we're back to the "average" DX that is typical of the declining phase of this solar cycle.

Date: Sun, 09 Nov 2003 03:23:31 GMT
Xref: archiver1.google.com alt.ham-radio.hf:3698 alt.ham-radio.vhf-uhf:20447 rec.radio.amateur:5958 rec.radio.amateur.dx:630 rec.radio.amateur.misc:1724 rec.radio.shortwave:4341

The solar activity that took us by surprise during the end of October and beginning of November 2003 has me revising my outlook for the CQ WW CW contest period of November 29 and 30. I am now expecting conditions to be a bit rougher than I forecast in my column. Using the 27-day solar cycle as a guide, we are looking at Low to High Normal conditions. Low- and mid-latitude paths will be good, while high-latitude and polar paths will be poor to fair. There is a slight to moderate chance that the major sunspots will return with enough flare activity to cause daytime radio blackouts during the weekend.

The predictions right now call for a maximum Kp index of 3 for both days, and an estimated Ap index of 15. The low geomagnetic activity forecast is very conservative, though, since I still expect the sunspots to hold enough punch to create coronal mass ejections that will elevate the geomagnetic activity. As you know, the more active the geomagnetic field, the more likely the ionosphere will recombine, lowering the MUF. The 10.7-cm flux is expected to be between 160 and 170, since the sunspots will have returned.

Therefore, I expect that the higher bands will be poor to good, depending on the path: Trans-equitorial paths (N/S) will be the best, while polar paths will be the worst. The middle HF bands will be fair to good. If flaring occurs with enough intensity, the nighttime low

HF bands will be degraded, too.

Those operating in low-latitudes will fair the best, to
be sure. But, that is typical, during any condition.
Those who will be at high-latitudes will certainly have
a challenge. But, that is what CW is all about, right?
I'll keep a watch on things, and post an update as we
get closer to the contest weekend.

I have one of Kenwood's KVT-10 SSTV units (the land-mobile version of
the VC-H1) and I'm trying to find SSTV software that can receive the
various modes sent by this unit. It offers Robot 36 (easy enough),
but also has two additional (apparently proprietary) color modes and
two black-and-white modes, in addition to Kenwood's "Fast FM".

I can *almost* receive a clear picture using the Color 1 mode if I use
"MR73" mode on MMSTV and manually start the receive session. The
frame size is right and a color image is received (you can see the
picture), but the image is still messed up with horizontal lines and
other problems.

Does anyone know of a way to receive these other modes from the KVT-10
(short of using another KVT-10 unit)? Would it help if I posted (on
the web, not here) the images that I've been able to receive so far
(i.e., when using MR73 mode)?

Thanks for any help!

73,

Robert
KC8UCH

Geomagnetic activity is increasing, now, due to the influence of fast wind coming from the coronal hole located in the central meridian of the Sun. The rest of today's geomagnetic activity will be unsettled to active (up to a Kp of 5). This will degrade the higher HF bands for the next two days. By 11-XI-2003, a large coronal hole which is rotating into geoeffective position will inhance the solar wind further, causing active to minor geomagnetic storm conditions.

Three new sunpots have appeared on the Sun (Catania numbers 86, 87, and 89). These are now growing and have what is known as a "beta magnetic configuration." The may become a source of flares, at least C-class at this time, causing some minor radio degradation on the lower HF bands on the sunlit side of the earth.

The 10.7-cm flux is now expected to rise, again, with these new sunspots. Expected flux levels are 93, 95, and 98 for today through Tuesday. But, with the increased geomagnetic activity, the higher bands will still suffer.

The large coronal hole that was predicted to move into geoeffective position by 11-XI-2003 has indeed, affecting the solar wind. The solar wind has been elevated since 10-XI-2003, with a consistantly southward orientation (Bz is negative) in the interplanetary magnetic field (IMF). The solar wind stream is expected to continue at this higher speed for the next few days, with a high possibility that the IMF will remain orientated southward. This will cause the geomagnetic field to remain at least active, but most likely at minor to major storm levels (at least a G2-level geomagnetic storm, Kp levels between 4 and 7).

The Ap is expected to continue to rise, up to a possible 70, during the next few days. But, the 10.7-cm flux is also rising a bit, with 95, 98, and 100 expected from today, 11-XI-2003, through 13-XI-2003.

There have been a series of B-class flares from the new sunspots (498, 499, 500). This has caused very minor degradation of the middle HF bands in geographical areas directly facing the sun. Type-II radio emissions have been recorded, as well, indicating minor coronal hole mass ejections (CME), further enhancing the solar wind stream.

As I write this, the first M-class flare peaked at 1351Z 11-XI-2003, at about M1. It is unclear to me yet where this flare came from. It might have been from region 500, or, highly possible, from the now-returning sunspot region 484 (we saw activity from this one several weeks ago). The possible return of large active regions that contributed to the high activity of the last 3 weeks is expected between 11-XI-2003 and 16-XI-2003, starting a new surge of flaring activity for several weeks. In the meantime, the very large coronal hole should be the main source of Earth disturbances.

Overall conditions, then, on HF will be poor to fair. The high geomagnetic activity for a period of many days will degrade or even shut down polar and high-latitude paths, while leaving mid- and low-latitude propagation paths only marginal. There will be exceptions to this across paths of sunlight, due to the higher flux levels. VHF conditions could be enhanced due to the active aurora conditions and elevated geomagnetic activity.

LIMARC (the Long Island Mobile Amateur Radio Club) has had two Field Day meetings in preparation for the big event next June. We want to improve our emergency preparedness and we feel that it's to the club's and public's advantage to get an early start. We want to be ready far in advance of this event.

LIMARC feels strongly about being ready to assist in any type of emergency situation. We would like to be ready to do our part for public service.

At this time LIMARC is looking for donations of towers, telescoping masts, beams or vertical antennas, radios, etc. to be used for the Field Day event, or any other emergency where we may need to provide emergency communications.

If you have any of the above items, and are not using them, and would be intersted in donating to our cause, please contact Jeff, N2ION@AOL.COM or by phone at 516-356-0800.

The club will provide you with a donation confirmation document letter for tax purposes.

We really need your help at this time so please try to assist us as best you can.

Thanks & 73,

Jeff, N2ION
Co-Chairman-LIMARC Field Day Committee

After many years as KA0GOF, DA1TY, and KB7EAT, I allowed my novice ticket to expire. Many, many hours were spent making CW QRP QSO's in that time. Life got busy, kids were growing, and had little time for this beloved hobby. Ticket expired 11/07/99. A friend suggested he thought there was a more liberal grace period for novices but only thing I find on-line is 2 years. Can anyone enlighten me? Do I need to retest? Had code speed to 20+ wpm at one time but would have to re-learn theory and all.

Many thanks.

The two year grace period is the only one I am aware of.

Yes, you need to retest. The current "Now You're Talking" is the ARRL
book that covers the material and preps you for the test. Many clubs
offer classes, including a "license in a weekend" version.

The initial license now is Technician, 35 questions covering what used
to be on the Novice and Technician exams. No code required, although
if you pass a 5 wpm test, you can add some HF privileges.

Beyond that, you need 5 wpm code plus a second written test for
General, and then a third written test for Extra.

Happy trails,
Gary (net.yogi.bear)

I'm selling my trusty Scout:

<http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3057949710>

Ten-Tec Scout with 40 & 20 meter modules, Bencher Iambic Paddle included. Unit has noise blanker/Jones filter built in and user manual/schematic is included. Radio has "Amp" jack for power but PowerPole adapter is included for emergency service interoperability. No microphone was ever used on this rig.

Per FCC rule 97.507(5), your Novice license (even if expired) gets you credit for Element 1 (the code test).

In a similar situation, one club I belonged to, advertised a massive swap
meet at a local college. The club took 10% of sales and was able to buy the
equipment needed.

Just a thought

>

You are outside the grace period for renewal and the license system is now different than when you tested before. You will have to retake a written test. There are only three license classes: Technician, General and Extra. The Tech is a no code license and grants VHF and higher frequencies only but you do get all modes and full legal limit power in the VHF and up range. You only need 5wpm to get the Tech HF privileges, which are the same as the old Novice HF privileges. If you can prove you ever held a Novice ticket (old license, old callbook, verification from FCC), you do not have to re-take the code test. Today, the only code you have to pass for ANY license class is 5wpm.

So here is what you can do:

1) Present proof of previous Novice license and take current Tech test - You will have the Tech license with (limited) HF privileges. Keep that proof of your old Novice license though to prove you do have these privileges as the FCC database will not show your HF qualifications and you may have to prove it.

I would recommend then studying for your General. You can either take it at the same time as your Tech test or take it later. By taking these two written tests and showing your proof of your previous Novice license, then you will be granted a General class ticket.

If you want more frequencies, you can then take the written for Extra.

Once you pass your tests, you will receive a new 2x3 call if you receive a Tech or General license. Extras can receive a 2x2 call beginning with AA through AL. There are no other 2x2 and no 1x3, 1x2, or 2x1 calls available for sequential issue. Some of them are, however, available via the vanity call system.

So get back in and join the fun.

Go back to your old practices and you will need no donations.
If you guys kept charging 5 year old children $3 entrance fee to your
fleamarket you would be a rich club.

I will remind you of that FOR EVER.

FS: CABINET
I have a grey wrinkle cabinet (Bud?), measures 21.5"wX15"DX14"H,
and has louvres on sides and back. Back also is open, bottom 19.5"x3".
Cabinet has flip-open top, and is drilled/threaded for 19" rack mount
equipment. Front trim of red-lined chrome, top lid has round chrome
hardware handle. Cabinet is in pretty decent shape, some stains,
grunge, and about 1 sq. in. of chipped paint but will clean up OK.
Purists will want to repaint. $60 plus shipping. Can send photos. Tnx
& 73

Hi All,

Any ideas for a 20 meter CW transceiver (can be QRP also).
I have completed my DDS VFO and would like to use it with the rig. Any
ideas and suggestions are welcome.

Main requirement is CW.

Thanks in advance

Vasudeva (VU3BIP)

Quisiera saber informacion sobre como poder escuchar conversaciones de moviles, hace tiempo con la emisora de 2 mts se escuchaba los moviline, ahora creo que emiten entre 900 y 1800, �se pueden escuchar en esas frecuencia � estan codificadas y no se escucha?

Necesito informacion....

Gracias de antemano.

<< que emiten entre 900 y 1800, �se pueden escuchar en esas frecuencia � estan codificadas y no se escucha? >>

Estimado Javi...depende en el sistema, hay sistemas codificadas para protejer las conversaciones, o en formato "digital." Por estas transmisiones debe tener un descodificador o el mismo sistema tipo digital.

La mayoridad de las transmisiones aqui en los EUA eran analogo, hoy dia son digitales (dentro este rango). Asi, debe preguntar un tecnico de servicio radiomovil a ver que clase tiene la mayoridad de servicios en Espa�a. Tambien hay un sistema llamada "trunking" que se cambia frecuencias cuando encuentra un canal ocupado y que puede maximar el uso de las frecuencias registradas a un servicio. Debe tener un receptor capable de recepcion y descodificacion del codico de ruta/cambio. Hay "scanners" que sirvan por sistemas "trunking." Radios por el servicio radioafeccionado pueden escuchar algunas transmisiones si tiene la capacidad a escuchar en el rango...hay algunas con rangos hasta 1,2 ghz. (Como se venden Yaesu y Icom, mas otras fabricantes)

�Mil perdones por mi castilla�o!

Saludos;
Andrew

```

Old solar sunspot region 486 (now numbered 506?) is rotating back into view on the solar disk. At 1011Z 18-XI-2003, it produced an M4.5 flare, showing that it will play a significant role in space weather over the next week. Region 486 was the origin of the historic X28 flare of 4-XI-2003.

The other giant sunspot groups 493, 487 and 488 are also coming into view as they rotate from around the far side of the sun. Remember, these groups were the origin of many M- and X-class flares during the end of October and the beginning of November 2003. Do they hold enough punch to continue the strong flare activity we saw before? It does appear that they are complex enough to continue producting moderate flares, as we are seeing quite strong activity on the eastern solar limb.

Region 501 continues to have a structure that is capable of additional M-class flares. Already, today, this group produced 3 M-class flares, and the forth seems to be associated with the old, returning region 486. Sunspot region 501 will remain with us for the rest of the week.

At the same time, the large coronal hole that has continued to influence the geomagnetic activity is moving toward the edge of the sun, and will rotate out of view soon. The solar wind speed is slightly decreasing as a result. The orientation of the Interplanetary Magnetic Field is now mostly northward in its orientation (Bz is positive), so this has helped quite the geomagnetic activity, but not by much.

Speaking of coronal holes and coronal mass ejections: A CME was detected from a flare from region 501. This CME will at least partially impact Earth in the next 24 to 36 hours. This will elevate the already disturbed geomagnetic activity.

High Frequency propagation is expected to be fair to good for the next 12 hours or so. The slight lull in the geomagnetic activity has helped overall conditions, and there is an increase in the 10.7-cm flux level. This is causing a slight improvement over most low- to mid-latitude paths. But, conditions will become rough as we see an increase in X-ray flare activity as well as the arrival of new CMEs. HF propagation will be poor over the high-latitude regions (there is a chance of returning proton-event causing X-ray flares from the old regions now rotating into view), and poor to fair over the mid- and low-latitude paths.

The highest frequencies will have short and weak openings, with the strongest being on paths between north and south stations. The middle frequencies will be strong and reliable for the next 12 to 24 hours, but will experience degradation with the return of the flaring and geomagnetic activity. Low frequency propagation will be fair for the next 12 hours, then degrading with increased geomagnetic activity and flares.

X-ray flares cause short-term radio blackouts on the sunlit side of the Earth that can last mere minutes (with weaker flares) to several hours (with major flares). CMEs can cause geomagnetic storms, which cause the ionosphere to recombine (causing the ionosphere to lose its ionization). This causes the maxiumum usable frequencies to fall as much as 50% of normal. Having both X-ray flares along with geomagnetic storms can close HF down completely.

I will continue to monitor solar weather, and will post updates as events warrent. A full discussion is on-going at http://hfradio.org/forums/ - and live data is organized for your browsing at http://prop.hfradio.org/

Hi

we have an RF transmission that has some data modulated into it. The RF is transmitted at just under 1GHz. My question is how can we find out what the modulation scheme is? we are not sure even if it is analogue or digital, i.e. whether it is AM/FM or FSL/PSK/QAM etc., though suspect probably digital. Can anyone suggest how to find out what the scheme is?

thank you

sam

CODAR Collectors Club

George Mills, G0SSC,

36 Ivanhoe Road, Conisborough, Doncaster, DN12 3JT

South Yorks

I have the following CODAR items available

C45 Instruction Manual

AT5 Instruction Manual

Mini Clipper Wiring and assembly manual

CR70A General notes and schematic

RQ 10 X Q-Multiplier/Filter Installation instructions

T28 General information and service data

CR66 4 A3 Under chassis view of wiring

If you have any CODAR assembly instructions or information on any
CODAR equipment not listed here please get in touch.

Please include and SAE thanks.

George

what piece of equipment is transmitting it?
if you don't know, what is the precise frequency please?
where/when are you receiving this, is it a steady
transmission, pulsed, periodic, or what?

OK, sorry about the lack on information. What i'm trying to do is get access to the data being sent from a transmission from a 868 burglar alarm for some testing on the security of the system wrt jamming, interference etc. Obviously the first step is to gain access to the actual data.

The transmissions are short pulses, persumably containing a short data sequence, maybe a few bytes.

My initial thoughts were to 'grab' a sample transmission using a RF signal analyser from national instruments that can downconvert and demodulate the signal for me. However, the hardware for this is just shy of �20k, but allows the flexibility of demodulating virtually any signal, from mobile phones, bluetooth etc.

If I knew more about the signal, then it may be possible buy a less flexible solution, but cheaper.

Anyone got any experience of this?

Thanks

sam

I'm sending a IC-V8 (2m) up on a high altitude balloon, and was debating on what power setting to use. Ideally, I'd go with the higher power setting (5.5W), but due to the cold temperatures that are encountered (even with insulation) and limited battery life (even with a higher capacity battery), going with .5W is more reliable from a battery life standpoint. Also, I'm using an audio sound module (not packet radio) to relay GPS information back.

My question is: can I get clear reception using the .5W power setting, even when the balloon is, say, 75 miles away at an altitude of 20 miles?

Thanks in advance!
Dave

THIRD ANNUAL �7� CLUB PSKFEST
Sponsored by the Penn-Ohio DX Society (PODXS)

PURPOSE - To work as many stations as possible in the allotted time using PSK31 mode.

ENTRY CATEGORIES - QRP Single Band 5 watts, QRP Multiband 5 watts, Low Power 50 watts, Medium Power 100 watts (all powers maximum output).

DATE - 0000Z January 17, 2004 to 2400 January 17, 2004.

MODE - PSK31 only.

EXCHANGE - Call sign, signal report and state/province/country (SPC). Call "CQ PSKFEST".

BANDS - 80 thru 10 meters, no WARC bands. Work each station once/band. All contacts must be 2-way PSK31. No repeater, cross-mode or cross-band contacts allowed.

SCORING:
QSO points - Each contact counts one (1) QSO point, dupes count (0) points.
Multipliers - Each different state/province/country (SPC) worked. Use current ARRL DXCC list for country reference.

Final score = (Total QSO Points) x (Total Different SPC's).

AWARDS - Top scores from each continent receives a certificate, highest 070 Club entry gets Top Dog. All 070 Club member entries received will automatically qualify for an Attaboy. For more information on the 070 Club check out < http://www.podxs.com/html/070_club.html >.

ENTRIES - Send log data showing date, time(z), band, exchange received and claimed score. For entries with 100 contacts or more include a dupe sheet listing contacts in call sign alphanumeric order. Be sure to also include your call sign, address, e-mail address, entry class and 070 Club member number if applicable. Send your entry as a .txt file via email (best way) to < PSKFest@podxs.com > or < n9nds@yahoo.com > or via post to:

Brad Roberson
53 E. Robert Weist Ave.
Cloverdale, IN 46120 USA

All entries must be received by February 17, 2004. A listing of logs received and claimed scores will be posted on the 070 Club web site < http://hometown.aol.com/n3dqu/2004_pskfest_results.htm >. Entries with excessive dupes will be listed as check logs. All entries are subject to verification.

The Penn-Ohio DX Society (PODXS) reserves the right to disqualify entries deemed not in accordance with the above rules or contrary to the spirit of this event.

The W1AW FMT will run on November 20, 2003 at 0245Z (November 19, 2003, 9:45 PM ET). It will replace the W1AW Phone Bulletin normally scheduled at that time. It is recommended that participants listen to W1AW's transmissions prior to the event to get an idea on conditions to see which band (or bands) will be best for measurement purposes.
Format

The FMT will begin with a general W1AW (QST) call beginning exactly at 0245Z sent simultaneously on four amateur frequencies. The test will consist of three 60-second key-down transmissions, followed by a series of dits, followed by station identification.

The test will last for a period of approximately 15 minutes total. The test will end with a series of V's, followed by station identification. W1AW will identify before, during and after the transmissions.

The approximate frequencies are as follows:
80 meters 3584 kHz
40 meters 7049 kHz
20 meters 14051 kHz
15 meters 21054 kHz

Reporting and Results

The submitted report should include the time of reception, frequency measured and signal report, in addition to name, call and QTH. If possible, participants should submit reports on more than one band (but not necessarily on all four).

A Certificate of Participation will be available to all entrants. Those entrants that come closest to the measured frequency as measured by the ARRL laboratory will be listed in the test report and will also receive special recognition on their certificate.

Entries should be postmarked by December 19, 2003 to be eligible. Send entries to:

The on line locator sites also show topo maps. I foget which, but I think the one which launches from QRZ has a topo option.

Amateur Radio Newsline™ Report 1370 - November 14, 2003

Amateur Radio Newsline report number 1370 with a release date of Friday, November 14, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Internationally sponsored ham radio training begins in Albania, UOSat-14 goes QRT for good and ARISS honors the late Roy Neal, K6DUE, with an on the air -- space to ground event. The details on Amateur Radio Newsline report number 1370 coming your way right now.

(Billboard Cart Here)

**

BREAKING NEWS: AUSTRALIA TO BE CODE FREE

The Australian Communications Authority has announced to QNEWS that as of January First 2004 CW will no longer be a requirement for Amateurs to operate on the HF bands. From Monday November 17th, the ACA website will have the press release under the signature of Dr. Bob Horton. Full details on next weeks Amateur Radio Newsline report. (Q-News)

**

RADIO EDUCATION: AMATEUR RADIO PROGRAM OPENS IN ALBANIA

We told you a few weeks ago that it was going to happen and now it has. Ham radio training is now available in Albania. Jeramy Boot, G4NJH, in the U.K. takes an in-depth look at the new internationally sponsored training program:

--

A unique amateur radio program started in Tirana, Albania the 9th of November. Thirty-four third and fourth-year university students began a five-week amateur radio course using RSGB study material as the reference books.

The course will culminate in CEPT license examinations. It is being run in cooperation with Mr. Spartak Poci, the Albanian Minister of Telecommunications, and the Polytechnic University of Tirana.

A unique part of the program is the way in which amateur radio is being integrated into the regular university courses. The course will not only teach amateur radio up to the RAE Full-license standard, but also the role of amateur radio in society, QSL'ing practices and successful Dxpeditioning.

During the five-week period, ZA1A will be active on many bands and modes while demonstrating amateur radio to local telecom and education administrators, as well as to the students. Multiple locations will be used and several stations may be active at the same time. After the course, all the donated equipment will serve the amateur community.

Jeramy Boot, G4NJH, in Nottingham, the U.K.
--

This unique, one-of-a-kind ham radio training program is supported by Region 1 of the International Amateur Radio Union. Additional assistance comes from several national ham radio societies, the Northern

California D-X Foundation, Vertex Standard, Fluidmotion Corporation, Malev Airlines and the Rogner Europark Hotel in Tirana Albania. (RSGB, OH2BH)

**

RESTRUCTURING: SWEDEN MAY GO CODEFREE

Sweden could be next nation to drop the Morse requirement for ham radio licensing and end C-W testing.

The November issue of the Swedish national amateur radio society's magazine, QTC, says -- and we quote: "Soon - very soon - the requirement for knowledge of C-W for High Frequency band access will be dropped for the country's would-be amateurs and current Class 2 amateurs".

SM0SMK is the President of the Swedish national society. He says that they hope the Morse code test requirement will be removed at the end of the year. (GB2RS)

**

HAM RADIO IN SPACE: OSCAR 14 GOES SILENT

One of ham radios most popular emergency communications Easy Sats has gone Q-R-T. This with word from the Surrey Space Center that U-Oh-Sat Oscar 14 has finally reached the end of its mission after an amazing 14 years in day to day service.

Launched in January of 1990, U-Oh-14 was the first 9.6 kilobit per second amateur digital communications satellite. It literally pioneered the packet satellite or PacSat concept.

After about 14 months on-orbit, U-Oh-14 was switched to commercial frequencies for humanitarian service by an organization called Satelife. It was used by them until 1997 when it was returned to Amateur Radio service and configured as an F-M repeater in space.

A failure of one of the cells of its on-board battery supply is keeping the entire pack from recharging from the satellites solar array. This causes the transmitter to shut down shortly after it is commanded on. This situation lead to the decision by controllers to terminate the micro satellites mission after more than 72,000 orbits of the planet. (RSGB)

**

RADIO HONORS: ARISS TO CELEBRATE THE LEGACY OF ROY NEAL, K6DUE

The Amateur Radio on the International Space Station team will be honoring the memory and the legacy of the late Roy Neal, K6DUE. This, with an operating event involving the crew on the orbiting outpost and hams on the ground. Amateur Radio Newsline's Norm Seeley is here with the details:

--

In a joint release, Frank Bauer, KA3HDO and Sergej Samburov, RV3DR of the ARISS International team say that the event is being held to commemorate Roy Neal's vision and dedication. This, in the development of manned Amateur Radio space communications.

And as a celebration of Roy's contributions ARISS has requested that the current I-S-S crew take to the airwaves the weekend of November 29th and 30th to communicate with as many ground based amateur radio operators as they can. After the initial two days, the operation will continue through the month of December using both voice and packet.

Ham radio from the International Space Station signals will be on the usual frequencies. These are 145.80 MHz as the worldwide voice and packet downlink. That's where you listen.

The worldwide packet radio uplink channel is 145.99 MHz. 144.49 MHz is the voice uplink for the America's and the Pacific while 145.20 MHz is where to call if you are in Europe, Central Asia and Africa.

Roy Neal, K6DUE, died last August 15th due to complications following heart valve replacement surgery. He is very much missed by everyone in the world wide ham radio community especially by us here it the Amateur Radio Newsline where he was a friend and colleague.

The full text of the ARISS International release about this special operation commemorating Roy Neal's contributions to manned ham radio in space is now at our website. That URL is www.arnewsline.org. Scroll down to the new "This Just In" area and you will find it there.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

According to Bauer and Samburov hams making contact with the Roy Neal Commemorative Operation will be eligible for a special certificate. More ham radio in space news later on in this weeks report. (ARISS)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W9EAR repeater of the EARS Repeater Network serving Indiana, Kentucky and Illinois.

(5 sec pause here)

**
AN ARNEWSLINE(tm) EDITORIAL: AN ANONYMOUS NOTES OR E-MAIL PLEASE

I'm Bill Pasternak, WA6ITF, with a short editorial comment. Actually, its more of a reminder that the Amateur Radio Newsline does not accept anonymous letters and e-mail as valid information or story leads.

Every so often, a letter or e-mail will arrive making all sorts of claims. It might deal will allegations that a ham radio test session is corrupt, or identifying someone as the purported jammer of a net or that a ham is doing business over a local repeater. This past week we received two such notes. One claimed that a repeater was discriminating against a group of individuals. The other claimed corruption in the management of a ham radio convention. Both had something in common -- they were unsigned. And here's our policy in dealing with unsigned correspondence. Ready?

(Sound of actual letters being torn up and toss in the trash basket.)

That's right, you just heard me rip it up and toss it in the garbage can. And the reason is simple. If the person sending the letter or the e-mail does not have the courage to sign it, then the chances are that he or she is attempting to use us and you in a personal vendetta. And friends, we are not going to let ourselves or you to be used in someone's private war. That's been our policy since our days as the Westlink Radio Network and it is still our policy today.

The bottom line. If you are going to send us information you must provide identification and be ready to take responsibility for your words and actions. I you are not willing to do so, please save us the time and effort of doing this -- and tossing it in the trash.

This has been an infrequent Amateur Radio Newsline editorial. In Los Angeles, I'm Bill Pasternak, WA6ITF. (ARNewsline(tm))

**

ENFORCEMENT: ALLEGED TOWER UNBOLTER CAUGHT

A follow-up to a story we aired two weeks ago about a man trying to unbolt power transmission towers in three western states. He has now been captured.

According to news reports, the suspect is identified as Michael Poulin. He claims that his actions illustrate how vulnerable the power grid might be to acts of terrorism. At airtime, charges against him are pending. (Published news reports)

**

ENFORCEMENT: IRLP HARASSMENT

A pair of mid-West hams are being asked to explain their actions their on the air activities. The FCC's Daryl Duckworth, NN0W, tells us who and why:

--

Duckworth: "Two Oklahoma amateurs; Johnny Adams, KD5QJG, of Dell City and Jack Stokes, KE5KR, of Oklahoma City have been queried regarding complaints of deliberate interference and harassment of repeater users on W5QO, 144.650 and 145.250 MHz."

--

The FCC says that at the time the incident occurred, the W5QO repeater was functioning as an IRLP node. Adams and Stokes were given 20 days from the day that they received the FCC's letter to answer the charges. They were also warned that failure to respond could result in the revocation of Amateur station license and suspension of operator privileges. (FCC, RAIN)

**

ENFORCEMENT: HEY YOU LEFT THE RADIO ON

The FCC also wants to know why a ham may have walked away from his car with his rig running as a cross band repeater. Again, the FCC's Daryl Duckworth, NN0V:

--

Duckworth: "A complaint of two hours of interference on September 16th, coming from an amateur transceiver unit, in a car, unidentified, unattended, and operating in crossband mode has prompted the Enforcement Bureau to inquire of the vehicle's owner, KG6QKR, Angel Carballo, of Freemont California. The vehicles was located at Hamilton and Bascon Avenue's in San Jose (California) at the time of the interference to 145.23 and 146.94 MHz."

--

Like Adams and Stokes, Carballo was also given 20 days from the date he received the FCC's letter to file a response. (FCC, RAIN)

**

RADIO LAW: A CLARIFICATION ON EQUIPMENT SEIZURES

Phil Kane, K2ASP, says in the CGC Communicator that the FCC does not confiscate equipment.

Kane, now an attorney in Oregon is the retired District Director of the FCC in San Francisco California. He says that he served many times as an on-scene supervisor during events such as the recent raid on an unlicensed broadcaster where equipment was taken. According to Kane, seizures are made by the U.S. Marshal Service executing an order of the Federal District Court. Any items taken are held pending court action of forfeiture of the equipment to the Government.

According to Kane, the FCC agents on scene are there only as technical experts. They identify to the Marshals what equipment falls under the purview of the seizure warrant.   (CGC)

**

RADIO RULES: THE FEDS ON FRS

Federal government entities have been authorized to purchase and operate radios certified by the FCC in the Family Radio Service. This, according to the May 2003 Manual of Regulations and Procedures for Federal Radio Frequency Management.

The manual says that pursuant to Part 95 Subpart B of the FCC Rules and Regulations, government users will be accorded the same privileges as non-federal users. Also, since FRS users must share each channel and no user is assured protection from interference caused by another authorized user, federal entities may not purchase and operate F-R-S radios for planned communications operations that safeguard human life or property.

The Manual of Regulations and Procedures for Federal Radio Frequency Management is a great publication that has a ton of useful information. The only drawback is that it costs $342.00 new. However it is available for viewing and download, chapter by chapter, at www.ntia.doc.gov/osmhome/redbook/redbook.html   (CGC)

**

HAM EDUCATION: NEW ON-LINE HELP FOR INSTRUCTORS

The American Radio Relay League's Field and Educational Services branch has announced a new resource for active Volunteer Instructors. Titled the Online Instructor Primer, it's a new compilation by Linda Mullally, KB1HSV, that's jam-packed with helpful tips, links, and tutorials sure to help instructors eager to try new ideas and approaches. More information about it is at the ARRL website. Just take the link to www.arrl.org/FandES/ead/instructor/oip (ARRL)

**

NAMES IN THE NEWS: PATRIOT NAME CHANGE

Turning to this weeks names in the news. Word that the Patriot DX Association has changed its name to the New England DXCC with a new mission. That of fostering participation in DX'ing and the DXCC program.

The group has also announced the creation of a new operating event called the N-E-D-X-C-C Challenge. According to an October 27th press release the purpose of the Challenge is to stimulate on-the-air operating activity among club members to make contact with many DXCC countries as possible during the prescribed activity periods. More information is on the web at www.nedxcc.org (Via e-mail)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: SOUND OF A BLACK HOLE

From the science page this question. Did you know that the voice of a black hole is a deep, deep bass? In fact, its 57 octaves below middle C. It is and Jim Meachen, ZL2BHF, has more:

--

The Chandra X-ray Observatory has picked up sound waves for the first time from a cluster of galaxies 250 million light years away. Astronomers at the Institute of Astronomy in Cambridge, England, discovered the sound waves while analyzing the Chandra images of the Perseus cluster. This is an immense grouping of galaxies held in formation by the powerful tug of a super massive black hole.

Andy Fabian is a professor at the Institute of Astronomy. He says that a close study of the fine detail collected by Chandra shows ripples in the X-ray pattern that are caused by sound waves excited by the energy from the black hole.

Fabiam says that the sound produced by the black hole is a B flat, the same pitch as a key near middle C on the piano. But the song of the Presses Black Hole is 57 octaves below that middle C. This is a tone or frequency more than a million, billion times deeper than the limits of the human ear,. Fabian says that makes it the lowest note known in the universe.

For the Amateur Radio Newsline I'm Jim Meachen, ZL2BHF, in New Zealand.

--

Scientists expect more insight on this as the experiments progress. (Science Today)

**

EMERGING TECHNOLOGY: NEW FRACTILE ANTENNA DESIGN

Engineers at Pennsylvania State have developed innovative design methods for a new class of antennas. One composed of an array of fractal-shaped tiles that offer anywhere from a 4 to 1 to 8 to 1 improvement in bandwidth compared to their conventional counterparts.

According to Space Daily, the new broadband antennas are composed of irregular but self-similar, repeated fractal-shaped unit tiles called "fractiles." These "fractiles" cover an entire plane without any gaps or overlaps.

While fractal concepts have been used previously in antenna design, the Penn State research team are the first to introduce a design approach for broadband phased array antenna systems. One that combines aspects of tiling theory with fractal geometry. (ANS, Space Daily)

**

HAM RADIO IN SPACE: AMSAT UK DONATES TO LAUNCH FUNDS

AMSAT-UK is funding the development of two new amateur radio satellites by donating œ10,000 to each of two projects in the USA and Germany. In accordance with their constitution, at their meeting on Saturday October 25th, AMSAT UK decided to make an immediate donation of œ10,000 to the AMSAT North America's Project Echo Launch Campaign Fund.

Also at the meeting AMSAT U-K decided to earmark another œ10,000 for transfer to AMSAT Germany to support the Phase 3 Express project. This, when a suitable component for funding can be identified.

Project Echo satellite is due to be launched next March 31st. The Phase 3 E Express ham satellite is likely to get a ride to orbit in the 2005 to 2006 time frame.   (ANS)

**

BEACON NEWS: UK PROP BEACONS BACK ON

If you are a microwave D-X'er, listen up. This one is for you. It comes from the United Kingdom and says that two of that nations highest frequency beacons are back in full time operation.

Both are part of the South Coast microwave beacon complex. GB3SCX operates on 10 GHz and GB3SCK on 24 Ghz. The two units are again operational following a major rebuild. Both have had their output power increased, raising them at least 10 dB above their previous levels. And there's more.

GB3SCK has been retuned to transmit on 24,048.905 MHz in order to comply with the new 24 GHz bandplan, which will come into force at the beginning of 2004. Also, the GB3SCC which is on 5760.905 MHz has had its keying duty cycle adjusted. It now transmits callsign and location details, followed by plain carrier for a total of 45 seconds. It then stops transmitting for 15 seconds to permit cooling before resuming its operation. Reception reports on any of these beacons go to John Fell, G0API, at his Callbook address. (GB2RS)

**

DX

In D-X, MW0USK reports over QRZ.com that M1DAZ, who is on active duty with the British Forces Broadcast Services in Iraq, has obtained official authority to operate with the callsign YI9DAZ. Darran will be active around the bands for the next couple of weeks using a Yaesu FT-100 and Atas aerial from the Southern part of the country. Most of his operation will be on P-S-K 31 so that he does not disturb his room mate who is the presenter of the early morning radio show. QSL direct to M1DAZ at his home address. (qrz.com)

F6BUM will be active on CW, SSB and RTTY from various regions of Peru. This, between the 5th of November and the 5th of December. He will be using the callsign OA, followed by a district number, stroke F6BUM. (GB2RS)

Also, three operators from Japan will be active from Kathmandu, Nepal, between the 16th and 22nd of November. The callsigns will be 9N7AU, 9N7LN and 9N7SZ. They will operate on 40 to 6 metres using two HF rigs and a 6-metre rig. (GB2RS)

And, a VHF DXpedition to La Palma in Square IL18, should be active through November 19th. This, with DJ6JJ and DL1EJA operating during the ARRL EME Contest and scatter during the Leonids meteor shower. Their station is reportedly using use high power to four 12-element Yagis with full elevation control. For all of these operations please QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: THE TECH SIDE OF THE NYC MARATHON

And finally this week a look at two other ham radio aspect of the New York City Marathon. The way hams organize and the technology that they use. Here's Henry Feinberg, K2SSQ:

--

Last week Communications Coordinator Steve Mendelsohn, W2ML, told us that it takes 411 radio amateurs to keep the New York City Marathon moving along. This week W2ML says that it also takes a lot of well organized ham radio networks to keep the messages flowing:

--

Audio only. Hear the newscast in mp3 at www.arnewsline.org

--

According to Mendelsohn, ham radio communicators are aided by a lot of modern technology. Its science that literally gives them a leg up on the contestants:

--

Audio only. Hear the newscast in mp3 at www.arnewsline.org

--

And this year ham radio expanded the use of its own kind of digital positioning technology:

--

Audio only. Hear the newscast in mp3 at www.arnewsline.org

--

According to Mendelsohn, it's human beings -- trained ham radio communicators that makes for a smooth race.

In New York, I'm Henry Feinberg, K2SSQ, for the Amateur Radio Newsline.

--

Next week, how it all gets put together. Please be with us.
(ARNewsline)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2003. All rights reserved.

Hi David,  not really sure but it seems in this hobby, height is
everything.
I believe that low power should be fine.  At that height, it should be
heard in many states.  Just my opinion though since I'm not an expert on
this.
73 and good luck!

Mark

rec.radio.amateur:5998 rec.radio.amateur.dx:792 rec.radio.amateur.misc:2032
rec.radio.shortwave:5145

A severe geomagnetic storm is in progress at this time. As I write this bulletin, the planetary K index (Kp) is at 7. The Aurora Index is at 10 (maximum). The Bz (horizontal component of the Interplanetary Magnetic Field) is strongly negative (oriented southward), at -55.1 nanoTeslas. This stormy geomagnetic activity is causing strong ionospheric recombination, decreasing the maximum usable frequencies on all radio link paths. HF propagation at all latitudes is poor.

This geomagnetic storm is a result of the arrival and passage of a coronal hole mass ejection from 18-XI-2003. The solar wind speed increased from 430 km per second to 750 km per second, with a very strongly negative horizontal IMF component. Whenever the Bz is negative (whenever the horizontal IMF component is oriented southward), the IMF combines with the magnetosphere in such a way as to create geomagnetic disturbances and ionospheric storms. Aurora is also a typical result of such interaction.

This geomagnetic storm is expected to continue through the end of 20-XI-2003. Additional CME arrivals may continue to keep the geomagnetic activity high.

At 0747Z, 20-XI-2003, a flare peaked at M9.6, further causing degradation of the HF propagation, on the sunlit area of the Earth. Continued C, M, and possible X flares are possible today and for the next week. The major sunspot groups from the end of October and the beginning of November have and are returning into view, increasing solar activity.

Today's HF propagation outlook is poor. While the 10.7-cm flux is climbing, the continued geomagnetic storm will significantly degrade higher frequency propagation. The moderate to major flare activity expected will also degrade mid-HF frequencies. Nighttime propagation on low to mid HF frequencies will also suffer, as the E-layer will be significantly recombined, decreasing its MUF.

VHF propagation via Aurora, Aurora-E, and Trans-equitorial propagation (TEP) will be fair to good. I welcome reports, if any, of your success on VHF during this period.

More information as events warrent will be posted in follow-up bulletins. Live information is on-going at
http://prop.hfradio.org/ and a discussion is at
http://hfradio.org/forums/

A severe geomagnetic storm (G4) is in progress due to the arrival of coronal hole mass ejections related to the returning sunspot group 484, now numbered 501. Some reporting stations show a K index of 9. The current planetary K index (Kp) is 8 and the Aurora index is 10. This is expected to possibly increase to a Kp of 9, a geomagnetic storm level G5, through the day. HF conditions are poor. MW conditions are poor.

Visual Aurora is possible today at low-latitudes. Aurora-mode propagation (Au and Au-Es) is possible and is already reported. Visual Aurora is occurring now in night regions, and is possible to occur tonight during darkness in the Western Hemisphere (e.g., North America).

More information as events warrent will be posted in follow-up bulletins. Live information is on-going at http://prop.hfradio.org/ and a discussion is at http://hfradio.org/forums/

I'm not sure of the regulations, but I think something that high may
need permission to be there. Possibly even a trasponder.

When someone (from nowhere) makes the kind of judgement that you
and (AFAIR) Terry have made about relative intelligence, the
exact opposite is usually true. When making claims of general
superior intellect, that tends to show that you have no valid
arguments.

I have found that there are individuals who have fantastic
intellect, but sometimes not very competent (even in a general
sense.) Your own dyseducation has probably distorted your
own view of reality beyond recovery, but that doesn't NECESSARILY
make you stupid. There are alot of very INTELLIGENT individuals
in jail.

John

Do read what I wrote. I'm agreeing with Paul that Terry's claim -
flattering as it may be - is rubbish. I'll go as far as to say that I
may be somewhat smarter than Paul, but I'm not really in a position
to produce a relaible or useful judgement.
>
> I have found that there are individuals who have fantastic

Agreed. Mensa was set up for just these sorts of people.

> Your own dyseducation has probably distorted your
> own view of reality beyond recovery, but that doesn't NECESSARILY
> make you stupid.

My brain-washing was organised by a different bunch of educators than
your brain-washing, which probably means that we were both
dyseducated. You strike me as worryingly ill-informed, while I strike
you as worryingly misinformed, which - not unsurprisingly - suggests
to me that I've made a better recovery from the attentions of the
Australian school system than you have from the American equivalent.

I haven't had any response from you on my proposed scheme in which we

endeavour to remedy the faults we perceive in each other's education,
so I'll defer further comment.

> There are a lot of very INTELLIGENT individuals in jail.

If they were so clever, how did they get caught?

Perhaps intelligence and cleverness don't necessarily go hand-in-hand?

Thanks, Bill. By your standards that amounts to a *huge* compliment.
:-)

The cruel hand of Fate? One bad day? Invincibility complex? It could
be anything. But John's right: some of the brightest people you could
ever encounter languish in prison - and the resourcefulness of many of
them is simply staggering.

Harry,

I am using a Siemans wireless hub from my DSL modem to my wireless PC
connections in my house with no RF issues.

Thanks for the feedback, Bill. Yours is the only response I've had so far.
I'm surprised that I didn't get a bunch of input. I expected there would be
a lot of wireless users in the ham community.

I run the legal limit and the 150 feet of Cat 5 cable to the shop runs
parallel to and within 5 feet of the cables going to the tower
(  http://www.rogerhalstead.com/tower.htm  )for about 75 feet.  In the
shop the computer ( tower case - 2000 Athlon XP Plus) sets right
beside the Henry 2K4  (within about 4 inches). The monitor and
keyboard set beside the Icom 751A and on a wood counter top about 8
inches above the 2K4.  That station is now feeding a HyGain AV-640 at
32 feet.  I run 40 through 10, plus 144 and 440 out there.  In the
house I run 160 through 10, plus 6, 144, and 440 with the legal limit
up through 10 and soon on 6-meters.  The DSL router, plus a 5 port hub
set within 4 feet of my regular station, including an old Alpha 76A.
One computer is under the hub and router and the second computer about
4 feet to the east.  There are two scanners and one printer connected
to this machine (Athlon 2800 XP Plus).  Both the HF and the 2-meter
rig are tied into the one computer. (1900 Athlon XP Plus)

So far...I've not had any RFI problems on any band.

The only problem I have had is there is so much AC in my den that the
mike was picking up the AC and I had to ground the mike cord shield to
```

the chassis, which caused it to lose some of the mike functions). It was not RF feedback, but rather the AC field(s) with all the electrical equipment in such a small room.

> > spots sources is lost. With WiFi I'll be able to separate the wired part of

It depends more on the make and models of wireless gear you use than the ham shack, unless you have some grounding issues. Some gear (according to the wireless group) is almost bullet proof while other equipment is darn near sensitive to a sneeze.

There are reports of *other* wireless devices such as cameras and telephones bothering *some* equipment. A friend can not run his web cams AND a 2.4 Gig telephone at the same time...He took the phone back for a 5 Gig model and has had no problems since.

As long as you stick with good equipment (maybe with an option to test it and replace with something different if it does have problems) and _do_not_ try to extend the transmit and receive ranges beyond the stock installation I'd not expect any problems ... Unless you start operating 2.4 and 5 Gig EME. I also stay away from open wire line. I use strictly coax from 160 on up.

The wireless devices may be spread spectrum but they are not immune to overload from a strong, discrete signal. Typically when that happens you just lose the connection which should re-establish itself if the system is properly configured. OTOH as in the case of the web cams and telephone which were on 24 X 7 the phone had to go. Of course with all the pop up adds and spaming from X-10 I'll never purchase any of their equipment any way.

I hope to install a pair of modified digital video cameras on top of the tower with wireless signal, but hard wired control. The tower is high enough to see the horizon over the trees from the top. Two cameras up there with 20:1 optical zoom should give some good storm coverage with a couple of big, but thin screen monitors up on the wall.

BTW, the tower gets hit by lightening about 3 times each summer. Only once this past summer and that was just a few weeks ago. (I gotta get static balls on that thing) I have a fried coax splice in 9913 laying on the desk beside the monitor. It also took out the RF choke at the feed point. The rigs and computers were all up and running at the time. The only apparent effect in here was the UPS switched on this computer, but the others kept on running. Last summer I lost one Polyphaser in the line from the 2-meter array. They are on top at 130 feet.

All coax is now Times Wire LMR 400. I dislike 9913 with a passion ever since the lightening blew off all the coax seal up on top. I had

water running out of my 2-meter rig and onto the desk about 20
minutes later. Of course there was no plating left on the connectors
either.

Oh! If you do go wireless be sure to treat the security issues as if
you were connected to the internet at all times.

If you have never heard of War Driving, some drive around with
portable wireless gear, looking for open connections and are quite
happy to join your network to connect to the internet, or maybe even
share information with you. Well at least share your information.

Roger Halstead (K8RI EN73 & ARRL Life Member)
www.rogerhalstead.com
N833R World's oldest Debonair? (S# CD-2)

Time to go cut that fried piece of cable apart and see if I can save
any connectors.

It's not my fault you're so unemployable you can't afford anything. I bet you're driving that used-over 100,000 mile shitbox because you can't aford a newer car, too.

> required to get the equipment needed to even have a decent station on HF.

"On their "Root?" No wonder you're a goddamned no -code technician TWAT, you don't even know that antennas usually go on roofs, not roots. What a dumbass.
You're just full of excuses, twat. And you can add lack of ambition to own your own home to your mounting list of deficiencies.

> >
> >> but then again, if all you can do is insult, that means you don't have

> wa wa waaaaah! cry me a river....

The only crying is coming from you, no-code technician twat.

Can you say hypocrite? In addition to your inability to upgrade your license, you severely lack skills in debate. You proved it all by your lonesome, little twat.

> throwing insults just means you don't have brains enough to debate.

Making excuses for your lack of abilities isn't debating, little twat.

> I'd say you are full of it (-... ..- .-.. .-.. ... . -) (just so

Sam,
  I've got one confirmed PSK31 QSO in my LoTW account, so I'd take a look at the adif that your logging program is generating, there might be something amiss there.

I did a search on QRZ.COM (http://www.qrz.com/search1993.html). They have a
section that contains old callsigns dating back as far as the 1980's, but the
callsign would have had to have been still active in 1993, which is when this
database is from. There was no record found. There is one hope for you, from

http://www.qrz.com/i/pre1987.html

"The W5YI-VEC will perform exhaustive hand lookups into their massive
collection of old callbooks for a $5 fee. Contact them at 1-800-669-9594."

Hope this information helps!

Thanks Roger,

What is the "wireless group" you mentioned? Does it have an archive where I could look up the threads discussing which equipment is bullet-proof and which is not?

Good question. I used to be regular but lost it when my system crashed a while back. I don't remember if it was one of the Yahoo groups or if it was a regular news group, but I think the latter.

There was a lot of discussion as to equipment configuration, antennas, open networks, interference between networks in high density population areas...and of course the hardware and set ups.

I remember some of them were working at extending their range and then complaining when they ended up with interference from other networks. One issue that cropped up quite regularly was how to protect systems from those out "war driving".

I wish I could remember as I'd like to follow them again as well.

Possibly a google search...I know I did quite a bit of posting but have not been able to find any of them.

Hi,

Does anyone knows if the AT-440 is the same as the AT-450 ?
I have a TS-450 and want to build in an AT, at this moment I only found an AT-440 at a reasonable price.

Kind regards,

Karel

If anyone has the Severnside TV Group's web address bookmarked, it changed
today to "www.stvg.co.uk", its old URL will be discontinued in a few weeks
time.

Well, it looks like *they* are expanding BPL.  There was a notice on
the radio that the Saginaw, Bay City, and Midland Michigan areas are
going to be the next test bed for BPL.

I don't have any time line yet.

Re: 73 Amateur Radio Today magazine will stop publishing with an October/November issue.

Sad, in a way. But how much of 73's problems were caused by the shrinking world of hamdom in the U.S., and how much was caused by the reduced segment of ham subscribers caused by the narrowness of the self-proclaimed "El Supremo and Founder" Wayne S. Green II, W2NSD?

Over the years, I subscribed and had two articles published in 73 - an honor that paid. But Wayne didn't like us brain-damaged extras and berated CW operators at every opportunity. Hey, I could take that. But, then he didn't like contests either, so he refused to publish contest information in his magazine. Those of us that wanted to know what contest were on, or at least what exchange was expected on contest weekends, had to take another publication to find out. By the time I stopped subscribing to 73, it had become a mostly no-code VHF enthusiest's publication - with the downbeat editorials of Wayne Green providing much of its contents. I still hate to see it go, even though I also wonder how it managed to stay in print as long as it did.

Hang in there CQ. You too, QST.

AK

Sounds like time to trade in all the QRP rigs for 1.5 KW amps, just we can
still be heard on the air after BPL takes hold. :-) K4YKZ

Amateur Radio Newsline™ Report 1365 – October 10 2003

Amateur Radio Newsline report number 1365 with a release date of Friday, October 10th 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Deciding the future of ham radio was not an easy task in Geneva and the problem of Broadband over Powelines continues to grow world-wide. Find out the details on Amateur Radio Newsline report number 1365 coming your way right now.

(Billboard Cart Here)

**

IARU: HOW RADIO REVISIONS CAME TO PASS

The word is out. Some of those who attended last springs World Radiocommunications Conference in Geneva Switzerland are now saying it was not all that easy to reach decisions. Q-News Graham Kemp, VK4BB, has the rest of the story:

--

Just now some of the background work done at WRC-03 is coming to light. The work was intensive. The main conference hall had over 1500 seats, simultaneous translation in 7 languages often more than 10 meetings going on at the same time, distributed in three adjacent buildings.

Some meetings went on till the wee hours of the morning and resumed at the usual time the next morning!

The growing number of completely new radio services clamouring for spectrum allocation, such as for example space borne radars for terrestrial observation, high altitude platforms together with the ever increasing number of new ITU Member States with active participation made the deliberations that much more difficult.

For Q-News Australia, I'm Graham Kemp. VK4BB, reporting for the Amateur Radio Newsline.

--

It was the decisions made at this conference that lead some nations to abandon C-W testing of radio amateurs and also spur the ongoing, world-wide Morse code debate. (Q-News)

**

RADIO LAW: BPL BECOMMING A HOT ISSUE WORLD-WIDE

Meantime, down here in Kiwi-Land as well as around the world, the debate is heating up over Broadband Over Powerline or BPL as its called in North America. This is the technology that claims to provide broadband high-speed Internet services using domestic power lines for system wide transmission and Internet connectivity.

For those not aware, BPL works by injecting the data signal into the powerline near the electricic substation and it travels along the line to the user. In some proposed systems, it interconnects cities using existing long distance power distribution grids.

The problem, of course, is that powerlines are not radio frequency cables. They are not shielded and leak RF energy causing a level of wideband noise in the vicinity of the cable. And as tests conducted by the ARRL have graphically proven, powerlines radiate for long distances.

AC powerlines are a very noisy transmission medium, with spikes and other noise. To make it work, BPL operators have to use higher injection powers to get their data signals to propagate along the cable. Higher injection power mean higher emissions, and this is bad news for all High Frequency radio operators.

By way of example, current proposals in Europe would raise the level of the background noise level on H-F by some 60-70 dB within 3 meters of the cable. Further away, the rise would be less, but still considerable.

Because of this, Broadband Over Powerlines poses a threat not only to amateur radio. Users of many low power devices such as security systems that tag products in shops are very concerned. And High Frequency broadcasters world-wide are fighting to support sensible emission limits for powerline breoadband communications.

But that’s not where it ends. In many places security services are worried. Unfortunately, in some countries, government departments involved in security have been told to not object to BPL as the government policy is to support it.

Civil Aviation communication and aero-navigation can be threatened by BPL. There are reports of an air accident in Canada being directly attributable to interference from broadband cable systems.

And this is only the beginning. New plans for BPL will attempt to use much higher frequencies which could immediately pose a threat to some nations emergency service communications. This is an extremely serious issue for amateur radio world-wide and for other users of the High Frequency spectrum as well. (NZART)

**

RADIO AIDS: NOAA PROPAGATION SERVICE TO GO QRT

Amateurs around the globe may soon loose the propagation information system operated by the United States National Oceanic and Atmospheric Administration. This includes real time data on the state of the interaction of the earth's magnetosphere with the solar wind and state of the earth's magnetic field.

These tools have been invaluable to ham radio operators world-wide for many years. The reasons it may be going away? Budgetary cutbacks and lack of future funding. (Published news reports)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Xerox Amateur Radio Clubs WD6CZH repeater serving Los Angeles from El Segundo California.

(5 sec pause here)

**

ENFORCENMENT: HAM REPEATERS ARE NOT FOR BUSINESS

Back in the United States, the FCC has written to a Lakewood New Jersey to ask him why a repeater bearing his his call sign is being used as an adjunct to a business band radio system. The FCC’s Daryl Duckworth, NN0W explains:

--

Duckworth: “Martin Gross, N2DCG, of Lakewod New Jersey, has 20 days to reply to an inquirey about a repeater on 448.825/443.825 MHz and is used as an adjunct to WNVF 627, a business radio system for the Hatzolah Emergency Medical Services, rather than for Amateur Radio purposes as set forth in Section 97.1 of the Commission’s rules.”

--

In a September 11th letter, the FCC notes that Gross’s repeater is not coordinated. (FCC)

**

AT THE FCC: THE FCC's MASTER SEARCH ENGINE

The CGC Communicator reports that there is an obscure but very important search engine at the FCC website. One that allows you to comb through most of the Commission's licensing systems for specific information.

According to CGC, member databases include Universal Licensing System, Experimental, Cable Operations, Mass Media and International Bureau. Queries can be set up by frequency range, state, county, location call sign and licensee name. More information is in the cyperspace address found at http://gullfoss2.fcc.gov/reports/index.cfm or the backup site at http://svartifoss2.fcc.gov/reports/index.cfm (CGC)

**

RADIO LAW: CABLE TOLD TO SOLVE ITS OWN PROBLEMS

FCC Chairman Michael Powell has told the cable industry that it needs to work out its own problems before appealing to regulators for remedies. At a recent appearance at the annual cable sector conference Powell highlighted issues that have driven a wedge between cable companies and local broadcasters. Specifically, the rules that dictate what over the air channels cable outlets must carry on their systems.

Currently, cable companies are required by law to carry local broadcast channels. But broadcasters are also hoping regulators will eventually force cable companies to carry both digital and analog signals during the broadcasters' transition period to all digital transmission. But cable companies argue that if they were forced to carry both a broadcaster's regular analog signal and digital signals, it would significantly deplete their capacity to air other channels. (Published reports)

**

RESCUE RADIO: ORGANIZING 60 METERS IN VA

Bringing emergency communications to 60 meters is the theme of a new net organized by Virginia RACES, Inc. This, by providing a twice monthly opportunity for equipment tests in the new spectrum asllocation.

The Mid-Atlantic Emergency Net began opeeration on October 1st. It now takes place the first and third Wednesdays of every month at 2000 hours Eastern Time on 5330.5 using upper sideband.

All ARES, RACES and other emergency communications organizations within reliable communication range of the net are encouraged to participate. Liaisons are also invited with similar groups in neighboring states. (Via e-mail)

**

GETTING YOUR E-MAIL: AOL BLOCKS QRZ.COM

If you use America Online as an internet service provider and are waiting for e-mail or a password from QRZ.com, this is for you. A-O-L has decided to unilaterally block delivery QRZ.com e-mails unless a specific A-O-L user goes to the trouble of unblocking his or her own account.

According to QRZ, they have been getting up to 50 emails a week from America Online users who have not received their QRZ passwords or Links. QRZ advises that it is A-O-L and not them that has placed spam filters on incoming e-mail. To fix the problem, users must log onto A-O-L, go to “SPAM CONTROL” and set it so that e-mail from QRZ.com as an allowable e-mail address.

QRZ adds that it has no other way of sending America Online users a password or log on information as A-O-L has QRZ e-mail filtered out. (qrz.com)

**

HAMVENTION 2004: YOUR IDEAS ARE SOLICITED

Turning to the convention scene, the planners of Hamvention 2004 are putting out a call to the world-wide ham radio community. They say give us your input and we will listen.

According to the Hamvention website, those in charge of next years gathering have implemented what they call a new "open door policy.” In other words, they want to hear your suggestions or comments on how to improve their show. They also promise to consider your ideas, discuss them, and implement them if possible.

If you want to help make Hamvention even bigger and better, now’s your chance. Sit down at your keyboard and write the 2004 Hamvention team directly at w-mail to info@hamvention.org. And yes, they promise a personal response to every e-note that’s received. (Hamvention)

**

CONVENTIONS AND HAMFESTS: DENVER COLORADO IN OCTOBER

Still with hamfets and conventions, the Rocky Mountain Radio League welcomes everyone to the 2003 R-M-R-L Hamfest slated for October 18th at the Jefferson County Fairgrounds in Golden Colorado. For more information e-mail Ron Rose to N0MQJ@rose3.com. (Press release)

**

CONVENTIONS AND HAMFESTS: SOCORRO N.M. ON OCT 25

Also, mark down Saturday October 25th for New Mexico’s Socorro Hamfest. Socorro is about 80 miles South of Albuquerque. This year the venue is the Firefighters Training Academy with R-V parking available. For information by e-mail please write to ac5bx@arrl.net. (e-mail)

**

WITH THE SCOUTS: A SPECIAL ON JOTA

Last reporter Mark Abramovich, NT3V, told you that the 46th annual Boy Scouts of America Jamboree on the Air will take place on October 18th and 19th. Now Mark has prepared a special report that details the Jamboree on the Air and the very unique relationship between scouting and ham radio.

--
AUDIO HERE
--

Mark’s report is our September Newsline Extra. It can be downloaded as an M P 3 file from our website at www.arnewsline.org/quincy. Just scroll down to the bottom of the page, click on ARNewsline Extra, turn your speakers up and enjoy. (ARNewsline(tm))

**

PROMOTING HAM RADIO: JOTA VIDEO NEEDED

Are if you are planning to take part in this years scouting Jamboree on the Air and own a good quality home video camera, your help is needed. As you know, Dave Bell W6AQ, Alan Kaul W6RCL and Bill Pasternak, WA6ITF, are always looking for good video of ham radio happenings that they might be able to incorporate into a presentation about the hobby. As scouting and ham radio enjoy a very unique relationship, this is an event that is sure to make it into one of their shows, but only if they have the pictures and sound.

Since the Jamboree on the Air happens only once a year, that’s where you come in. What’s needed are volunteer camera people to take their gear to where the scouts are holding their JOTA gatherings and videotape them in action. Pictures and sound of them setting up their JOTA campsites, ham stations and their on-the-air operations. Also wanted is video of licensed scout hams introducing non-ham scouts to our very special new world of Amateur Radio.

If you can help in this project, or want more information, e-mail the production team to hamvideo@juno.com. (The Producers)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: DANNY WEIL, EX-VP2VP - S.K.

The changing of the guard in ham radio continues. This with word from the San Antonio Radio Club that Danny Weil, the former VP2VP, has passed away October 3rd at age 86.

Weil is best known for his post World War 2 DX operations. During the 1950's and 1960's Weil took to the ham radio airwaves from numerous exotic locations that he sailed to in a boat named the YASME.

Born in the UK in 1918, Weil had been living in a managed care facility in Texas since suffering a stroke in 2001. But during his lifetime his voyages lead to the setting up ham radio stations on remote islands around the world and contacts with over 100,000 amateur radio enthusiasts. His exploits are credited with giving birth to the terms D-X'er and D-Xpedition.

Weil's adventures and those of the Colvin's -- Lloyd W6KG-and Iris W6QL -- lead to the formation of the famed YASME Foundation that assists DX operations world wide. Services for Weil were held in San Antonio Texas on Wednesday, October 8th.

More about the life and death of Danny Weil is on-liner at
http://obit.porterloring.com/obit_display.cgi?id=82269&clientid=porterloring
(San Antonio Radio Club, Paul Guido)

**

RADIO TRAGEDY: HAM KILLED TRYING TO ACTIVATE DX STATION

A ham radio operator has died while trying to put a rare location on the air. RSGB News Reader Jeramy Boot, G4NJH, has the tragic details:

--

We are sad to have to report the death of Richard Baker, M3RWB, who died as the result of injuries sustained while climbing Aran Fawddwy in North Wales. He was intending to activate the summit for the Summits on the Air, or SOTA, award programme.

The Summits on the Air management team has released a statement which says, "Richard was an experienced hillwalker who saw SOTA as a good opportunity to re-ascend many summits that he had climbed in the past. His death is an untimely reminder that while accidents can happen anywhere, the mountains can present special dangers to those who are experienced as well as those new to mountain travel."

Jeramy Boot, G4NJH

--

The Summits on the Air management team went on to stress that in all cases, the safety of those travelling must come above the desire to ascend to the mountain. (GB2RSO)

**

RADIO RECORDS: US TO CZECH REPUBLIC ON 24 GHZ

Shooting for the moon has provided two hams the first-ever United States to Czech Republic E-M-E contact on 24-Ghz. The ARRL Letter reports that Amateur Radio moonbounce and microwave history was made September 24 at 1400 U-T-C when Josef Sveceny, OK1UWA, and Al Ward, W5LUA, completed the 24-GHz EME QSO between the two nations.

Sveceny used a 3-meter Prime Focus dish with 35 watts at the feed, vertically polarized. Ward's station also utilized a 3-meter Prime Focus dish with but with 70 Watts at the feed. Ward was horizontally polarized to account for the spatial offset between North America and Europe. Previous international 24 GHz EME QSO's have taken place between the US and Canada, the US and Russia and Canada and Russia. (ARRL)

**

INTERNATIONAL - INDIA: ECHOLINK COMES TO VU

News out of India is that a new EchoLink VHF Repeater has been installed at the Indian National Institute of Amateur Radio. The new system allows local hams in Hyderabad to contact Amateur stations all over the world twenty-four hours a day. According to Jose Jacob, VU2JOS of the National Institute of Amateur Radio, this is the second such repeater to go into service in India. (GB2RS)

**

INTERNATIONAL - UK: RAYNET AT 50

The Radio Society of Great Britain is hosting RAYNET's 50th Annniversary Emergency Communications Convention in Birmingham, England on Saturday the 25th of October. RAYNET is the U-K equivlant to our RACES an d ARES combined. Paul Gaskell, G4MWO, tells Newsline that in addition to the convention, a special event station will be taking to the airwaves as GB50RAEN. It will be on the air from October 20th till the 31st. QSL's go via RSGB Bureau. Further information is in cyberspace at www.rsgb.org/emergency (GB2RS)

**

ON THE AIR

On the air, HE2GR is a special event call for the USKA club station HB9GR. It's on the air to celebrate the 200th anniversary of the Swiss Cantons of St Gallen and Graubuenden. HE2GR will be active on CW, SSB and digital modes until the 30th of December. QSL as directed on the air. (VHF Reflector)

**

DX

In DX, ZL3CW will be active as ZM8CW from Raoul Island in the Kermadecs through the 18th of October. Jack says that he will be there doing maintenance work for the Department of Conservation and hopes to be active in his spare time. This is actually not a DXpedition, but ZL3CW is considered to be one of the better Morse operators and enjoys the challenge of the pile-ups. (Modern DX'er)

And a D-Xpadition to Annobon Island was forced to shut down prematurely. This after authorities ordered operations curtailed on October 4th local time. According to the various D-X remailers, no reason was given for ordering the 3CZ0V ham radio operation off the air. (Via Internet)

**

THAT FINAL ITEM: HAM RADIO AT THE NYC MARATHON

For this weeks final story we turn the ham radio sports page and one of the biggest events of the year thats about to take place. And its Amateur Radio that makes it happen. We have the details in this report:

--

If you want to see a shining example of how valuable amateur radio can be as a public service, look no further than New York City the first week in November. Providing communications for the marathon is no small job. Just ask Communications Director Steve Mendelsohn, W2ML. When the marathon was run back in 1976, 26 hams provided communications assistance. This year, 425 hams will help, and they'll do it using 9 repeaters on 2 meters and 440. Mendelson says it's a source of pride for the ham volunteers who come from across the country:
--
Mendelsohn: "Just like Disney's fantasy land, once you hav e been there you want to come back over, over and over again."
--

The marathon isn't just for New York area hams. Mendelsohn says amateur radio operators show up from more than half a dozen states to help:

--
Mendelsohn: “We have people coming back from Colorado, coming back from Vermont, from florida. They come in from all over. Seven states, twenty-six miles, no waiting.”
--

New York's boroughs will be flooded with over 30-thousand runners this year. The hams helping will be part of more than 9-thousand people volunteering. How you manage that many people could be a massive challenge -- but Mendelsohn says race organizers figured out how to do it:

--
Mendelsohn: “You break the nets up into sizable chunks. You name a Mile Captain for each of the miles, and the Mile Captain manages a staff of anywhere from 3 to 15 people. Oncve you get further along in the race where there is more of a chance of the runners falling and dropping out because thery are tired, you increase your manpower.”
--

18 net controllers with 2 standby operators will be on duty. Communications start at 3 a.m. race day and go until 6 o'clock that evening. 35 hams will be on hand at the starting line alone. Once the race is done, Mendelsohn says the hams' work doesn't end. For this many runners and their family members to reunite takes up an area of more than five blocks.

Hams help there, too. And they'll tag along not just with race organizers, but with translators who will need amateur radio operators by their side, too. It's a huge undertaking that takes a lot of planning and makes for a very long day. But the hams helping out with New York City's marathon wouldn't trade it, because Mendelsohn says, it's just plain fun.

From Birmingham Alabama, I’m David Black, KB4KCH, for the Amateur Radio Newsline.

--

For those of you in North America who might want to grab a glimpse of ham radio in action, NBC Sports will broadcast a one hour New York City Marathon highlights show nationwide beginning at 2:00 p.m. EST on November 2nd. Check your local listings for details.

Also, the full interview with Steve Mendelsohn, W2ML, can be heard on this weeks RAIN Report. Its as close as your telephone at 847-827-7246 or on-line at www.rainreport.com. You can find more information on the race in cyberspace at www.ingnycmarathon.org. (ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Jim Meachen, ZL2BHF, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2003. All rights reserved.

> FWIW: The cost to subscribe to CQ Magazine for one year through the CQ
> Magazine buggy website is $31.95. The cost to subscribe to CQ Magazine for
> one year through Amazon.com is $27.95.

Verify that with CQ before you subscribe. Amazon.com has third-party merchants on their system as well as stuff you buy direct from

Amazon.com themselves. If you search for a book, for example, you will
see Amazon.com's listing, plus the listings from others who are offering
the book new or used. CQ had a notice on their web site that some
people were selling "discounted subscriptions" through eBay that were
completely bogus, just ripping off the unsuspecting public. It might be
that they've been driven off eBay but have found greener pastures
(temporarily) at Amazon.com...!

That "Stealth Amateur Radio" book (mentioned in another reply) is a good one, well worth adding to your library.

I'm in a condo association, with a restriction in the CC&Rs that says no antenna can exceed a height of eight feet above the tallest point of the structure. They also recommend a chimney mount (mast strapped to chimney with metal straps) but do not exclude others.

Point: READ your CC&Rs carefully before doing anything else. You may find that (1) you have no problem at all and can do what you thought you couldn't; (2) you have some latitude but not carte blanche; or (3) you can't do squat and have to either move or get really sneaky.

In my case, I've got a G5RV (the shorty version, only down to 40 meters) strung up over the patio. It's not above the roof line and not an eyesore (hard to see unless you look for it) and I run QRP so nobody gripes. Soon as I can get up there to put up the chimney mount and mast, I'll be moving the antenna up there, plus adding a discone for my scanning and VHF/UHF operating. Someday perhaps a 2m beam will go up but that's way down the road.

says...
> Just been assigned some new bands, and groups are already trying to hog them
> up.

More like trying to stimulate activity on the new bands by giving people a reason to go there. The "calling frequency" for the HFPack group is simply a way of saying that, if you're operating pedestrian portable and would like to work others of a similar bent, this is the frequency to listen to for calls. Nobody's trying to "hog" anything.

> if I can find a receiver capable of those freq's. Again, thanks for the info.

There's also VLF (which is WAY down the dial), used primarily by the US Navy for communication with submarines. They operate from some HUGE stations in the continental US, plus their TACAMO aircraft (C-130s with long wire antennas strung out the back during flight). VLF signals will penetrate the water to a certain depth. They use extremely slow CW (dots lasting several seconds and dashes lasting a couple of minutes!) signals that basically send the call sign of the submarine being called. When the sub gets the call, it's usually just an instruction for them to come up to periscope depth, put up the antenna mast and query the satellite for a burst transmission of updated orders, occasional health-and-welfare traffic for the crew, etc.

Presumably, this system is also used to send launch orders for the Ohio-class ballistic missile submarines, but that's highly classified and all I see about that is what comes across in Clancy novels and the movies. You'll have to ask a boomer crewman for the details, but good luck -- they don't call it the "Silent Service" for nothing!

> > Hi Jon,   your question is o.t.
>
> Really? Hmmm, I couldn't find a specific FAQ for this group. Can you suggest
> a better group?

Actually, the groups that would be the best for you are:

alt.radio.international
alt.radio.pirate
rec.radio.shortwave
alt.pirate.radio
rec.radio.misc

This one (rec.radio.amateur) is specific to amateur radio, and has little to do with pirate broadcasting.

In answer to your question, though: anything that is going to receive shortwave broadcasts will also do well to receive shortwave PIRATE broadcasts. So the 7600 will probably do well enough.

If you want to discuss it further, let me know either by email or a posting in one of the above groups, and we'll pursue it there rather than risk further off-topic postings here. Thanks.

Good point. Starting out with a straight key is always the best course of action. Mastering that is a fundamental skill for the CW operator. THEN one can move up to paddles and a keyer. Straight key sending is a basic skill of which all hams should at least have a bit of working knowledge.

And the ARRL even sponsors an event annually just to get people to dust off their old straight keys -- it's called New Years' Day for the rest of the world, but known in the amateur radio community as Straight Key Night.

"Spurious Noise" has failed to live up to his name -- he's posted some excellent content to you about keyers and paddles, well worth archiving for future reference.

As for Bencher paddles: they are what I use, and I have had mine for some time. I have the basic one, black base with chrome mechanics and plastic paddle ends. The base is nice and heavy with good rubber feet, sits steady and doesn't scoot around the desktop as it's used. Leading name in the field, you could do a lot worse.

73 lost me as a subscriber several years ago. I haven't even bought one off the rack at Ham Radio Outlet in two years, and even then it was only for one article that I wanted to read and not for anything that Wayne Green wrote.

Sorry to see it pass, but then again it's not hard to see something like that coming....

I hadn't seen a copy in ... probably close to 20 years. I didn't even
know it was still in existence.  I thought it fell by the wayside
around the time of "Ham Radio", which was a great magazine.

> know it was still in existence. I thought it fell by the wayside
> around the time of "Ham Radio", which was a great magazine.

HR was indeed a great magazine. You can still get archive CD-ROMs of the magazine from CQ Publications, I think.

73 did indeed degenerate in recent years. The magazine got progressively thinner -- less content, and of course less advertising -- and what content that DID remain was more of Wayne's editorializing.

What remains in the radio realm, publication-wise, is a pretty good balance:

- QST has a good amount of technical information, plus some coverage of the operating aspect of the hobby;
- CQ covers more operating and less technical;
- WorldRadio covers the niche aspects of amateur radio, such as MARS, operating modes, search and rescue, 10-10 -- plus a lot of the "human interest" features that they carry;
- Monitoring Times and Popular Communications, the two magazines that cater more to the monitoring side of the radio hobby (scanning, shortwave listening, etc.), cover those areas very well.

Naturally, I get all five of these magazines. Between all that and the computer magazines and stamp collecting publications I get, the postman is considering charging me extra to fund his Ben Gay habit for all the muscles he's pulled in hauling all that stuff to my mailbox...! ;-)

73 Lost me at least 15 years ago - although I don't recall the exact date.

My basic premise is that when people shriek their opinions and ridicule others while doing it, that this is someone I won't support with my money. The same holds true for most who are self-proclaimed-supreme-fonts-of-all-wisdom.

It's too bad that it took as long for it to die as it did. While I hate to see more evidence of ham radio slipping away, I rejoice that to some extent, Wayne Green's mouth has finally been shut.

Good riddance, Wayne. Maybe in your next lifetime you'll learn to work and play well with others.

Charlie

What happened to the covers? Without covers, these radios are reduced to the status of parts rigs. What about microphones and manuals and mobile brackets?

I have an IC-751 I like but I wonder what you mean by the back cover.

Perhaps you can guess at a price for everything and I might take it all, in hopes of fixing up some of the stuff to get my money back and then having the rest gratis.

Let me know.

73, Bob K6DDX

Wayne has always been a "rebel" from way back to the beginning of RTTY vs the FCC. Along with some of the pioneers of RTTY, Boyd Phelps, W0BP, Byron Kretzman, W2JTP, Merrill Swan, W6AEE and a few others. Those amateurs convinced the FCC to allow FSK keying instead of "make and break keying". Wayne got his writing start with CQ magazine as W2NSD's "Amateur Teletype" bi monthly column or before with a small RTTY newsletter in Cleveland, OH? Then on to assistant editor or editor of CQ magazine before breaking away and the creation of 73 magazine.

In 73's heyday the magazine was twice as thick as QST, with just about every ham related company or store advertising in the magazine. Some of the articles and columns were very informative. The "April fools" issue was really a great innovation for it's time. The one I remember the most was the burial of a dipole underground and the signal therefore would be "inverted" on the transmit end and one also needed a buried dipole to receive the "inverted" wave.

He exposed a ham store in the suburbs of Chicago called "Trigger Electronics" The store advertised the purchase of your "used gear", When the received check bounced at the banks from Trigger then hams wrote to Wayne and he personally looked into the store and it's business practices. Put "Trigger" out of business by exposure in 73 magazine editorials.

The magazine promoted two meter FM repeaters, maybe even lobbying for the hams before the FCC to relax the rules some for repeater operation?

I was behind Wayne at a Hamfest in the coffee and doughnut line where he was the featured speaker, he mumbled something about the price of the doughnuts and that they were to small for the price, but he took one anyway.

I heard in the later years that Wayne required a certain format for articles or columns and if the author did not follow the format, then the article or column did not get published.

Think a lot of the advertisers were leery of Wayne when he attacked the ARRL so often in the editorials and they dropped out in fear of QST removal of their advertisements in that magazine.

Somewhere along the way, Wayne got off on the wrong tangent and
destroyed a good technical magazine.

So not all is bad about W2NSD, he has contributed to the amateur radio
in ways that are behind the scenes.

Thanks Wayne for the "good years" when 73 was great.

JJJHS

i dont know what happened to the cover(s). i believe there was a cover
on the
back portion encasing the xformer near the heat sinks. no mic or manuals.
500 a fair price? the kenwood 2 meter rig, 100. 20 amp p/s, 75. yaesu
swr/watt meter, 20. who knows what the national nc-33 rcvr would bring.
i believe he has a hr 2510 chassis as well as a collins xmitter (but i
dont know the model). i would have to go back and search around.
everything else, you tell me a price. i'm not a ticket holder so this
equipment is not my forte'.
the tubes are generating the most interest from rcvd emails.
again i am doing this as a favor for an amateurs widow.
i pay shipping. bank/certified check accepted.
73, jim.

How do I change my FT23R to tune in 5kHz/10kHz steps as opposed to 12.5kHz/25kHz ?

I asked Yaesu and they replied:
> On the FT-23 there were 5 versions .Ver A,D and E have the 5 and 10 kHz steps .The ver B and C have the 12.5 and 25 kHz > steps. The steps are most of the time able to be changed with jumper settings. I don't know what the jumper setting are for either > the USA ver or EUR ver.I don't have a radio in house to open up to take a look at.

I opened up my unit and the following pad configuration was noted:
3 Open
5 Open
6 Open
7 Open
8 Open
9 Closed
10 Open

Pads 7, 8, 9 change the frequency range and whether the radio operates in commercial (readout in channels) or amateur mode (readout in MHz). I have searched the Internet and found hundreds of frequency *range* mods but could not find any frequency *step* modifications.

Can anyone provide the jumper setting or other information (perhaps someone with a 5/10kHz ft23r could look into their unit and report their jumper settings)?

That tracks with me, too. Since that time I occasionally picked up issues off the rack at HRO Anaheim if they had an interesting cover story, but otherwise no.

> My basic premise is that when people shriek their opinions and ridicule others while doing it, that this is someone I won't support with my money. The same holds true for most who are self-proclaimed-supreme-fonts-of-all-wisdom.

That's why I rarely contribute to political campaigns.... ;-)

Bob,
Jezzzz, give the guy a break. He just lost his friend and your bitching about a covers, mic and manuals.
Maybe Jim will come over and install them for you also.
Offer the guy's family $5.00 bucks. You just want the stuff for nothing.
I see it time and time again. Slime like you hang around waiting for a ham to pass on
and then you want the equipment for practicly nothing. Then you sell off the stuff for a profit.
You make me sick.

And Jim, Sorry about your friend. You should take some digital pics of the equipment and put the stuff on Ebay. There you will get the most money for the family.

73 and good luck!!

I just picked up an unidentified Unadilla balun; label seems to have worn off.

It is about 6" long (round, inline) with SO239 connectors on each end.
White body with black end pieces. There is a Unadilla label with a capital
"Y" in a small square.

I *think* this is a 1:1 HF beam balun... Any ideas??

sorry for the dumb question.  About the receiver, does the entire thing
need work, or just the power cord?  If so, how much?

I'm interested in purchasing assuming it's nothing too big, that is
unless you're already listed everything on ebay.

Does anyone know of any good DX clusters that I can receive via email? I'd
prefer one that I can configure to only send reports of activity on certian
modes and bands, as well as the ability to set it only to notify me during
certian hours each day. Anyone know a DX cluster that fits that bill?

Hello,

Anyone know how to install a yk88cn filter in a ts-530.
I don't have a book.

thanks & 73's
Ken
KD5ZCL

Amateur Radio Newsline™ Report 1366 October 17 2003

Amateur Radio Newsline report number 1366 with a release date of Friday, October 17th 2003 to follow in 5-4-3-2-1.

The following is a QST. A chance for pro-code to speak out to the FCC and a warning to firefighting officials about the hazard of BPL. Find out the details on Amateur Radio Newsline report number 1366 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: MORSE CODE AND THE FCC - ROUND II

Well we told you it was going to happen and it has. We are talking about the next round of rule making requests to the FCC on the topic of what to do about Morse code testing. Most of this group want to keep some form of CW test. Amateur Radio Newsline's Bruce Tennant, K6PZW, takes a look at what the FCC wants you to read and comment on:

--

If you were not happy with the first round of Morse code rule making requests, maybe you will find something more to your liking in this latest batch of seven that the FCC has released for public comment.

We have already covered the most prominent of them. That being the one from FISTS -- the international Morse code preservation society. FISTS wants the code retained and all aspects of the ham radio exam process made allot tougher. And in this area, FISTS is not alone.

In is petition, Frank Napurano, K2OKA, calls Morse the purest, most accurate, efficient, reliable and economical form of radio communications ever devised. He tells the FCC that its essential to keep at least the current 5 word per minute CW test in the interest of public safety, the preservation of a radio art and as a tribute of support for a prized and respected avocation.

Also in favor of keeping some form of Morse exam is the Puerto Rico Amateur Radio League. While it wants the FCC to do away with the current 5 word per minute test for General class it says to keep it for those going for an Extra ticket.

James Roux, W4YA, wants the FCC to eliminate the 5 word per minute code test for a General class license, but like the Puerto Rico Amateur Radio League would require Extra class applicants prove they can do Morse at 15 words per minute. Roux also wants to cut the number of licenses to only two. Under his proposal nobody would loose current privileges but only the General and Extra class would continue to be issued.

Meantime, Robert Rightsell, AE4FA and Harry Kholer, NZ0PU also want 5 word per minute Morse testing continued but would institute a points score system for passing a ham radio exam. Under the Rightsell / Kholer plan, an applicant could earn up to 24 points on Morse testing.

And Joseph Speroni, AH0A, has a novel idea. Only test hams in Morse who want to use the mode. Speroni would have the FCC delete the CW exam for those who want to operate only phone. If a ham wants to operate High Frequency Morse, Speroni says they should pass the current 5 word per minute exam.

Last but by no means least comes Charles Young Jr, AG4YO. He is asking the FCC to delete the 5 word per minute Morse exam for the Technician Plus license, but keep it as a requirement for General and Amateur Extra exams. And like the other petitioners, Young has some specific ideas regarding other aspects of ham radio licensing as well.

These seven petitions have been designated as RM 10805 through 10811. Commentary cutoff on all of them is Friday, November 7th.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

You can comment on one or all of these rule making petitions by taking your browser to the FCC Electronic Comment Filing System. Its in cyberspace at www.fcc.gov/cgb/ecfs. (ARNewsline™ from FCC website)

**

RESTRUCTURING: QRZ SAYS KEEP THE DISCUSSION ON TRACK

In a related story, the operators of the QRZ.com website have drawn a proverbial line in the sand. They say that any attempts to take a Forum discussion that is not directly related to the code versus no code debate and turn it into such will result in those posting being removed. The operators of the website say that this is not a stance by QRZ.com either for or against Morse code. Rather it is a their way to keep a given subject being discussed on track. The QRZed website is in cyberspace at www.qrz.com. (QRZ)

**

RESTRUCTURING: PNG GOES CODE-FREE

I'm Don Wilbanks, AE5DW, with breaking news out of the South Pacific. Dateline Papua New Guinea where that nations Telecommunications Administration, PANGTEL, has declared Papua New Guinea to be the latest nation to become code free. This as it orders the deletion of Morse Code from the qualifications necessary for its amateurs to have access to the High Frequency bands.

According to Rick Warnett, P29KFS, the decision to drop Morse was actually made back on June 10 th but not widely publicized until now. June 10 th was before the 2003 World Radiocommunications Conference that decided Morse testing was no longer mandatory world wide and retaining it would be the decision of each individual administration.

Warnett, who is the IARU representative for the Papua New Guinea Amateur Radio Society says that the official announcement will take place within the next few days. When it comes, Warnett says that some 30 to 40 new Papua New Guinea full call hams will have international communication available to them. (Q-News)

**

DX PROBLEMS: A FOLLOW-UP ON ANNOBON ISLAND - 3C0V

A little more information has surfaced on why a long awaited Dxpedition suddenly left the air. Jeramy Boot, G4NJH, has the details:

--

The Spanish and German group that had been operating as 3C0V from Annobon Island off the West Coast of Africa were forced to close down early in the morning of last Saturday, the 4th of October. The DXpedition was scheduled to have continued until the 10th of October.

Gabriel 'Gaby' Mardiros, OD5NJ, the 'pilot' for the 3C0V DXpedition, says that the group is "fine" but that they had received "a serious warning not to use any of their radios". The reason for the enforced closure was not yet known."

--

Some reports indicated that local authorities had given the DXpeditioners less than 24 hours to pack up and get off the island. More on this story as information is made available. (GB2RS)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including Peoria Amateur Radio Club net serving Peoria Illinois.

(5 sec pause here)

**

WRTC: 2006 GAMES IN BRAZIL

It has been announced that the next World Radiosport Team Championship, or 'WRTC', will be held in Brazil in 2006. The last WRTC event took place in Finland in July last year.

WRTC brings together the top HF contesters from all over the world to compete on - as far as is possible - a 'level playing field'. WRTC 2006 will take place in Florianopolis, capital of Santa Catarina State in southern Brazil. The event is open to everyone: competitors and spectators alike.

I'm Jeramy Boot, G4NJH, in Nottingham. (GB2RS)

**

RADIO RULES: WORLD'S BROADCASTERS JOIN ANTI-BPL CHORUS

A subcommittee of an International Telecommunication Union panel of technical experts responsible for terrestrial broadcasting issues has joined a growing chorus of concerned parties about the interference potential of power line telecommunication. According to the ARRL Letter, ITU Radiocommunication Sector Sub Working Group 6E1 has been looking at BPL. Now it has expressed the view that interference produced by systems employing powerline data transmission as well as by Industrial, Scientific and Medical equipment and short-range devices, will compromise broadcast reception. (ARRL, CGC)

**

RESCUE RADIO: BPL VS. FIRE RADIO COMMUNICATIONS

Meantime, hams who are also firefighters or have access to the local fire Department should consider enlisting their help in fighting the rollout of Broadband over Powerlines. This, due to the heavy use of the 33 and 45 MHz radio bands by fire departments.

Writing to the QRZ.com super site, Jim Walsh, K3JIM, says that some fire departments are not technically savvy and think that interference is really blind spots in the radio coverage. Walsh, who is a firefighter and truck engineer Red Lion, Pennsylvania, says that broadband interference is not easily recognizable to fire personnel as say an interfering DX station may be to the trained ear of a ham radio operator. He says that the fire service is used to dead spots and may not know why they exist.

Walsh cites one situation in the area where he lives and works. He says that it is well known that when in the vicinity of certain gas station convenience stores in his area that one cannot use the radio for a few hundred meters. He says that in this case the problem is the Point of Sale system that records the gas transactions and that the lines running to the pumps are not shielded and radiate computer hash like an antenna.

K3JIM has lots more to say about the problem BPL can be to low-band fire radio systems. You can read it all on line at www.qrz.com
(K3JIM via qrz.com)

**

ENFORCEMENT: YOU ARE NOT SUPPOSED TO OPERATE THERE

In regulatory news, two hams have been asked to explain why they have been heard operating on law enforcement frequencies. The FC's Daryl Duckworth, NN0W, has more:

--

Duckworth: "Tom Christman, KB2NAV, of Albany New York, has received an inquirey as to operations on the Albany County Sheriff's Department emergency frequencies without legitimate purpose last December.

Along similar lines, Joseph Hutchins, KG4SXD, of Swannanoa, North Carolina, is being asked about operations on police frequencies in

February of this year. That of the Black Mountain Police Department in Black Mountain North Carolina."

--

Both hams were given 20 days to respond to the FCC's query. If the agency finds that rules have been violated, each ham could face a fine of $7,500 to $10,000, license suspension and revocation.

**

ENFORCEMENT: AMATEUR TOLD TO KEEP HAM GEAR OFF CB

The FCC has written to James Perryman, KC8KOU, of Toledo Ohio. This, regarding continued complaints involving his alleged operation of non type accepted radio gear on the 11 meter band. Again, the FCC's Daryl Duckworth, NN0W:

--

Duckworth: "The letter went on to say that the operation of non-certified equipment on CB frequencies, such as Amateur equipment and linear amplifiers will result in a monetary forfeiture in the $7500 to $10,000 area, as well as the in-reim seizure of all non-certified equipment in cooperation with the United States Attorney in his jurisdiction."

--

The FCC also told Perryman that his station is subject to inspection at any time by Commission personnel.

**

ENFORCEMENT: YOU CANNOT SAY THAT ON THE RADIO

Meantime, Federal regulators have announced plans to fine a Detroit radio station $27,500. This, for an allegedly indecent broadcast on a popular afterboon show back in January of 2002.

In a Notice of Apparent Liability to Monetary Forfeiture, the FCC said a broadcast on Infinity Broadcasting's WKRK-FM included explicit and graphic sexual and excretory references during separate discussions with nine separate people. Such language is banned under FCC rules.

Infinity was given 30 days to contest the notice. In earlier filings with the FCC, the company argued that no penalty could be assessed. This is because Infinity believes that the FCC's definition of indecency is unconstitutional.

**

ENFORCEMENT: LA REPEATER OWNERS ORGANIZE AGAINST ALLEGED UNLICENSED OPERATOR

Repeater owner operators in the Los Angeles Californias area are taking action to keep transmissions allegedly coming from Jack Gerritsen, the former KG6IRO, from being retransmitted. In are rare show of cooperation, system owners and their control operators are taking repeaters off of the air rather than permit the signals from a station identifying with the call sign KG6IRO call sign from being rebroadcast.

If the name Jack Gerritsen sounds familiar its because we have reported on hin several times before. Gerritsen was licensed for a very brief period back in 2001. His ham ticket was set aside by the FCC's Wireless Telecommunications Bureau after the agency learned that Gerritsen had been convicted in 2000 on charges of interfering with Los Angeles Police Department radio transmissions. Gerritsen recieved a jail term for the interference conviction. He was paroled but sent back to prison after allegations surfaced that he had been operating a radio transmitter without a license. He was released before serving his full sentence as the result of a Federal court order dealing with overcrowding in California state prisons. His application for a ham radio license remains in the FCC's pending file and a hearing on the matter will be scheduled at some future date.

Be that as it may, Los Angeles area repeater owners are not waiting for the FCC to move in the matter. They have taken matters into their own hands and are acting to keep the signal claiming to be KG6IRO from being repeated. (ARNewsline™)

**

HAM RADIO BUSINESS: 73 MAGAZINE FOLDS

73 Magazine is the latest casulty in the weak world-wide ham radio business economy. On Monday, October 6th, founder Wayne Green, W2NSD, e-mail several friends to tell them that 73 Magazine has ceased publication after completing 43 years.

The reason for 73 going away? Green claims that the hobby is slowly dying as a result of a lack of new hams. In turn the the industry that supports Amateur Radio is fading away as well. Green says that without sufficient advertising the magazine couldn't continue.

--

Green: "The book sales have kept 73 going for the last few years, but book sales have dwindeled way, way down and there was no way to keep 73 going. The ad sales are down and the reciepts from the ad sales are down even weorse than the ads."

--

W2NSD says that it was an interesting 43 years and that he hopes to write about it some time. In the meantime he plans to continuing his essays on his website for those subscribers who mainly bought the magazine to read them. Thats in cyberspace at www.waynegreen.com.

No word what will happen to those with outstanding subscriptions to 73, especially hams who bought lifetime subs at a bargain price when the magazine first started up. Green always said it would last through his lifetime or that of the purchaser, but it looks as if W2NSD and a number of lifetime subscribers may have outlived 73. We expected it of Green. His phonetics are W-2-Never-Say-Die.

You can hear W2NSD talk about the demise of 73 on this weeks RAIN Report. Its available on-line at www dot rainreport dot com or by telephone at 847-827-7246. (ARNewsline™)

**

HAM RADIO BUSINESS: NEW KIDS HAM RADIO MAGAZINE TO BE PUBLISHED

If the ham business is as bad as Wayne Green says, you would not know it by Larry Mahlberg AA0BY. As 73 sails into the sunset, Mahlberg has announced his own new ham radio magazine targeting the younger generation.

According to Mahlberg, he and his crew are putting together a brand new monthly publication called "Hamtastic Kids" that will debuet on November 15th and be available by subscription. To get it started, AA0BY is asking your help by submitting material for publicatoon such as Amateur Radfio poems, stories, puzzles and even ham radio recipes. He is also looking for articles written by kids on such topics as Morse code, DX'ing, ragchewing, fox hunting, contesting and hamfests.

But thats not all. The Hamtastic Kids is offering a free years subscription for best logo that a youngster submits for use in the Magazine. Submissions of logos, articles and information requests go to Hamtastic Kids, in care of Larry Mahlberg, AA0BY, P.O Box 1634 Eugene, Oregon, 97440 (W8HDU)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RESCUE RADIO: APRS JOINS THE CHARLES REGATTA

Almost two decades after it was developed by an Amateur Radio operator, Automatic Position Reporting System equipment is being used for the first time by the hams on board the rescue launches at the Head of the Charles Regatta. Amateur Radio Newsline's Norm Seeley, KI7UP, reports:

--
Bob Bruninga, WB4APR, is considered the father of the Automatic

Position Reporting System thats known in ham radio circles by the acronym of four letters APRS. And from October 17th through the 19th a team of up to 30 operators will be on the air using it and other modes to operate a safety communications net for the annual Head of the Charles Regatta.

According to Bruce Pigott, KC1US, the addition of APRS is very significant because it allows automatic tracking of a ham radio station by sending Global Positioning Satellite information along with the voice or other data on the radio signal. This should permit precise dispatch of land and river emergency units to rendezvous with the launches.

KC1US says that communications coverage begins three hours before the first race on Saturday and an hour before the first race on Sunday. This, will allow medical and public safety communications coverage of practice runs and gathering crowds of spectators.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

This year's communications support covers all aspects of the regatta. This includes preparations, practice and competition for all three days of the event. (KC1US)

**

HAM RADIO CONFERENCES: SVHFS IN GEORGIA IN 2004

The 8th Annual Southeastern VHF Society Conference will be held in Georgia on April 23 and 24, 2004. This, at the Holiday Inn Hotel & Suites in Marietta on the outskirts of Atlanta. More information will be posted the Society webpage. The u-r-l is www.svhfs.org. Qustions go by e-mail to rover@wireco.netb (SEVHFS)

**

HAM RADIO IN SPACE: VU-SAT LAUNCH DELAYED

Turning to ham radio in space, the expected launch of India's VU-Sat has been delayed indefinitely. The AMSAT News Service quoting a release from the launch agency says that during the thermo vacuum test deviations in the performance of the ham radio payload were. Because of the need to correct these abnormalities, the launch will take place at some later date. VU-Sat was to be a passenger with a remote sensing satellite being orbited onboard from Sriharikota launch range later this month. (AMSAT)

**

HAM RADIO IN SPACE: HAPPY BIRTHDAY AO-40

AMSAT is sponsoring an AO40 Birthday Bash to celebrate the satellites 3rd Birthday. The party continues through November 17th. Email Bruce Paige, KK5DO, for more details. His e-mail address kk5do@amsat.org (AMSAT)

**

INTERNATIONAL - GERMANY: DL3KWF RESIGNS AS DARC VP

On the international scene, word from Germany that Hardy Zenker, DL3KWF has resigned from his post as Deutscher Amateur Radio Club vice president He has been replaced by Ingobert Dittrich, DK9MD, who was elected to the post. Dittrich is well known as a former representative of the broadcasters to numerous committees across Europe. The Deutscher Amateur Radio Club which is Germany's natioonal ham radio society holds elections every two years. (DARC)

**

INTERNATIONAL - HOLLAND: ARTIFICIAL BROADCAST ISLAND TO DISAPPEAR

A significant piece of Dutch broadcasting history may soon cease to exist. Media Network reports that the Hollands Department of Public Works has announced its decision to dismantle the artificial platform in the North Sea known as R-E-M Island. The island was constructed in 1964 at a cost of 9 million guilders by a team of entrepreneurs who used it to broadcast radio and television programs to the Netherlands under the name Radio Noordzee and TV Noordzee.
The full story is on-line at
http://www.rnw.nl/realradio/features/html/rem031009.html (Media Network)

**

INTERNATIONAL - BRAZIL: CELEBRATING SCOUTING ON THE AIR

And Brazillian club station PY3ARD is on the air as ZW90S for the renmainder 2003. This, to celebrate the 90th anniversary of the Gerge Black Scout Group which happens to be the oldest Scout Group in Brazil. According to the RSGB, the ZW90S call will be aired for the first time during the upcoming CQ World Wide contest. If you work it, QSL via PY3ARD. (G2RS)

**

ON THE AIR: W6AQ AND K6IPV TO RAROTONGA OCT. 21

Hollywood producer Dave Bell, W6AQ and his close friend Don Lisle, K6IPV are headed to Rarotomga. This for a combined mini-D-Xpedition and contest operation. The pair will arrive on the island at about 9:00 PM local time on October 20th. They hope to be on the air by the afternoon of the 21st operating mostly SSB with some CW and possibly RTTY and PSK-31.:

--

Bell: "They will hear us calling CQ on whatever the highest frequency where there is propagation which is going to be during the daytime perhapps 10 meters; 15 meters hopefully and 20 meters certainly. Nighttime we will probably be dealing with 20 meters, 40 meters, 80 meters and perhapps even 160 meters. We will see if we can talk to anybody on that band."

--

Bell will operate as ZK1AQT and Lisle will be on using ZK1IPV. Both will be on as ZK1SSB for the CQ World Wide SSB Contest and will tear everything down on the afternoon of October 28th. Their QSL Manager is Norm Friedman W6ORD whose address is good in just about any Callbook. (ARNewsline™)

**

DX

In D-X, TM9AF will be on the air through October 26th to celebrate the 25rh anniversary of the Auxerre Ham-Expo. About 20 operators will be on the air with the special callsign on 160 to 6 metres using CW, SSB, PSK, RTTY, and Slow Scan TV. They will also operate 2 meters to 1.2GHz on CW, SSB FM, RTTY, and ATV. If you make contact, Q-S-L as directed on the air. (GB2RS)

Stefano Frau, IS0WBT, says by way of e-mail that special event station ISZ0A will be on air during the upcoming CQ World Wide SSB contest. This on the on 25th and 26th of October. Stefano says that the operation will take place from Mt. Cresia in grid square JM49QG. Operation will be in the multi-multi catagory and the operators will be looking to talk to all of you. QSL direct to IS0MYN. (GB2RS)

**

THAT FINAL ITEM: DUTCH STUDY SUGGESTS ISSUES ACCOMPANY 3G CELL STATIONS

And finally, can cellular telephones make you more alert? Some researchers in the Netherlands think so. Bill Pasternak, WA6ITF, has more:

--

A study by Dutch researchers has found some interesting side effects from certain cellular telephone base station radiation. Initial results show that electromagnetic energy transmitted by base stations for the new third generation or 3 G wireless networks caused subjects in double-blind test groups to experience tingling sensations, get headaches and have feelings of nausea. On the other hand, when the same subjects were exposed to signals from current mobile networks, no negative impacts were found.

But here's the kicker. When the same people were exposed to both types of fields -- that being 3 G plus current networks -- cognitive functions including memory and response times showed measurable improvement. Put simply, the subjects became more alert when exposed to both fields. The report did not discuss the modulation schemes nor the specific RF power densities that were involved in the study, and obviously allot more research needs to be done before anything conclusive can be known.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF

--

Now it has to be pointed out that these are early results. As such, while they are interesting, are yet to be confirmed. You can read more in cyberspace at www.msnbc.com/news/974005.asp (CGC)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Ken Butler, W1NNR, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2003. All rights reserved.

Could someone help and provide some direction or input on the following....

I have an application that consists of 2 sensors on each floor of a 10 floor concrete building which has open sides (e.g. Parking deck) , collecting a sample of data randomly roughly at the rate of 10 messages a minute.

The data needs to be remotely transferred to a computer on the 1st floor. A message block is 8-16 bytes in size. In a day roughly 25,000 messages will be sent from the sensors.

The data should be guaranteed to reach the computer(although packets can be resent if there is an error).

Any kind of radio transmission may be used(AM,FM,802.1x,..). It should be in an FCC approved band whereby licensing is not required.

The transmitters should transfer the data from the sensors. Only 1 transmitter should be attached to each sensor. The transmitter should have enough range to transmit the message from the 10th floor to the 1st floor. The transmitter should be roughly the size of a cigarette packet.

Please provide your suggestions and ideas as I am not a electronics whiz.
thanx
vivek

Howdy, folks.

I'm inviting you to come visit http://hfradio.org/forums/ - where I have created special forums about Propagation. These forums are for beginners as well as experts. Do you have quesitons about propagation? Wonder about current conditions? Want to discuss Aurora? This is an online community where you can explore these topics.

Also in the forums area are sections for Shortwave Listening, including equipment topics, logging, and more.

Come by and check it out. Don't be shy. Post your questions, observations, logs. Of course, it does not replace this invaluable forum, but it does provide an additional resource for all of us.

See you there,

73 de Tomas, NW7US (AAR0JA/AAM0EWA)

FOR SALE
Hallicrafters Tuning Units For HT-4 / BC-610 Transmitter
A complete set of QTY 7 available with the carrying case.
These were used with the WW2 era Hallicrafters HT-4A through HT-4F.
They are selected from the front panel to cover three frequencies.
Cover all tuning ranges TU-47 through TU-53 cover 160 through 30m
bands.

TU-47	Tuning unit, 2.0 to 2.5 MHz
TU-48	Tuning unit, 2.5-3.2 MHz
TU-49	Tuning unit, 3.2-4 MHz
TU-50	Tuning unit, 4-5 MHz
TU-51	Tuning unit, 5-6.35
TU-52	Tuning unit, 6.35-8 MHz
TU-53	Tuning unit, 8-12 MHz

These all have the original, unusual smooth (cool) Hallicrafters black
knobs that
look like miniature tires.
They all appear to be complete and have not had any parts removed or
any
'mods'
done.
Will sell for $30.00 each or all seven for $175.00 plus shipping

Pictures & details at:
http://home.cfl.rr.com/happysurfer/radios.htm

I have an older Kenwood TM-201B that utilizes a final protection circuit to protect the RF module. I do not have a service manual on this radio and would appreciate info on which trimmer adjusts the RF limiting. The brick is ok in the radio but the protection circuit is prematurely limiting output at very low VSWR.

I was looking at several sites that sell high power tubes.
There are the standard brands such as Amperex, Eimac, and even
Svetlana, but what are Taylor, Triton and RFP?
I assume some are of Chinese manufacture, but I've not heard of any of
these brands. Some are considerably cheaper and I'm suspicious of any
thing that is considerably cheaper than the competition.

There are some DX clusters that are accessible via Telnet, rather than
having to be on the air. Might that do the job for you? They should be
listed on Rod Dinkins' web site at www.ac6v.com. (As I write this, I'm
offline and can't check for sure, but if you like, drop me a note in
email and I'll do some searching for you.)

It would only work if it can email the clusters to me, which I doubt any telnet
cluster can do.

Amateur Radio Newsline™ Report 1367 – October 24 2003

Amateur Radio Newsline report number 1367 with a release date of Friday, October 24th 2003 to follow in 5-4-3-2-1. The following is a Q-S-T. The FCC begins preparing for the 2007 World Radiocommunications Conference, a new all ham crew arrives at the I-S-S and a ham a is charged with violating airport security. Find out the details on Amateur Radio Newsline report number 1367 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW: FCC COMMITTEE TO GET READY FOR WRC-07

The ink has yet to complely dry on the agreements reached ar WRC-03 as the FCC begins getting ready for the next World Radiocommunication Conference in 2007. As part of the preparations FCC Chairman Michael Powell has announced the appointment of Nancy Victory as Chair, and Peter Hadinger as Vice-Chair of the agency’s WRC-07 Advisory Committee. Amateur Radio Newsline’s Bruce Tennant, K6PZW, is here with has some background on each of the appointees:

--

Nancy Victory is the former Assistant Secretary of Commerce for Communications and Information and the former Administrator of the National Telecommunications and Information Administration. Prior to her appointment to the Department of Commerce, Ms. Victory was a partner in the Washington law firm of Wiley, Rein and Fielding, where she focused on legal and regulatory issues faced by communications companies.

Peter Hadinger is Director of Communications Initiatives for Northrop Grumman’s Space Technology Sector. Mr. Hadinger has taken industry leadership roles on global satellite issues, including privatization, protection and spectrum allocation. He is past Chairman of the Satellite Industry Association and current vice- chair of the Satellite Task Force in the President’s National Security Telecommunications Advisory Committee.

Also getting an appointment is Alex Roytblat who is Assistant Chief of the Strategic Analysis and Negotiations Division of the FCC’s International Bureau. He will direct the Commission's WRC- 07 preparatory activities and serve as the Designated Federal Official to the Advisory Committee. Roytblat directed the Commission’s preparatory activities for last June’s 2003 World Radiocommunication Conference held in Geneva.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.

--

The Advisory Committee will be tasked with providing advice and technical analyses of the nations telecommunications needs. It will also make specific recommendations on matters relating to that conference. (FCC Release)

**

TALKING ON THE AIR: BIG SUNSPOT ACTIVITY MAY HAMPER YOUR QSO’S

If you are wondering why you may not be able to make contact on your favorite band, the answer is right out there in space. According to propagation reports from the Space Environment Center, a solar storm, centered around Sunspot number 484, has grown into the biggest in recorded history. And a solar storm with a sunspot that size can easily impact on radio propagation here on Earth.

Sunspot 484 is reportedly about the size of the planet Jupiter, and forecasters say that another big sunspot could soon appear near the sun's southeastern limb. The active region is not yet directly visible, but the Solar and Heliospheric Observatory satellite has seen material being blasted over the sun's limb from the approaching spot. Major eruptions are possible from these active regions as they rotate across the face of the sun over the next two weeks.

Also this word of caution. Never, never look directly at the sun. While these sunspots are easy to see its also very dangerous to try. Unprotected eyes can suffer severe and perminant damage from looking directly at the sun. Instead, as we have said before, visit www.spaceweather.com for safe solar observing tips. (ASWLC)

**

RADIO POLITICS: NOAA SPACE WEATHER SERVICE THREATENED

Solar propagation reports like this one could soon disappear. CQ Magazine’s news service reports that the service on which many amateurs depend for reports on ionospheric conditions may have its funding sharply cut or eliminated under two versions of a Congressional spending plan for Fiscal Year 2004.

The Space Environment Center, part of the Commerce Department's National Oceanic and Atmospheric Administration, provides space weather reports on solar and geomagnetic activity that affect the ionosphere, which in turn affects radio propagation. In addition, the bureau monitors solar flares and similar events that can damage satellites. This gives advance knowledge that can help protect them. And for radio amateurs, the propagation predictions in C-Q and other publications depend on these space weather observations.

The Space Environment Center is actually operated jointly by NOAA and the Air Force, but its funding is in the NOAA budget. It suffered a 40% budget cut in the current fiscal year. The House budget proposal for 2004 calls for an additional 40% cut. But the nail that could close the coffin lid is in the Senate. That version of the bill cuts funding for the Space Environment Center altogether. The Senate says that such activities are rightly the domain of the National Aeronautics and Space Administration and the Air Force.

According to an e-mail from C-Q, the House Science Committee's Environment, Technology and Standards Subcommittee will be holding a hearing October 30th on this funding bill. C-Q says that any letters and comments from the public will be entered into the record. If you are concerned about the possible loss of information gathered and disseminated by the Space Environment Center, you may write to the House Committee on Science, Environment, Technology and Standards Subcommittee, 2320 Rayburn House Office Building, Washington, DC 20515. (CQ News Release, W2VU)

**

HAM RADIO IN SPACE: NEW ALL-HAM CREW ARRIVES AT ISS

A new three man all ham crew has reached the International Space Station, but only two of the new arrivals will remain on-orbit the next several months.

Called the Expedition 8 crew, the commander is NASA Astronaut Mike Foale, KB5UAC. He is accompanied on the I-S-S by Russian Cosmonaut Alexander Kaleri, U8MIR, and the Europen Space Agency’s Pedro Duque, KC5RGG. All three arrived at the ISS on October 20th on board a Russian Soyuz transport vehicle.

Foale and Kaleri will repace Expedition 7 crew members Commander Yuri Malenchenko, RK3DUP and NASA Science Officer Ed Lu, KC5WKJ. Duque, who's flying under a contract between the Russian and Europen space agencies and will spend the week in space before returning to Earth with the Expedition 7 crew.

KB5UAC and U8MIR hope to be active on the ISS ham radio station as time permits during their stint in space. We will have other ham radio in spaced news later on in this weeks report. (AMSAT, published news reports)

ENFORCEMENT: HAM CHARGED IN AIRLINER CASE

A 20 year old ham radio operator and college junior has been charged with breaching airport security. The FBI says that Nathaniel Heatwole, WZ3AR, has admitted to planting box cutters, bleach and matches on two airliners. Amateur Radio Newsline's Paul Courson, WA3VJB, gives us a profile of Heatwole and his involvement in the hobby:

--

If you're a contester, you may have worked WZ3AR, licensed to Damascus Maryland, a suburb of Washington DC. In research for Newsline, a profile of a fairly ordinary young ham radio operator has emerged.

His listing on QRZ.com shows a willingness to QSL both to short-wave listeners and the amateur community alike. The Advanced Class licensee appears to have been primarily active on HF, in the specialty of contesting.

In August of this year he won a thousand dollar scholarship from the Foundation for Amateur Radio, a coalition of radio clubs in the area around Maryland, DC and Virginia. In a club newsletter, he was shown as headed into his 4th year at Guilford College in North Carolina, pursuing a double major of Physics and Political Science.

His former call is KB3CBW, and an internet search has found a snapshot of a young man closely resembling who now is a 20 year old seen in television footage and accused of trying to breach airline security. As KB3CBW, he is listed several times with photos a Dayton Hamvention, 1999 gallery.

His call sign also turns up on a contest log dupesheet for Field Day 1999 on 40 meters phone, and in other contests including a Maryland-DC QSO party. On a contest e-mail reflector, someone signing that name and call sign is asking questions about the beverage antenna, and how he plans to buy a better contesting radio than his Kenwood TS-140S, that the person was using as of the posting dated 1999.

By Feburary 2000, the former KB3CBW was turning up as WZ3AR on the webpage minutes of the Potomac Valley Amateur Radio club, which serves the same area as his licensed station location in Maryland.

This call sign also shows up in various contest logs, including an Islands on the Airwaves event and Field Day. WZ3AR was shown in 2001 as operating from Virginia's Chincoteague Island on 15 meters sideband. One message thread refers to a June 2001 issue of CQ magazine, and an article on keeping a footswitch from sliding around.

There was other advice.

In a contest discussion board, someone signing those call letters rejected the practice among certain hams of tape recording contest activity to later enter the information in a competitive logbook. The posted message said such a practice raises ethical questions, and that he advised against doing so.

The New York Times has quoted friends as saying he has offered strong pacifist views and is highly principled.

For now, he is charged with carrying a concealed dangerous weapon aboard jetliners, reportedly as a test of airline security and to demonstrate his alleged protest to perceived flaws in that security.

In Weashington, Paul Courson, WA3VJB, for Newsline.

--

After a court appearance Monday, October 20th, Heatwole, a junior at Guilford College in Greensboro, N.C., was released without bail for a preliminary hearing slated for November 10th. If tried and convicted, he faces a hefty fine and up to 10 years in a Federal prison. (ARNewsline(tm), published news reports)

**

ENFORCEMENT: FCC TAKES MORE ACTION AGAINST EX-KG6IRO

A follow-up to last weeks story regarding Jack Gerritsen, the ex-KG6IRO. The FCC has now taken action against another one of his licenses and again warned him to stay off the air. Bill Pasternak, WA6ITF, has more:

--

FCC Special Councel Riley Hollingsworth has written to tell Jack Gerritsen of Bell California that the Commission’s Wireless Telecommunications Bureau has acted to set aside Gerritsen’s General Mobile Radio Service or G-M-R-S license. This, pursuant to Section 1.113 of the Commission’s rules.

The action by to set aside Gerritsen’s G-M-R-S license took place on October 14th. Hollingsworth’s letter says the action is based on Gerritsen’s alleged continued unlicensed operations and complaints of deliberate interference from transmitters the FCC says that he operates.

Hollingsworth letter tells Gerritsen that his G-M-R-S application has reverted to pending status. Also, that it will be made a part of a forthcoming hearing to determine if the former radio amateur is qualified to hold any Commission licenses. This is the same type of hearing that Gerritsen's ham radio ticket currently faces.

Hollingsworth letter again warns Gerritsen that he has no authority to operate radio transmitting equipment. If he continues, Gerritsen could face both to monetary penalties and imprisonment. Hollingsworth also suggested that Gerritsen consult an attorney in this matter.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

Meantime, the number of Los Angeles ares repeater owner operators that claim Gerritsen is interfereing with their systems continues to grow. For the moment, they and their control operators continue to turn repeaters off whenever the station claiming to be KG6IRO attempts to make a transmission over one. (FCC, ARNewsline(tm))

**

ENFORCEMENT: UNAUTHORIZED OPERATION LEADS TO LICENSE TURN-IN

Meantime, a ham has surrendered his license to the FCC after it was found that he caused problems for police radio operations. The FCC's Daryl Duckworth, NN0W, has the rest of the story:

--

Duckworth: "In March, the Enforcement Bureau notified Justin Whaley, KC9DCP, Columbia City, Indiana, that close-in proximity direction finding indicated that on numerous occasions between January 2nd and March 13th he interfered with the operation of the Columbia City Police Department radio system. In order to resolve this matter, he has agreed to relinquish his license until March 28th of 2005 and agreed not to maintain or operate an Amateur station.

--

Whaley was requested to return his Amateur Service license to the FCC. (FCC)

**

ENFORCEMENT: FCC: STAY OF THE W6RHC REPEATER

A ham who refused to stay off a repeater after being told to vacate by the licensee has now received a notice to comply from the FCC. Again, the FCC's Daryl Duckworth, NN0W:

--

Duckworth: “A warning notice has been sent to Scott Rogers, K6EVP, of Paradise, California, for failing to refrain from using the W6RHC repeater ass requsted both verbally and in writing by the trustee of the Golden Empire Amateur Radio Society. The letter was isssued as a result of his failure, verified by the Office of Emergency Services of Butte County California, to follow operational rules set forth by the licensee and control operators of the repeater system for its users.”

--

The letter went on to say that the FCC expects Rogers to abide by the request to stay off the W6RHC system and any other such request by a repeater licensee, control operator or trustee. If he uses the repeater again after receipt of the FCC warning letter, the agency says that it will initiate enforcement action against Rogers license. (FCC)

**

ENFORCEMENT NEEDED: PHONY TEXT MESSAGE TO CA CELL PHONE USERS

Bakersfield California area cellular telephone would probably welcome some FCC enforcement action. This, after they were awakened early Tuesday morning, October 21st to a phony text message.

According to news reports, someone managed to hack the areas wireless communications' system. The hacker then posted a message urging cell phone users to support a strike by many of the states grocery workers now in its second week.

The United Food and Commercial Workers Union denies responsibility for the message. A spokeswoman for the wireless service providers says that she does not know how it happened. She says that that wireless providers have no position on the strike. The sender of the message remains unknown. (Published news report)

**

RESCUE RADIO: MONTANNA HAMS GET BIG THANK-YOU

Amateur Radio's role in last summers Montana's forest fires haave received official recognition. This, when the US Forest Service and Helena area organizations hosted an appreciation picnic for all the voluntees who put themselves on the line to assist fighting the blaze.

According to the ARRL Letter, the event honored the firefighters, law enforcement officers and community volunteers who assisted with firefighting efforts in Lewis and Clark, Powell, Jefferson, and Broadwater counties. This included a number of radio amateurs who volunteered their time and gear.

Among those recognized were Jim Haslip, W7CK, and Rollie Fisher, KC7WBP. Haslip has been an aerial fire spotter for 40 summers. Fisher set up at Lincoln's

Hooper Park every day during the fires, providing current information to residents and visitors. He and his wife were among the many families forced to evacuate their homes because of the fire danger.

Amateur Radio's support of Red Cross and other relief agencies during the fire emergency also received recognition. Lewis and Clark County Emergency Coordinator Bob Solomon, K7HLN, accepted a plaque on behalf of the Amateur Radio Emergency Service and the Capital City Amateur Radio Club.

An estimated 300 people turned out for the event at the Lewis and Clark Fairgrounds in Helena. (ARRL)

**

PROMOTING THE HOBBY: JOTA VIDEO NEEDED

If you took part in last weekends scouting Jamboree on the Air, and have some good quality videotape of the event, the people who produce most of the ham radio documentaries want to hear from you. As reported two weeks ago, Dave Bell, W6AQ, Alan Kaul, W6RCL and Bill Pasternak, WA6ITF, are always looking for good video of ham radio happenings that they might be able to incorporate into a presentation about the hobby. As scouting and ham radio enjoy a very unique relationship, this is an event that is sure to make it into one of their shows, but only if they have the pictures and sound. If you have video that you want to share, please e-mail the production team to hamvideo@juno.com and let them know what you have. They will get back to you with information on where to send it. Again that e-mail address is hamvideo@juno.com (The Producers)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAM GATHERINGS: RSGB INTERNATIONAL HF AT MONTHS END

Turning to the ham radio social scene, if you plan to be in the United Kingdom from October 31st to November 2nd. listen up. Thats the weekend of the Radio Society of Great Britain’s International High Frequency and Islands on the Air Convention.

This years venue is the Britannia Country House Hotel at Didsbury in Manchester England. Planned events include presentations on DXpeditions, technical lectures, presentation of trophies and awards, a contesting forum, and specialist areas for 5 MHz, 136 kHz, 6 meters and Q-R-P. More information is on-line at the RSGB website Its in cybespace at www.rsgb.org (RSGB)

**

HAM GATHERINGS: HANDIHAMS IN CALIFORNIA IN MARCH 2004

Back on this side of the Atlantic, word that the HandiHams will hold their 2004 California Radio Camp in Malibu California begining on Monday, March 1st, and continuing to Sunday, March 7th. Tuition breaks will be provided for beginners from Western states working on a first license or on a General, and for early bird registrations. An Operating Skills course will also be offered along with opportunities for learning about blind computing with JAWS, public service communications, and lots of getting on the air!. Also, an open ham radio test session will take place on Saturday March 6.

The camp is open to HandiHam members with disabilities. Organizers provide all food, lodging, ham radio classes, and fun activities for the week long outing. To request an application or more information call the HandiHams toll free at 866-426-3442 toll-free or e-mail the group to hamradio@courage.org (HandiHams)

**

NEWSLINE: NO MORE FAX

If you have been trying to send Amateur Radio Newsline a fax the past week then you notice that our machine is not picking up. The reason -- its been taken off line due to our inability to get unsolicted fax spammers to stop sending us unwanted advertising.

Even though it is a violation of federal law to send an unsolicited fax advertisement, that has not stopped the fax spammers. They make their living by sending out this unwanted electronic junk mail. And while much the same as the junk e-mail we all get, the big difference is that unsolicited faxes waste print cartreges and paper. And that costs Amateur Radio Newsline money that we just cannot afford to waste.

After spending the past year trying to get these nuisances to stop -- including an official complaint to the FCC, we have given up. If you need to send us a fax, you will first have to call us or e-mail us to arrange for us to turn the machine on. Otherwise, the fax is gone until the federal government acts to put the spam fax mailing companies out of business. (ARNewsline(tm))

**

EMERGING TECHNOLOGY: BALLOON DELIVERED RADIO

Turning to the emerging technology page, it now looks as if balloon delivered radios could bring new sound to North Korean residents. This, if a preacher gets his way.

Revrend Douglas Shin wants to help liberate North Korea by delivering radio recievers by balloon. Shin’s idea is to have helium filled balloons would carry radios acrosss the Demiliterized Zone into North Korea. An automatic valve would let the gas out slowly so the balloons touch down softly without damage to the payload.   Once retrieved by the people in North Korea, they would only have to turn them on and listen.

Shin says that he plans to launch his balloons from South Korea or ships off shore. Included aliong with each radio will be prayer material and a North Korean bank note. The latter is worth about one U-S Dollar. (Published news report)

**

HAM RADIO IN SPACE: THE AMSAT VOLUNTEER SURVEY

AMSAT North America says that it has developed an on-line volunteer survey designed to identify the interests and skills of those who may be available to directly help in efforts to develop the amateur satellite program. The survey is designed to be completed and returned on-line, and takes only a few minutes to fill out. To request the survey, simply send an e-mail request to volunteer@amsat.org. (ANS)

**

SPECIAL EVENTS: REMEMBERING THE EDMUND FITZGERALD

Turning to operating news, members of the Stu Rockers group will be on the air from Whitefish Point and Paradise, Michigan on November 7th , 8th, and 9th about 10. This, for an event called `Remembering the Edmund Fitzgerald.'

2003 marks the 7th year that the Stu Rockafellow Amateur Society has sponsored a special event in remembrance of the famed ship and her crew. Look for the call N8F on 40 through 10 meters and QSL to Richard Barker, W8VS, 264 N. East St., Brighton, Mi. 48116 (W9RIF)

**

SPECIAL EVENTS: REMEMBERING VETERANS DAY ON THE AIR

Also, in recognition of both Veterans Day and the birth of the late General Curtis LeMay, W6EZV, the Strategic Air Command Memorial Amateur Radio Club will be operating stations K0AIR and K0GRL. This, on Tuesday, November 11th from 1200 hours to 2400 hours Zulu.

According to Darwin Piatt, W9HZC, the stations will take top the air in the general phone bands on or near frequencies ending in the numerals 47. Piatt says that his is in recognition of the year 1947 when the Air Force became a single entity. He says to QSL K0AIR and K0HRL to the Strategic Air Command Memorial Amateur Radio Club, P.O. Box 1292 Bellevue, Nebraska, 68005. (Via e-mail)

**

ON THE AIR: THE SOUTHEASTERN 6 METER NET

And Jim Worsham, W4KXY would like to remind everyone of the Southeastern 6 Meter Net which meets on Sunday nights at 9 PM eastern time on 50.145 Mhz SSB. The net control is usually Jim who lives in grid square EM84ab. If anyone has any questions about the net they can contact Jim directly. His e-mail is w4kxy@bellsouth.net (VHF Reflector)

**

PROPAGATION AIDS: TRANSATLANTIC BEACON IN PLANNING

The Marconi Radio Club of St. Johns, Newfoundland and the Caccalieu Amateur Radio Club of Carbonear are currently working to put a new 2 meter transatlantic beacon on the air. According to information from the Irish Radio Transmitting Society, the proposed beacon will operate on 144.4 MHz with power output of 250 Watts into an 11 element Yagi. It will be sited at about 90 meters above sea level.

**

DX

In D-X, At least five special event stations are on the air from Poland through the end of October to celebrate Pope John Paul the Second's Silver Jubilee. Keep an ear open for HF8JP; SN25JP, SR25JP, SO25JP and HF25JP. If you make contact QSL as directed on the air. (Via e-mail)

And ten German operators and their guests from other countries will be operating from Liechtenstein through the 31st of October. Keep an ear open for the call HB0/HB9AON using SSB, CW, PSK and RTTY on all of the HF bands. (RSGB)

**

THAT FINAL ITEM: MEASURING THE SPEED OF GRAVITY

And finally this week, it appears as if Albert Einstein was right. Amateur Radio Newsline’s Mert Garlick, N6AWE, tells us about what:

--

The great Albert Einstein was correct when he said that the speed of gravity matches the speed of light. This, according to astronomers who took advantage of a rare planetary alignment to survey the relationship of these two fundamental forces of nature.

Edward B. Fomalout of the National Radio Astronomy Observatory, and, Sergei Kopeikin of the University of Missouri, measured the amount that light from a distant star that was deflected by the gravity of Jupiter as the planet passed in front of it. The researchers used 10 radio telescopes scattered around the world to precisely gauge how light from a distant quasar was bowed or warped as it passed by Jupiter on its way to the Earth.

To make the measurement, the instruments had to detect a minute deflection of the light. Dr. Fomalout compared the required precision to being able to measure the width of a human hair from 250 miles away.

Jupiter is in the precise position for such a measurement only once a decade. The locations of the telescopes ranged from from Hawaii to Germany. Researchers are very happy with the experiments seeming total success.

For the Amateur Radio Newsline, I’m Mert Garlick, N6AWE, near the Queen Mary in Long Beach California.

--

Knowing the precise speed of gravity is important to physicists looking for technologic break-throughs. It also affects some of the basic theories of the relationship of space and time. (Science Today)

(The last try at this did not contain the text! - My apologies...)

Folks:

What an exciting time for radio enthusiasts! This past weekend's media hype about a major geomagnetic and solar storm was unfortunate and unwarranted. But, today, solar events have occurred that has the whole propagation science community buzzing.

I just finished talking with Mike Weaver from the National Ocean and Atmospheric Administration Space and Environment Center (NOAA SEC). He is the Solar Forecaster that has been on duty for the last four days. Last week, I also spoke with Bill Murtagh, who is beginning a shift to cover the next few days. Our discussion focused on today's events, and what will transpire over the next few days. The following is my perspective of current solar and geophysical conditions and the forecast for the next 48 hours or so.

On 28 October 2003 UTC, an X17.2-class flare from NOAA Region 486 occurred at 0951Z, peaking at 1110Z. This caused severe radio blackouts (R4 is the reported level, see http://www.sec.noaa.gov/NOAAscales/ for details on the scales used) on the sunlit side of the Earth (which would have been morning, on the eastern coast of North America). It also created an S3 (strong) solar radiation storm. Associated with this flare are a proton event and a full-halo coronal mass ejection (CME). This flare is the second most intense of the current solar cycle. It is not historical. We expect several of these large flares during any given solar cycle.

The proton event started at about 1330Z, and has exceeded all threshold levels, causing a Polar Cap Absorption event (PCA). It is expected that this proton event will be prolonged and last for the next 36 hours, to some degree. This will cause transpolar path degradation (don't expect any DX over the poles nor over any high-latitude paths) for the next few days.

The CME was a full-halo, and is directed squarely at the Earth. Based on the speed and recordings, so far, Mike expects it to impact the Magnetosphere at about 1500Z 29 October 2003. When it hits, the shock alone will produce at least G3-level geomagnetic activity. This would translate to a Kp index of about 8, even if the IMF (Interplanetary Magnetic Field) is not pointed south when the CME arrives. After the initial shock wave, if the Bz is negative, indicating that the IMF has turned south, the Kp index will remain high, with a possible Kp of 9 during the passage of the CME. This will cause between a level G4 and a G5 (severe to extreme) geomagnetic storm. This will severely degrade HF and MW radio communications (while possibly enhancing VHF/UHF propagation).

The timing of the arrival of the CME shock will occur after sunrise for those in North America. Therefore, I do not expect to see any Aurora tonight, local time on 28 October 2003. However, I do expect radio auroral mode propagation during the day of 29 October 2003, and continuing into the night of the same day. If the IMF remains negative, there is a strong chance of a prolonged severe geomagnetic storm, with associated Aurora viewable as far south as southern California and Florida.

Continued radio blackouts are likely from new flare activity. As I write this, we are in the decline of a new M-class flare. There are eight main regions on the visible solar disk, three of which are actively producing flares. One of these is about to rotate out of view. One of the new regions just rotating into view is active, and has already produced some M-class flares.

Overall conditions:

In the next 12 to 20 hours, expect great conditions on frequencies above 15 MHz, while in general, all HF will have periods of radio blackouts during the flare events, if they occur. (And, they will occur). Sometime around 1500Z, tomorrow (29 Oct 2003), expect all HF communications to become severely degraded with the arrival of the CME shock, and for a severe to extreme geomagnetic storm to commence and last for a prolonged period. S3-level (severe) solar radiation storm conditions will last for the next 24 to 48 hours.

I expect a lot more activity during this week, but I don't view this as a "third" peak in this current solar cycle, number 23. Several past cycles have had such bursts during the decline of those cycles.

I'll post more about this soon.

That statement IS tongue-in-cheek, right? By far the largest part of the world's population no doubt doesn't view us at all, doesn't even (or barely does) know we exist (billions in India and China). Of those that do know we exist, most see us as decadent, Godless, and hedonistic. And, thanks to the press at large, that we live in fear of criminals taking our lives and property (and that our guns only make this worse).

Tell you what...I care not one whit about how China or India views us. Nor do I worry about what the Libral goons have to say.

Am I decadent? Yeah...I am moral, work for my paycheck. Don't believe in queers getting married.
If you dislike my stance, get lost. Now.

Quick update:

At least an X10 or X11 class flare just occurred, peaking at 2049Z 29-X-2003, adding to the already dead HF conditions due to the CME passage and the Kp >= 7. This one is a short-lived flare. Quick recovery is expected. I don't know, yet, what CME might be associated, if any. Details, soon.

At the moment, most of the HF spectrum is "closed" to propagation, not because of the flare. I'm have not been hearing signals here in the Pacific Northwest on most of the HF, before the X11 flare. On many e-mail reflectors, I am reading some folks as saying, "Wow, that X17 flare sure has shut down the bands." Actually, it is not that solar flare that messed up the bands, today. Flares tend to cause radio blackouts that might last from a half hour to a number of hours. On the otherhand, major geomagnetic storms will cause HF radio propagation degradation because of "recombination."

Today's general outage is due to the passage of one of the fastest moving coronal hole mass ejections on record. It caused the highest Kp index - a level 9 geomagnetic storm. Since it hit us, the Kp index has remained at or higher than 7. This is a severe geomagnetic storm. During a geomagnetic storm, the ionosphere experiences "recombination" - much like what happens at night. The maximum usable frequencies fall - sometime no HF propagation is possible, because the ionosphere is completely recombined... this is what is happening at this moment. Most of the HF spectrum is "shut down."

Now, added to this geomagnetic storm and the general closure of the HF spectrum, we have this new X11-class flare from 2049Z. I don't yet know if a CME was associated with this one.

More as details become available...

rec.radio.shortwave:3476 rec.radio.amateur:5931 rec.radio.amateur.dx:471

A coronal mass ejection (CME) associated with yesterday's X10-class flare (peak at 2049Z 29-X-2003) impacted the Earth's magnetosphere today at about 1700Z 30-X-2003. Kp index reading show 7 and 8 at many reporting stations. Bz is at the moment strongly negative. At least a G4-level geomagnetic storm is in progress as well as a very strong proton event (PCA) and space radiation storm. This space radiation storm has reached an S4 level on 29-X-2003, and is again on the rise. It is the second-most energetic event during this current solar cycle, 23. Expect this storm to coninue, especially with the prediction of further flare events.

The Aurora index is 10 (maximum), as I write this. This indicates a very strong Aurora. Look for continued AU propagation (reports from yesterday show VHF propagation via AU as high as 222 MHz) and visuals at high to some middle latitudes. I expect a medium to high probability for visual aurora in northern states of the US, tonight.

Solar activity remains at extremely high levels. Region 486 is now the largest sunspot complex of the solar cycle. This very huge sunspot covers an area of over 7.8 billion square miles and there is some indication that it might continue to grow. The flare potential is still very high and further X-class flares are possible, which will affect us until this region rotates over the western solar limb on 5-XI-2003. Several M-class flares, and a number of C-class have occurred already from this region, since the X10 flare. Region 488 has further developed and has merged with former region 493. The region could produce X-class flares. Some M-class and C-class flaring has occurred from this region, as well.

I agree with Thomas (KN4LF) and others that the X17 flare was historic. But, I would say that this increase in solar activity is not uncommon during the decline of a solar cycle. Other cycles have given us the same sort of excitement. What's more, we're in the fall Aurora season. Twice a year, near the equinox, the conditions are favorable for Aurora. Such is the time now. Having the sun provide us with lots of aurora-causing events has given opportunity for some unexpected but welcomed VHF propagation, and visual light shows.

Overall conditions right now are rather poor. I do hear some north/south paths on 11 meters open, but not much more than that. WWV is non-existant at my location, except a faint fading whisper at 10 MHz. Lower frequencies are a bit more alive. The flux is nicely high, so when the geomagnetic fields settle down a bit, the higher level of ionization provided stronger openings on the HF bands, and higher in frequency. Last night, I was hearing SW DX on as high as 17 MHz. This morning, 10 meters was nicely open for North/South paths here into the Pacific Northwest.

I am in East Central Alabama. I am hearing 55A signals on six meters.
Worked IL and OH. It was strong enough to work K9OIM on SSB.

I only run 60 watts output to a 3 element yagi.

Amateur Radio Newsline™ Report 1368 – October 31 2003

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to our voice newscast. Free FTP Downloads are available at our website by clicking on the newscast number at the top of the page.

de
The Newsline Production Team

Amateur Radio Newsline report number 1368 with a release date of Friday, October 31st 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio comes to the rescue as southern California is swept by wildfires and a new Amateur Radio satellite will be launched early next year. Find out the details on Amateur Radio Newsline report number 1368 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO AND THE SOCAL FIRES

From the Mexican border to the suburbs north of Los Angeles, large sections of the Southern California were under siege the past week. This, as ten major and several smaller wildfires blazed their way across the area.

Fanned by hot, dry Santa Ana winds gusting to 60 miles an hour, the wildfires dervored everything it their path. At least a eighteen people are dead and over 1500 homes and businesses have been destroyed. And as we go to air, well over 1 million acres have burned.

Gordon West, WB6NOA, has been at one of the busiest Red Cross evacuation centers for the past several days. He took time out to file this first hand report on how hams are aiding in fire relief efforts:

--
Audio report only. Hear it at www.arnewsline.org/quincy
--

As we go to air, ham radio operators continue their firefighting communications support efforts. More on their role in future Amateur Radio Newsline reports. (ARNewsline(tm))

**

RESCUE RADIO: KCOP REPORTS ON HAMS DOING FIRE DUTY

Los Angeles television station KCOP appears to be the only one so far to mention the role the role ham radio operators are playing in fighting the Southern California wildfires.

On Monday night October 27th, the stations 11 P.M. newscast showed video of a group of unidentified hams at their radios in the Los Angeles western suburb of Simi Valley. At the same time anchorman Rick Garcia read a brief synopsys of what the radio amateurs were doing. It explained how the hams could provide communications between the various relief agencies that could not speak directly with one another.

While short and simple, the report was well written, accurate and nicely done. KCOP is one of two Fox owned stations serving the Los Angeles area. (ARNewsline(tm))

**

RESCUE RADIO: CALIFORNIA WILDFIRES FROM SPACE

The wildfires that ravaged southern California were even impressive from space. Just before returning to Earth, NASA astronaut Ed Lu took photographs from 240 miles above the fires through the windows of the International Space Station. The photos taken on Sunday October 26th are on-line at www.spaceflight.nasa.gov/station. (NASA)

**

RADIO LAW: AUTHORITIES LOOKING FOR ALLEGED TOWER TERRORIST

Law enforcement authorities in northern California and southern Oregon are searching for a man seen tampering with electrical towers. This, as one official says that the incident smacks of being an act of domestic terrorism.

According to the CGC Communicator, the latest incident took place the week of October 20th just south of Redding California. It involved a heav-set man who used large wrenches to completely unbolt one leg of a four legged transmission tower.

Authorities say that he had half the bolts removed from a second leg when he was spotted and fled. Witnesses chased the suspect onto Interstate 5, where he sped south into Tehama County and disappeared. As we go to air he is still at large.

According to a news release from the Federal Bureau of Investigation, the suspect is similar in description to a man seen removing bolts at another tower near Klamath Falls, Oregon earlier in the day. He is described as a white male, in his early 60’s with long, blackish-gray hair and a salt-and-pepper beard.

More details on this story and the suspect are in cyberspace at: http://redding.com/top_stories/local/20031022toplo043.shtml (CGC Communicator)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world and this week recognizing the support of the Quarter Century Wireless Association and its chapters world-wide.

(5 sec pause here)

**

HAM RADIO IN SPACE: ECHO LAUNCH ANNOUNCED

Ham radio will soon have another new bird on orbit. This as AMSAT-North America announced that launch of the AMSAT OSCAR-E will take place on March 31st. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

That's right. Some really good news on the ham radio space front. This, as word comes that the Echo ham radio microsat is now scheduled to launch on March 31, 2004.

Earlier plans had called for a May 2004 launch for the tiny bird. Echo Project team member Richard Hambly, W2GPS, reported at AMSAT-North America's Annual Meeting that the project has made significant progress in recent months. So much so that advancing the launch date was possible.

Echo is a fairly simple ham radio by todays standards. It has two UHF transmitters. Each one runs from 1 to 8 watts and the bird is capable of simultaneous operation. Also on board are four VHF receivers and a multiband, multimode receiver capable of operation on the 10 meters, 2 meter, 70 cm and 23 cm bands. This means all sorts of transmit and receive band combinations will be possible once the tiny ham-sat is in space. This includes PSK31 on a 10-meter SSB uplink.

Hambly says that the project team powered up the Echo flight hardware in late summer at Space Quest. Data communications, command and control, and attitude control subsystems were tested. Also checked out were the radio equipment, power systems and cabling. It all checked out and that's good news for hams waiting for this latest addition to its family of birds in space.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

A Russian rocket will carry the 10-inch-square satellite into a low-Earth orbit from the famed Baikonur Cosmodrome in Kazakhstan. (ANS)

**

PROPAGATION: ANOTHER CME AT SUNSPOT 486

More solar activity affecting ham radio. This, as one of the most powerful solar flares ever recorded erupted on the Sun the morning of October 28th.

It happened near giant sunspot 486. That's the sunspot we reported on last week and this latest explosion hurled a coronal mass ejection or C-M-E directly toward Earth.

Based on the speed and recordings it was expected to to impact the Earth's Magnetosphere at about 1500 U-T-C on October 29th. When it hit, the shock alone wold produce a G 3 level geomagnetic activity. A level high enough to produce bright auroras at high latitude sites such as Scandinavia, Alaska, and Canada.

As hams are well aware, a solar storm can fully disrupt communications on some bands while creating unexpected propagation on others. What this one is doing is still developing as we go to air. More on this story as the reports come in. (ASWLC)

**

DX DEBACLE: ANNABON ISLAND TEAM SPEAKS OUT

An update to the plight of the plight of the Dxpedition group forced to flea Annabon Island a few weeks ago. Jeramy Boot, G4NJH, is in Nottingham England with the rest of the story.

--

We reported two weeks ago that the 3C0V DXpedition to Annobon Island - off the west coast of Africa - had been forced to close down but at that time the reason for the enforced closure was not known. A press release has now been issued by the 3C0V team which says that all four operators - DJ9ZB, EA5YN, EA5FO and EA5BYP - are now back home safe and sound.

The press release says that each operator had proper individual licences and the group had written authorisation to import and operate amateur radio equipment on the island. However, on the 4th of October the military authorities there demanded that the group should dismantle the stations and leave for the Equatorial Guinea capital. Two days later DJ9ZB and EA5FO were allowed to leave the country but the other two team members remained in the capital until the 10th, when they were eventually able to return to Spain.

Jeramy Boot, G4NJH.

--

The complete press release is in cyberspace at www.tabarca.es.mn Wew will have more DX news later on in this weeks program. (GB2RS)

**

ENFORCEMENT: FCC WRITES TWO CITIES ABOUT INTERFERENCE TO THEIR HAMS

The FCC has contacted officials in two cities about interference to their local ham radio operators. The Agency's Daryl Duckworth, NN0W, explains:

--

Duckworth: “The mayor of Lubbock Texas, along with copies to the Lubbock City Manager, the Lubbock City Attorney and Lubbock Power and Light have been sent a letter concerning interference to Brian Edwards, W5KFT. This interference, possibly from equipment operated by Lubbock Power and Light, dates back to 1998.

Along similar lines, the mayor of Gouverneur, New York, has a follow-up letter concerning the lack of response to a previous FCC notification of RFI to Morton Howard, W2ATO. The mayor has 15 days from receipt to reply.

This has been Daryl Duckworth, NN0W, reporting.”

--

Both mayors were invited to contact FCC Special Counsel Riley Hollingsworth if they have any questions concerning these matters. (FCC, RAIN)

**

ENFORCEMENT: FCC RAIDS SAN FRANCISCO UNLICENSED STATION

The Federal Communications Commission has raided the San Francisco couple's home and shut down an unlicensed radio station. The action removed Liberation Radio, a low-power alternative FM station that broadcasts political views and independent music programs from the airwaves.

The operation took place at the residence of Jim and Charlotte Hatch. The Hatch's had been told to take the station off the air before the raid. Their first warning came in July, when FCC investigators showed up at the couple's home and asked to inspect the equipment. They refused the FCC entry and were warned that they faced a potential $17,000 fine.

Instead, agents returned on Wednesday October 15th with a search warrant and more than a dozen federal marshals and confiscated the stations’ broadcast equipment. This included the transmitter, mixing console, computers, tape and CD players, turntables and even the rooftop antenna.

No charges have yet been filed against anyone associated with the station but further enforcement action is expected in this case. (Published news reports)

**

ENFORCEMENT: TEXAS FIRMS CITED FOR CB RADIO VIOLATIONS

The FCC has cited David P. Pace Jr of Nacogoches, Texas, for alleged violations of its rules dealing with the sale of 11 meter C-B gear. According to ther agency, Pace, doing business as Pacetronics and Pace Marketing was offering for sale more than three dozen types of non certificated CB transceivers under the guise of them being ham radio transceivers.

According to the ARRL Letter, the FCC evaluated similar radios and found that the devices at issue are not only amateur radios but can easily be altered for use as Citizens Band devices as well. The regulatory agency says that dual use CB and amateur radio gear cannot be certificated under its rules.

The FCC also warned Pace that its rules requires certification for external RF power amplifiers or amplifier kits capable of operation between 24 and 35 MHz. The FCC asked Pace to submit a written statement describing actions taken to correct the apparent violations. The FCC's Dallas office issued the citation. (ARRL)

**

COMMUNICATIONS CRIMES: FLORIDA MAN CONVICTED OF VIOLATING DMCA

A Boca Raton Florida man has been convicted of selling hardware to illegally tap into DirecTV satellite broadcasts. Following a four-day trial in federal court, a jury has found that Thomas Michael Whitehead guilty of one count of conspiracy, two counts of selling devices designed to unlawfully decrypt satellite television programming and three counts of violating the Digital Millennium Copyright Act.

The Digital Millennium Copyright Act is a 1998 federal law that makes it illegal to make or sell any technology designed to get around copy protection measures such as the electronic cards used by DirecTV to give consumers access to its programming. With his conviction, Whitehead becomes the first person to be found guilty by a jury under it. He faces a maximum sentence of 30 years in federal prison and up to up to $2.75 million in fines. (Published news reports)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: GET READY FOR BOOK RFI

Remember those Radio Frequency I-D tags that are of such concern to ham radio? Well you will never guess where they are about to show up. Ken Butler, W1NNR, tells us:

--

The San Francisco Public Library's plans to track books by inserting an RFID tag to each one. These are the same radio tags that hams tried to get the FCC to not deplioy earlier this year.

Now, library officials in the Bay area say that they will install the RFID's, into the roughly two million books, CDs and audio visual materials patrons can borrow. The system still needs funding and probably will not be ready for deployment until at least 2005.

--

So in a few years when you receive QRM to your ham radio operations, you might find that its coming from that novel you are reading late at night. (Science Today)

**

CONVENTIONS AND HAMFESTS: HAMVENTION 2004 WILL BE AT THE HARA

The Hamvention will remain at the HARA Arena through 2004. This, according to an announcement from the Dayton Amateur Radio Association which says that it has signed a one year contract that will keep Hamvention at the facility through next years outing.

The Hamvention planners are also looking for volunteers that want to help make Hambention 2004 a big success. To help gather support a new volunteer your services form is available at the Hamvention website. Its an on-line, fill in the blank form and you will find it at www.hamvention.org/volunteer.html. Just fill it out and the Hamvention folks will get back and let you know how you can assist.

The 53rd annual Hamvention will be held May 14th through the 16th, 2004, at the HARA Arena in the Dayton suburb of Trotwood Ohio. (DARA)

**

CONVENTIONS AND HAMFESTS: MICROWAVE MEET IN THE UK

Meantime, word that the Martlesham Microwave Round Table will take place on Saturday the 8th and Sunday the 9th of November. This, at the B-T Adastral Park, near the city of Ipswich in the United Kingdom. Featured will be a full program of talks and seminars including speakers from Europe and the United States along with a giant flea market. Full information is on-line at http://mmrt.homedns.org. There is no www in this URL address. (GB2RS)

ON THE AIR: THE 2003 SIX METER SPRINT

Last weekends 6 meter Sprint brought quite a bit of operation to the Magic Band. NEZ0P, one of the stations posting to the VHF Reflector says that he heard or contacted several semi rare stations for this time of the year. This included AA7J in grid DN-30, VE3CDP portable W9 in EM-58 and a couple of others. John adds that he held 34 Q-S-O's with stations in 25 grid squares during the short operating event. This included contacts into Maine, New

Hampshire and Vermont. Not bad for a band that usually produces little excitement at this time of year. (VHF eflector)

**

ON THE AIR: THE BAJA NET INVITES YOU

Berand Kirschner, WB0YCQ, reminds everyone that the The Baja Net meets daily at 08: 00 local California time on 7.238 Mhz. Kirschner describes the Baja Net as a friendly gathering spot for boaters. RV'ers and others who carry ham radio as they roam. (WB0YCQ)

**

DX

In D-X, word that ES1FB plans to be active as XW1FB. This, from Vientiane, Laos, threough the 4th of November. No word on times, frequencies or modes. (GB2RS)

Also on through November 4th will be K3BYV and N3CXM. They will are active as PZ5DX and PZ5JR respectively from Suriname. For both operations,. QSL as directed on the air. (GB2RS)

And GB50RAEN is on the air to celebrate the 50th anniversary of the founding of Raynet. Raynet is Great Britain'd equivlant of our ARES and RACES combined. The station is being operated by groups from West Midlands Raynet in the UK. (GB2RS)

Lastly, VK8NSB reports via Q-News that the Darwin Amateur Radio Club in Ausrtralia's Northern Territory will be operating a special event station to celebrate 25 years of self government. The station signing VI8NT will be on through the 31st of December. QSL directly to VK6NE or via the bureau. (Q-News)

**

THAT FINAL ITEM: ARNEWSLINE(tm) NAMES NT3V NEW CHAIR OF YHOTY COMMITTEE

And finally this week, we at the Amateur Radio Newsline are happy to announce the appointment of Mark Abramowicz, NT3V, as the new Chairman of our Young Ham of the Year Award Committee. Abramowicz replaces Larry Zettwoch, KR4IF, who served in that position the past 9 years.

For those of you not familiar with NT3V, Mark hails from Reading Pennsylvania, and happens to be the father of our 2002 Young Ham of the Year award recipient, Josh Abramowicz, KB3GWY. But Mark and Josh are not the only hams in the Abramowicz family. Mark's wife Suzanna is NZ3G and his daughter Amy holds the call sign KB3IJW. Only the two youngest members of the Amramowicz family -- sons Jonathan and Jordan are not licensed. At least not yet.

By profession, Mark is a news reporter and anchor at KYW radio in Philadelphia where he is known professionally as Mark Abrams. He is also is an adjunct professor at Temple University where he teaches writing for mass media and broadcast newswriting. And like his predecessor, Mark is very involved with the scouts and scouting program as are his two older children.

A very nice bio on Mark Anramowicz, NT3V, can be found at the KYW website. That U-R-L is http://www.kywam.com/staff/bios_detail.cfm?biosid=53
(ARNewsline(tm))

I finally went and did the paperwork to change my 1975 Technician + code license into a General ticket. I took the Extra written at the same time, with no expectation of really passing it on the first try.

But when I got the response from the FCC, there was a surprise. Two envelopes, each with an identical copy of a General license in my name!

Additionally, the expiration date on both is March next year.

Doesn't paying the fee and having new paperwork generated result in a license renewal?

Date: Mon, 03 Nov 2003 13:21:23 GMT
Xref: archiver1.google.com alt.ham-radio.hf:3663 rec.radio.amateur:5940 rec.radio.amateur.dx:531 rec.radio.shortwave:3836

At the time of writing this bulletin, there has been three X-class flares in less than 24 hours. The first was an X8.3 flare from region 486 on 2-XI-2003, at 1725Z. Then, today (3-XI-2003) at 0130Z there was an X2.7 flare from region 488, followed at 0955Z by an X4.3 flare from the same region.

The CME associated with the X2.7 flare probably will not reach Earth. A radio burst was associated with the X4.3, indicating a possible CME for this flare, as well. However, due to its position, it is doubtful if this CME will impact Earth.

At the moment the geomagnetic conditions are quiet, with the The north-south interplanetary magnetic field component (Bz) remaining positive. There is a flow from a small coronal hole in the sun's southern hemisphere that is expected to arrive now. It is hard to know if it has arrived due to the loss of ACE data due to the proton storm. The proton event associated with the X8.3 flare continues, and is extended somewhat by these new flares, masking some of the readings we use.

The CME associated with the X8.3 flare will glance us sometime late on 3-XI-2003 to mid 4-XI-2003. We expect a possibly strong geomagnetic storm in the next 24 hours, as a result.

The solar 10.7-cm flux is starting to drop, but is still high enough to support propagation on the high HF frequenies. The low bands will suffer somewhat when the Kp index starts to rise later today due to shock expected from the CME, and from the flow from the current coronal hole.

Region 486 and 488 are rotating around the western limb of the sun by 5-XI-2003, and flaring should quiet down somewhat. Until then, some additional C, M, and X flare activity is possible. The coronal hole activity, however, will continue through this week, at least.

Bz changes sign in a few minutes so I don't know that it matters on
the scale of a report. It's whatever tangle of field lines the solar
particles are carrying at the moment, not something large scale.

Charged particles can't cross field lines, and the particles aren't
going to stay put, so the field lines go with them. That's mathematics
for you.

Date: Tue, 04 Nov 2003 21:43:12 GMT
Xref: archiver1.google.com alt.ham-radio.hf:3667 alt.ham-radio.vhf-uhf:20378
rec.radio.amateur:5942 rec.radio.amateur.dx:558 rec.radio.amateur.misc:1608
rec.radio.shortwave:3977

At 1955Z, 4-XI-2003, an X-class flare peaked from region 486. Initial data from GEOS 12 indicates that the flare is an X18, while GEOS 10 shows it as X17. However, there is speculation (i.e., Thomas Giella (KN4LF), others) that it might be much stronger, as this event saturated the sensor for 11 minutes. I have viewed preliminary images of this very bright and significant flare, and it is truly amazing.

If the flare is larger than the X17 flare from recent activity, this will become one of the two most powerful flares recorded. The flare has caused extensive radio blackout conditions on most of the HF radio spectrum. Ground wave communications is not significantly impacted, nor is line-of-sight VHF and above.

A type II Radio Emission began at 1942Z 4-XI-2003 with an estimated velocity of 1268 km/s. Interplanetary type II bursts are statistically strongly associated with fast CME and interplanetary shock waves (Cane, Shelley & Howard 1987). Thus, there is a chance that we will have at least a glancing blow from the side of the possible CME associated with this new flare. I will update when more data is known.

We would like to invite you to discover our recent updates on
http://etols.halfin.com (electron tubes online shopping)

- new presentation of the homepage
- a more friendly search engine
- quick links to most wanted tubes
- new products such as tube sockets, boxes, top caps

Special offer on :

ECC81/12AT7	RFT	11.05 US$
6SL7GT	RUSSIAN	3.05 US$
6V6GT	RUSSIAN	3.15 US$
6L6GC	SVETLANA	13.90 US$
KT88	SVETLANA	40.00 US$

Matching 1.75 US$ per tube

But also : EM4 - F2A - GZ37 - 5300B - 6C33/CB - EF86 - F2A11 - VT4B - RS1003 - EL34 - 12AX7 - EL84 - ECC83 - 12AU7 - 6L6 - 6SN7 .

Major brand : MULLARD - SIEMENS - TELEFUNKEN - WESTINGHOUSE - DARIO - VALVE ART - VALVO ..

Worldwide delivery
For more : Visit http://etols.halfin.com

Date: Wed, 05 Nov 2003 20:09:51 GMT
Xref: archiver1.google.com alt.ham-radio.hf:3672 alt.ham-radio.vhf-uhf:20386 rec.radio.amateur:5945 rec.radio.amateur.dx:576 rec.radio.amateur.misc:1635 rec.radio.shortwave:4062

I have just finished a talk with Christopher Balch from the Space Environment Center, NOAA, regarding the super flare from 1955Z, 4-XI-2003. This flare saturated the instruments on the observing satellites for about 13 minutes, during the peak of the flare. This has made an accurate measurement of the flare's intensity difficult. The instruments stopped at X17.4.

The scientists and engineers who designed the original sensor equipment back in the 1970's had events that caused saturations at much lower levels. They redesigned things to handle X17-class events, thinking that it would be enough. This time, it was not.

Since we do not have any accurate record of flare intensity prior to the 1970's, our perspective of this latest series of flares is somewhat limited. Certainly, X-class flares of this magnitude are not regular events. But, they certainly are not unheard of. To pull out a rough estimate, but with very little confidence on this number, on how often we might see such activity, we think this is something we could see every 20 to 40 years.

Currently, as I write this, the Space Environment Center, who is the official "last word" on what a flare's classification becomes, is finalizing their analysis on this super flare. Chris has obtained two likely candidates: Using a standard log-normal fit analysis, the flare was

X25. Using a result from an individual from the University of Colorado, Boulder, who analyzed HESSI data on the event (http://hessi.ssl.berkeley.edu/), the flare was an X28. The SEC has a procedure that Chris is finalizing, and validating. He will announce the final reading later today. Most likely, this flare will be somewhere between the X25 and X30 levels.

Certainly, the geomagnetic storming of the last few weeks is one of the highest in many years. It is officially number six on the scale of intensity in the last 30 years. The two major sunspot groups, the number of flares, and the CME activity makes this period the most active and intense of this solar cycle. We have witnessed a truely spectacular historical moment.

What's coming down the line? I usually base my forecasts on a 27-day solar rotation period. What happens today in terms of geomagnetic activity is possibly what will occur 27 days from now. Of course, sunspot and coronoal hole activity might decline duing that rotation period. The outlook is that in about 5 to 10 days, a sunspot group that had a lot of activity is going to rotate back around and start to influence space weather. But the big question is: Will these huge sunspot groups that just left us retain enough energy to last the 27-day rotation, to deliver another period of extreme solar weather?

NASA is planning to launch in November 2005 the "Stereo Mission" (http://stereo.jhuapl.edu/mission/overview/overview.html), which will place an observing space craft leading the Earth's orbit, and another space craft trailing the Earth, such that they will be able to see around the sun at what is coming and what has went. This certainly will become a major tool in our forecasting of space weather, and propagation.

I will post my propagation forecast on http://prop.hfradio.org/ late today.

The Coronal Mass Ejection (CME) from the X25+ flare of 4-XI-2003 should arrive anytime, today. It will be a glancing blow, yet there is an expectation that it will be strong enough to trigger a major geomagnetic storm. Then, tomorrow or Saturday the Earth may be exposed to a fast solar wind stream from a small low-latitude coronal hole, now rotating in geoeffective position. This can maintain active to minor storm conditions for one or two days. The Polar Cap Absorption (PCA) event is still active, but decreasing, possibly ending by the end of 6-XI-2003. However, if shock-accelerated protons increase the >10MeV proton flux due to the arrival of a CME later today, the PCA could be extended for another one to two days. This will shut down over-the-pole and high-latitude propagation paths.

Solar activity has dropped over the last day, and the background X-ray levels are finally down in the B range. This is making it better for the lower bands. The 10.7-cm flux is decreasing, as well, so the highest HF bands are less likely to propagate.

Hello. If there are any hams on here from Seoul, Korea, I was wondering if you could help me. I was stationed there in 97/98. While there, I bought a 2m "super" J-pole antenna at the Yoido ham radio flea market. It is two pieces, a top and bottom, with a coil in the middle and it is homemade. At some point, the coil portion disappeared, or it may be buried somewhere deep in the boxes in my atic.

If there are any hams in the Seoul, Korea area that frequents the market and could look for the ham selling these antennas, please let me know. I would like to get a replacement coil. Please email me directly.

The CME from the X28 flare (4-XI-2003) has arrived at 1937Z 6-XI-2003. The deviation was a moderate 31 nT at the Boulder, CO station. We expect the Kp index to increase, possibly as high as 6. Right now, the Kp is 5. Some moderate Auroral activity might result for the next 12 hours.

NASA has been researching controlling aircraft movement for years as part of SATS (Small Aircraft Transportation System) research. There are several new jet airplanes in testing that will make this concept a reality. Part of this research is a Internet Architecture for controlling aircraft movement. This Architecture is dependent on transmitting Internet packets over Radio. This is an area that is old news to Amateur radio. I am looking for several radio amateurs with expertise in this area that would like to do some research in practical application of radio networks in communicating and controlling aircraft. Maybe we could start a company and build some valuable technology to enable this concept? Anyone with interest pls email me.

LF is defined as follows:
      30 - 300 KHz 5 Low Frequencies LF

See URL: http://www.testeq.com/charts/freqclas.lasso

To see the services there -- go to URL:
http://www.jneuhaus.com/fccindex/10_khz.html#30_KHz

Part of a spectrum allocation chart - nicely done at URL:
http://www.jneuhaus.com/fccindex/spectrum.html
Click on the color band of interest.

There was a proposal for a new LF band for USA Hams -- termed the ''sliver
band'' at 135.7 to 137.8 kHz
But last heard it has not been approved. See URL:
http://www.cq-amateur-radio.com/ZB%20July%202003.html
But It sez that amateurs may operate on 160-190 kHz under Part 15

I believe some Europeans Hams have LF experiments on 136 kHz-- see URL:
http://www2.arrl.org/news/stories/2000/11/07/2/

Also see Radio Society Of Great Britain page URL:
http://www.rsgb-hfc.org.uk/136khz_usage_guidelines.htm

Thanks for the info, seems quite interesting the stuff that is there. Might see if I can find a receiver capable of those freq's. Again, thanks for the info.

For what it's worth, RadCom, the magazine for RSGB, recently had a
special offer -- subscribe for one year for only a couple of bucks; I
sent the form in late; they still started my subscription; charged my
card less than $2 U.S. for 12 issues. The offer might still be up on
the web, somewhere.

I have a series of Handbooks on CD. Only the 2001version wants a CD in
the drive.

Is there any way to get around this. None of the others including the
new ones require it, so there is no ethics problem. Why they did this
the one year I don't know, but I do not want to have to insert a disk
every time I want to check the 2001 version. The 2002 and 2003 are

```
designed to work without the disk in the drive.

Another irritation is trying to get the older versions to work with
Adobe 6.0.  Any older Adobe compatible products should be compatible
with the latest version.  The 2003 handbook upgraded to Adobe 6.0 just
fine.

Any socially acceptable suggestions?

Amateur Radio Newsline™ Report 1363 – September 26 2003

Amateur Radio Newsline report number 1363 with a release date of Friday, September 26th 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Two more nations go code free and if you wanted to go to Albania to teach ham radio, you are to late. Find out the details on Amateur Radio Newsline report number 1363 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: TWO MORE NATIONS GO NO-CODE

Two more countries have dropped the Morse code requirement for operation on the High Frequency bands. Amateur Rado Newsline’s Don Wilbanks, AE5DW, has the details:

--

Two nations on opposite sides of the world have opted to join the growing no-code brigade. On September 15th, Ireland announced that they no longer require a Morse test. As a result, all Irish B licensees now have Full license privileges. But with a few caveats.

At this point there will be no change to existing callsigns. But Class B licensees may apply for a Class A callsign but to do so they will be required to pass a Morse test. New license applicants who have passed the Theory Test will continue to be issued with a callsign having a three letter suffix ending in B, unless they also pass a Morse Test. Also, because not all countries operating under the CEPT agreement have yet removed the mandatory Morse requirement, operation abroad on the HF Bands by Irish Class B licenses is confined to those countries that have done so.

Meantime, the Singapore Amateur Radio Transmitting Society has been advised by the nations Info-comm Development Authority that, as of the 15th of September, the requirement for a Morse code examination for High Frequency operating privileges in Singapore has been removed. And as from the 16th of September all current and future licenses became convertible to the Singapore General Class. This, with full High Frequency operating privileges.

For the Amateur Radio Newsline, I’m Don Wilbanks, AE5DW, in New Orleans.

--

By the way; Singapore is thought to be the first country in Asia to adopt the recent amendments of Article 25 of the ITU Radio Regulations. Many others around the world are expected to follow in coming days. (GB2RS, Q-News)

**

RESTRUCTURING: CQ READERS FAVOR HF PRIVILEGES FOR TECHS BUT ARE SPLIT ON CODE TESTS

A survey of CQ magazine readers shows respondents are strongly in favor of granting at least some high-frequency operating privileges to already-licensed hams who have not taken a Morse code test, but are evenly split over the question of continued Morse code exams for amateur licenses. Amateur Radio Newsline’s Mark Abramovitz, NT3V, took a look at the survey results and has more:

--

According to CQ Editor Rich Moseson, W2VU, nearly two-thirds of the CQ readers who responded to the survey favor giving limited High Frequency privileges to currently-licensed Technician Class hams who have not taken a code test. Another 36% of those responding said there should be no changes in operating privileges.

Among those who favor changes, 43% support merging the current Novice and Technician licenses and combining the privileges of both, while another 26% favor expanded privileges for both classes, including High Frequency subbands offering voice, CW and data at limited power levels. In addition, 14% supported giving Novice High Frequency privileges to Technicians, but not giving full VHF privileges to Novices. The remaining 17% were split between giving current Technicians only current Novice voice privileges and only current Novice code privileges.

Moseson says that readers were split, 50-50, on the question of whether the FCC should change its current code test requirements. Of those who favored change, 50% called for the elimination of code tests for both General and Extra Class licenses, while 42% favored eliminating the General Class code exam but keeping it for the Extra Class license. The remaining 8% supported replacing the current code test with a code recognition test similar to the exam used for the Foundation class license in the United Kingdom.

And heres a big surprise. While only half the CQ readers want the FCC to change the current code test requirements, three quarters of those who sent in the survey said they agreed with the decision at the 2003 World Radiocommunication Conference to leave the question of code tests up to each country to decide.

Finally, the ARRL and International Amateur Radio Union got a strong vote of support for the time and money they invested in securing the compromise agreement on 40 meters. One that will eventually double the size of the band for amateurs in Europe, Asia, Africa and Oceania, while removing broadcasters from the 7 point 100 to 7 point 200 MHz segment by 2009. Seventy-eight per cent of C-Q readers responding to this question said the effort was a worthwhile investment of member dues and staff time. On the other side only 9% said the benefit was not worth the cost. 13% had no opinion on the issue.

According to Moseson, a significant aspect of these survey results is that 84% of the readers responding already have High Frequency operating privileges, 75% report being active on HF, and 58% hold Extra Class licenses.

For the Amateur Radio Newsline, I’m Mark Abramowicz, NT3V, in Philadelphia.

--

The survey was included in the September, 2003 issue of the magazine. CQ Editor Rich Moseson, W2VU, said over 400 CQ readers responded to it. Moseson admits that it was in no way a scientific poll but he says that it does provide a "snapshot" of reader views on various topics. (ARNewsline(tm))

**

RADIO LAW: A BPL DOCUMENT FOR HAM RADIO

Turning to the latest in ham radios war against the introductuion of Bradband Over Powerlines or BPL, the Wireless Institute of Australia has prepared a document detailing the pros and cons. Phil White, VK2DKN, is its author:

--

White: “The purpose of the document was not only to advise the WIA of the exact position of BPL in Australia, but also to educate the general Amateur fraturnity on the situation wth BPL that was likely to affect them.”

--

White said that he tried to present a balanced view of the BPL situation, covering both sides:

--

White: “I tied to present a fairly balanced view in the document so Amateurs can see both sides of the argument. And there are some very strong arguments for and against the adoption Broadband Over Powerlines.”

--

How best to fight the introduction of this technology? White says hams need to forge alliances with others who will be affected:

--

White: “My opinion is that Amateurs need to for an associatoon wih other HF users, and those users may include people like defense, four-wheel-drive groups, CB’ers -- any people who are affected by the introductuion of BPL technology.”

--

According to White, alliances like this will put Amateur Radio in a much stronger position to gain access to any standards committees working on the introduction of BPL. (Q-News)

**

RESCUE RADIO: TEXT MESSAGE RESCUE

If you think that Morse code is still needed for a successful rescue at sea, guess again. Three men who were rescued from the hull of a capsized boat on Saturday, September 13th definately know this. You see, they were saved after one of the sailors sent an electronic text message to his father using a two-way pager.

Caught in what the British Coastguard later described as rough seas and gusts up to 45 knots, the men used a combination of a mobile phone and VHF radio to call for help. The Coastguard first received an emergency assistance request at 4:50 pm UTC but that call was dropped due to poor signal strength.

Then came a signal from an emergency locating beacon triggered by the men. It showed the vessel to be south-west of St. Catherine's point on the Isle of Wight. But it wasn't until the Coastguard received a call from one man's father - calling from his home, near Southampton - that the position was confirmed. His son had dent him a text message that he passed onytto the Coastguard. A helocopter was dispatched and the men were plucked to safety.

Commenting on the rescue, and the way text messaging can often make it through when coverage is patchy was Watch Manager Colin Griffiths. He said that the incident adds to the number of times the Coastguard has been alerted to a marine incident by just such a text message. (silicon.com via KB4KCH)

**

HAM RADIO BUSINESS: ROHN FILES CHAPTER 11

A company that literally as well as figuratively supports more ham radio antennas than any other is fighting for its survival. This as tower manufacturer Rohn Industries announces that it and five of its subsidiaries have filed for Chapter 11 bankruptcy relief in federal court.

Subject to the provisions of the Bankruptcy Code, the September 16th filing means that Rohn remains in possession of its properties and continues to operate its business. The company says that the objective of the Chapter 11 proceeding is to maximize recovery to creditors by facilitating an orderly sale of its assets. (QRZ.com)

**

ENFORCEMENT: SEATTLE CB'ER FINED FOR REFUSING STATION INSPECTION

A Citizens Band radio operator has been ordered to pay the FCC $500 for his refusal to permit agency inspection of his station. Amateur Radio Newsline's Mert Garlick, N6AWE, has the rest of the story.

--

Tacoma Washington resident William A. Woods is the CB operator in question. According to the FCC, Woods was initially fined $7000 for failure to make his CB radio station available for inspection at the request of authorized Commission personnel.

On September 3, 2002, the Seattle FCC Office received a report from the City of Tacoma, Washington, concerning complaints about interference to home entertainment equipment in the 3000 block of South Madison Street. A few weeks later agents determined that an interfering signal on 27.025 MHz was coming from Woods home. The agents also observed that the signal strength levels were significantly higher than those expected from an authorized CB transmitter.

After a second observation on November 5th, 2002, the agents, who were accompanied by two police officers, requested that Woods make his CB station available for inspection. After a delay, Woods allowed the agents but not the police officers to enter his residence. Once the agents began the inspection of the CB station, Woods changed his mind and refused to allow the examination to continue. The agents then informed Woods that his refusal to allow an inspection could result in a monetary forfeiture.

On December 30, 2002, the Seattle Office issued a Notice of Apparent Liability to Monetary Forfeiture in the amount of $7,000 for refusing to allow an inspection of his station. In his response Woods claims that the agents who came to his residence on November 5, 2002, did not present any identification and that he did not refuse to allow the agents to inspect his station. He also stated that he had taken medication before the agents arrived at his house. Woods also submitted financial documentation concerning his inability to pay the proposed monetary forfeiture. After considering his response the FCC elected to reduce the fine to the $500 level and gave Woods the customary 30 days to pay.

For the Amateur Radio Newsline, I'm Mert Garlick, N6AWE, reporting.

--

No word if Woods plans to pay the $500 fine, or file a further appeal. (FCC)

**

ENFORCEMENT: FAILURE TO REGISTER TOWER BRINGS $3000 FINE

The FCC has fined Dewey D. Lankford $3000 for his failure to register his broadcast tower. Lankford is the licensee of station WANA-AM in Anniston, Alabama, and owns that station’s antenna structure.

According to the Commission’s records, the towers height above ground is over 200 feet. On June 26, 2002, an agent from the Atlanta Office inspected the antenna structure. A recent check of the of the Commission’s tower registration records indicates that WANA’s tower still remains unregistered.

In his defense Lankford asserted that the previous owner of the station told him that everything regarding the station was “in order” and there was a “variance” regarding registration. Lankford further states that he believed, on the basis of a telegram from the FCC received by the previous licensee of WANA, that the tower was not required to be registered because it has no marking or lighting requirements.

But in imposing the fine the FCC says that Section 17.4(a) of the Rules requires the registration of antenna structures which require notice to the Federal Aviation Administration. FAA notification is required for towers whose height above ground level exceeds 200 feet. According to the Commission’s records, the height of Mr. Lankford’s antenna structure is over 200 feet. The antenna structure is, therefore, required to be registered. The FCC adds that the lack of marking and lighting requirements does not negate the tower registration requirement. (FCC)

**

HAM ENTERTAINMENT: UPDATE ON THE HUMAN RACE

Remember the proposed television show The Human Race. The one which would pit two teams of hams against one another in a race around the world? Well, the producers have announced the availability of a short video to that they have produced to accompany grant applications and have also posted it on the shows website. The mini show is an 8 megabyte file. You can download and view it
www.humanrace.fr.st or
www.qsl.net/w1zy/archive/july/video.html (Q-News)

**

NAMES IN THE NEWS: W6OBB RETURNS TO COAST TO COAST AM

Some names in the news. First up is Art Bell, W6OBB, who has returned to the radio show he made famous, but only for two days – or should I say two nights -- a week. According to an announcement from Premiere Radio Networks, Bell has agreed to replace Barbara Simpson as weekend host of Coast to Coast AM.

W-6-O-B-B began broadcasting live on Saturday night September 20th. His new version of weekend Coast to Coast AM is live from 1-5 a.m. Eastern Time on Saturdays and Sundays with a re-feed from 5 from 9 a.m.

Bell broadcasts from a studio in his home studio in Pahrump, Nevada. According to Premiere Netwoks Bell staid that for him, a return to radio is both mysterious and reassuring. (Premiere Radio)

**

NAMES IN THE NEWS: PRODUCTION COMPANY SUES WALTER CRONKITE, KB2GSD

And a Florida company has sued Walter Cronkite, KB2GSD, for $75,000. WJMK, Inc. claims that the former CBS anchorman illegally backed out of a contract to film what amounted to infomercials.

According to the Charleston Post-Courrier, Cronkite had agreed to show up for two days of taping with WJMK Inc.. This is a company which provides segments for TV stations on health care and the drug industry. Cronkite backed out in May after a New York Times article questioned whether he was being paid to help produce commercials designed to look like news.

The lawsuit was filed Wednesday September 17th by WJMK in Manhattan federal court. It claims the 86-year-old Cronkite and his production company knew his name and image could be used for any and all media. But Cronkite's lawyers insist he was misled into believing he was filming educational programming when in fact WJMK was taking money from health care companies to produce segments on their products.

As most hams are aware, late last year Cronkite volunteered his services to the not-for-proft Amarican Radio elay League as host of its new video Amateur Radio Today. As reported here on Nerwsline, that show was recently honored with a third place award at the Chicago Film Festival in Illinois. The story is in cyberspace at http://www.charleston.net/stories/092003/wor_20people.shtml (Charleston Post-Courrier)

HAM RADIO EDUCATION: ALBANIA HAM TEACHING POSITION FILLED

A follow up to last weeks story on the search for a ham radio instructor willing to teach Amateur Radio in Albania. Well, if you wanted the position and waited to respond, forget it. Word from the planners is that hey had quite a few responses. They are now assessing the candidates and the person chosen will be announced shortly.

The Albanian ham radio training course will be presented at the Technical University of Tirana in November. It is being organized in coordination with the Albanian Ministry of Telecommunications in conjunction with the IARU using Radio Society of Great Britain Radio Amateur Examination documentation. (Various sources)

**

WITH THE ARRL: 160 METER CW PRACTICE SHIFT

Starting Monday, September 29th, ARRL headquarters station W1AW will shift its 160-meter code practice and bulletin transmission frequency to 1817.5 kHz. The frequency shift not only brings W1AW's Top Band frequency in line with those the station uses on other bands, it also should help to eliminate possible interference from broadcast station harmonics and birdies.

W1AW has been conducting code practice and bulletin transmissions on its current 1818 kHz since 1982. Prior to that, W1AW transmitted both CW and phone bulletins on 1835 kHz. The frequency change is effective starting with the September 29th 2000 UTC code practice run. (ARRL)

**

HAM ANIVERSARIES: THE WS9CAN REPEATER AT 25

The Southern Counties Amateur Network Harrisburg Il. is celebrating the 25th Anniversary of its 146.880 repeater. To share his milestone the club plans to operate a special event station on October 5th 2003. W-S-9-C-A-N will oprate from 1800 to 2300z UTC on 40 through 15 meters. If you work them, Q-S-L with a self addressed stamped envelope to Vic Maue Jr., WD9EMF, RR#1 Box 102, Simpson Illinois. The zipcode is 62985. (VHF Reflector)

**

CONFERENCES: 2003 MID ATLANTIC STATES VHF CONFERENCE IN PA

Make your reservations now for the upcoming Mid Atlantic States VHF Conference, this year at the Radisson North East in Trevose, Pennsylvania. The date is Saturday, October 11th. The conference is sponsored by the Mt. Airy Radio Club and everyone is invited to attend. For more information via e-mail write to packrats_w3ccx@yahoo.com or visit www.ij.net/packrats on the world wide web. (VHF REflector)

**

RADIOSPORTS: ARDF REGION 3 GAMES THIS FALL

Planning for the 5th annual IARU Region 3 Amateur Radio Direction Finding Championships is reportedly progressing well. The games are slated to be held in the town of Ballarat Australia this November and December. To register, e-mail registration@ardf.org.au. Full details are on the web at www.ardf.org.au (News release)

**

DX

In D-X S57CQ, is very active slash YI from Iraq, especially around 14.270 MHz SSB. He expects to be in Iraq until mid-October. QSL via S57DX. (GB2RS)

And YA1D in Afghanistan is active almost daily after 1230 UTC on 80 to 10 meters. His operation is mainly on SSB but with some slow CW. (GB2RS)

Lastly, G4VGO, reports that he will be active for about two years from Singapore as 9V1GO. His activity will be mainly on the low bands on CW, especially 30, 80 and 160 meters, at his sunset and sunrise. QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: TURNING BACK THE SANDS OF TIME

And finally, we began this weeks newscast with a restructuring story and we will end it on the same note. In this case a look at some petitions for rule making that are reportedly on their way to the FCC. And when it comes to opening up ham radio to more people, one appears to want to turn back the hands of time. Amateur Radio Newsline's Bruce Tennant, K6PZW, is here with a little bit of information on two of the stranger ones being talked about in cybrspace:

--

Audio report only. Hear it by downloding the newscast at
http://www.arnewsline.org

--

Just before going to air we checked the FCC’s website and could not find a Rule Making designation for either of these. But it does not end here. More petitions, both for and against continuing Morse testing are believed in route to the FCC. (Listener reports)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. Hi,

I'm looking to buy my first portable to jump in and get my feet wet. On top of world band I'd like to try to search out some pirate stations. I am thinking of the Sony ICF-SW7600GR. I realize this isn't high-end, but I don't know enough yet to spend more. I'd like a Drake R8B, but it ain't in the cards yet... :)

I guess I'm wondering how effective this radio will be for listening to pirates. I live in NYC on the top floor of a five story building and would be able to rig some sort of antenna on the roof. Or maybe get the Sony AN-LP1

Would this be a good starter radio? Any suggestions for an antenna? Any other recommendations for the uninitiated?

Thanks!

Jon

Hi,

> Hi Jon,   your question is o.t.

Really? Hmmm, I couldn't find a specific FAQ for this group. Can you suggest
a better group?

i have a Drake r8 and am happy with
> it...know
> nothing about the sony...a lot of amateurs started out as  shortwave listeners
> (SWL)

Ah. Shortwave. Didn't know that was what I was after. I'll check out
rec.radio.shortwave.

...do not be upset with the smart arse replies that u are going to get
> from your question on this N.G.

Well, I'm new to radio... but I'm not new to usenet. If I can survive the
regular inferno at rec.photo.equipment.large-format every day, I can survive
it here too...  :)

good luck with the swl, and hope some day u
> will become a amateur (HAM) 73`s Gene WB7NGI...

Thanks,

Jon

What does a keyer do?
if I have an iambic paddle what kind of keyer would I need to use it for
practice.

In general what is the reputation of the bencher paddles easy to use?
hard to use? ?'nutter damned gadget?

Thanks in advance for your answers

A keyer has components in it that generate dits and dahs as the (key) or paddle(s) are engaged.
Most new rigs have a built in keyer. Older rigs require an external keyer.
Keyers will work with Iambic paddles or a single paddle type

Two types of operating -- single paddle and Iambic -- see URL:
http://ac6v.com/morseaids.htm#IAM
Most CW ops use the Iambic type paddles and keying.

Single paddle is press paddle in one direction -- generate dits, press in other direction generate dahs

Iambic is -- one paddle controls dits -- the other paddle dahs and also has a squeeze technique to generate dit/dahs or dah/dits depending which paddle is first engaged -- a lot more to Iambic keying -- see
http://ac6v.com/morseaids.htm#IAM

It is perhaps a little more difficult to learn Iambic keying but worth the effort.

For several brands of keys -- see Keys, Morse
http://ac6v.com/opaccess.htm

-- See Bencher, Bulldog, Craftsman, Hensley, KE6RIE, MFJ, Nye, Shurr, Vibroplex, Whiterook, CT Brand
a.. Kent Keys
a..
I would buy a Shurr if I cud afford it but got a bargain on a Bencher and it works fine.

A high end keyer is Logikey K-3 Keyer at URL: http://www.idiompress.com/

But MFJ has a selection and older used ones such as a Curtis Keyer or
Heathkit Keyers can be obtained at low cost.

I have a Bencher key and a Logikey K-3 Keyer-- works for me,
but best borrow several and try them for a few hours practice and see what
suits you.
Most Ham stores have them on demo so u can try them in the store.

I'm trying to get the Coast to Coast show, but because I'm in a highrise
surrounded by concrete, I get no AM reception. I just get static and a hum. Can
an antenna be hooked up to the radio that would end outside my window to pick
up the signal? There is also a building on one side, but it is clear for quite
a bit outside my window. Can anyone please help? Please also e-mail, if kind
enough to respond. Thanks!

Hi Sheellah,

Sure anything you can place outside would be better than what you have
now. Go to Radio Shack and get a replacement telescoping antenna for
any portable radio, attach a wire to the bottom end, then and clamp it
to the window frame or even better if you have a balcony, clamp it to
the balcony railing. Extend the antenna full length, should be better
than inside, and also makes for a quick take down if you need to do that.

JJJHS

You might want to start with a simple straight key. No keying machine
needed. Form the dits and dahs manually. And if, it turns out, you
like doing this, and your speed gets above, say, 15 words a minute, it
would be worth it to get a keyer to lessen the strain on your wrist.
No need to use a keyer on 5 wpm stuff. Just complicates things.

Bob

I'd be interested in your experience with WiFi networking and/or wireless keyboard and mouse in the shack. My shack is a high RF environment with an amp feeding an antenna tuner feeding open wire line to my doublet antenna being used on all the HF bands. I have been able to tame most of the RFI problems with a small fortune worth of ferrite toroids on all connecting wires. Too often, however, especially on the higher HF bands, the RF disrupts my router wired to the cable modem and my telnet connection to spots sources is lost. With WiFi I'll be able to separate the wired part of my computer network from the shack, but will the RF from the ham gear likely disrupt the 2.4GHz WiFi connection as well? or the WiFi sigs cause problem on the ham bands?

I think its an LTR. Any info on trunking, conventional, or use as a 902
rcvr would be great. Powers up and appears to have 3 modes in it. Can't
find much on the web.

Hi,

I've been told there's a guy by one of these names (or possibly something else very similar) who maintains a website with some very useful info on practical matters of an electronics/radio orientated nature. Can anyone confirm a name or even provide a link to his site?
thanks.

Hi all,

Screw electronics for a minute.
Who would you say is the ugliest bastard currently performing in rap music? For my money, Ja Rule takes some beating, with a face that closely resembles a female baboon's arse (in season). But not being over familiar with these so-called "urban artists" I could easily be wrong and he could possibly now have been surpassed. Any other nominations, gentlemen?

Well, quite. Or Led Zepplin, of course.
Anyway, to get back on-topic, I have now discovered a rap artist that's at least as dog-ugly as Ja Rule. His name's "Fifty-Cent" and it turns out he was shot 9 times (including once in the head) whilst he was sitting out on his grandma's front porch one day, minding his own business, smoking crack. "There is a God!" I hear you music lovers cry. But no - he survived and is now a real big seller. He's even

cashed in on the shooting by marketing his own brand of T-shirts which
have blood-stained bullet-holes emblazoned on them!
Only in America.
:-)

What the hell is metaphysical about this question? And where is the
conumdrum?

Much more of this linguistic vandalism, and your thesaurus will be
broken over your knee and you will be confined to posting in
Serbo-Croat.

There is no such language, Bill, as a gentleman of one or the other
persuasion once forcefully informed me.

Best regards,
Spehro Pefhany

Yep.And Hini and Urdu are two completely different and mutually
unintelligible languages.

Rabid nationalists can be relied on to forcefully inform you of every
such politico-linguistic distinction. They are the John S. Dysons of
linguistics.

You post a cliche question, which has a cliche answer, and you want me
to "reason something out". You've just had an "informed" opinion of
your "metaphysical conundrum" and now I've got spoon-feed you the
information on which it was based (as I've done in the other post).

Couldn't you just read a newspaper from time to time? That way you
might be able to winnow your harvest of original ideas down to the
ones that journalists don't trot out every few years.

The thread was www.shameonieee.org, it is article 30 in the thread and
the time-stamp is 2003-10-03 16:46:51 PST

Since your "metaphysical conundrum" was typical newspaper-level tripe,
your claim to superiority rings hollow.

Sloman, you have continued to demonstrate your inability to communicate on a civil level. Just because someone disagrees with you, it doesn't make them 'on the wrong side.' Your apparent inability to reflect on your self and ideas shows an arrogance that is too common on the far-far lunatic left. If you were only a 'leftist', then it would be sad that you cannot communicate more kindly.

Since you are just a lunatic, then your inability to be kind causes no loss.

John

Has anyone successfully uploaded a log file to LoTW with PSK31 being used as the mode. Have tried, using the latest software version and when it is trying to create the upload file it chokes on the QSO's with PSK31 entered as the mode. Give me an error message stating line number and the fact that the mode PSK is not recognized.

Any ideas?

Sam

Well if you'd posted the message ID as I requested, it would have
saved me some messing about, but I eventually found your post, dated
the *4th* actually, since your adopted country, though exemplary in
most other respects, has yet to adopt UK time.
Anyway, your explanation is probably correct, for which I respect you.
Unfortunately, we see the usual barbed, personal insults that
characterise your contributions here. Small wonder you've made
yourself so reviled in this medium.

I can - and frequently do - communicate at a civil level. My response
to Paul Burrige is not particularly civil, but the level of incivility
was based on the incivility of his comment, and was intended to echo
it pretty much exactly.

> Just because someone disagrees with you, it doesn't make them 'on the wrong >
side.' Your apparent inability to reflect on your self and ideas shows an
> arrogance that is too common on the far-far lunatic left. If you were only > a
'leftist', then it would be sad that you cannot communicate more kindly.

I can communicate more kindly - and usually do. I do make a policy of responding to insults with more or less proportionate insults. If you can't detect the insult in Paul Burrige's line above, you've got a comprehension defect, similar to the one you exhibit in your appreciation of Rush Limbaugh's comments on Donovan McNabb

> Since you are just a lunatic, then your inability to be kind
> causes no loss.

Your opinion of my sanity is noted. My opinion of your cognitive defects has been posted here from time to time. Somehow, I can't take your opinion seriously enough to take a walk up the road and have myself voluntarily committed to the local psychiatric hospital.

You probably wouldn't benefit from a similar course of action - there isn't anything much a psychiatrist could do to help your defects, and while you could do with developing some kind of insight into your weaknesses in cognition, the nature of the defects most likely makes this impossible.

You are seldom kind to me. You make it IMPOSSIBLE to
come to terms and to develop concensus.

It is clear (in these discussions) that your ability to
be civil is limited to when you agree on a subject. I have
seen too much narrow minded judgement from you. If you
consider my comments about you being far-left wing as
being an insult, then you need to reconsider your own
belief system. You shouldn't take the fact that you
appear to be far far left wing as an insult, unless that
revelation causes you discomfort. The strength and
focuse of your opinions tends to show an intolerance and
inability (or unwillingness) of self-reflection.

The problem with ALOT of left-wingers (and you appear to
be inflexible kind) is that they are often more
CONSERVATIVE and INTOLERANT than some of the most
vehement right-wingers that I have been exposed to.

My own view of your lack of vision and perhaps even
intellect is strengthened when your response to a disagreement
is to call someone stupid. In your case, you might
just be very poorly informed, and your thinking just
might result from too much dishonesty in the European

press and perhaps peer pressure (mutual cultural agreement) that results from the lies that you seem to base your beliefs/thinking on. You might really just be a victim resulting from the facts and propaganda that you have been exposed.

I did quit giving you the benefit of a doubt, but if I see signs of better knowledge of reality (and not theory from propagandists), then I can welcome enjoyable conversation with you. Some of my best friends had resulted from initial mutual hatred (or dislike.)

Of course, I am open minded and not afflicted with the inability to change. Being critical of the left doesn't result from being 'right wing' but a rather careful centrist who resists peer pressure and distortions.

John

None of the people who had answered him seemed to meet the criteria
that you suggest. Perhaps your own criticism shows a need to
compensate.

I agree that speaking for others isn't a good thing, but your making
incompetent judgements about others doesn't help your position
or further the discussion.

Are you looking at the right person? He appears to be quite handsome. As for the music- rap is something you have to acquire a taste for, and maybe drugs help to look at the crowd- the music is quite energetic if not violent and the message is usually bluntly put. Most people who listen to it directly have the volume cranked to 500 Watts output power- rattling windows on all the nearby structures- clearly a type of music that is extreme. Try turning the volume way up and see if that helps.

> You are seldom kind to me.

You may not be aware of this, but your reactions tend to include
insulting ad hominum comments. I feel no obligation to tolerate this
from you, though I have been known to tolerate it from people who
advance arguements of some substance.

> You make it IMPOSSIBLE to
> come to terms and to develop concensus.

With you, it would seem to be impossible.

> It is clear (in these discussions) that your ability to
> be civil is limited to when you agree on a subject.

I can be positively obsequious when someone proves me wrong. It doesn't happen often, but search under "it isn't what you don't know that trips you up, but what you think you know that ain't so". On that basis, of course, you owe me big-time.

> I have seen too much narrow minded judgement from you.

Right. I narrow-mindedly disagree with you right-wing fantasies, and adduce inconvenient facts.

> If you consider my comments about you being far-left wing as
> being an insult, then you need to reconsider your own
> belief system.

One of us does. Yours seems to be based on a number of false-to-facts propositions,so your data-base could do with an over-haul as well.

> You shouldn't take the fact that you appear to be far far left wing as an
> insult, unless that revelation causes you discomfort.

That I appear far-left wing to you is scarcely a revelation, but from where I sit, the political spectrum includes nitwits who are as far out to the left of me as you are to out the right. Some of them have assailed me for my right-wing attitudes, but that was back when I was an active - if very low level - member of the U.K. Labour Party.

> The strength and focuse of your opinions tends to show an intolerance and
> inability (or unwillingness) of self-reflection.
>

> My own view of your lack of vision and perhaps even
> intellect is strengthened when your response to a disagreement
> is to call someone stupid.

I don't call Fred Bloggs stupid, because while he holds some ideas which are mostly endorsed by very stupid people, his reactions in general are those of an intelligent man. Where simple stupidity is the most probable explanation of a disagreement, I'm not so inhibited.

> In your case, you might
> just be very poorly informed, and your thinking just

> resulting from the facts and propaganda that you have been
> exposed.

I have been exposed to a lot of lies and propaganda - I read the

Reader's Digest until I was about fourteen and began to develop the
capacity to detect misleading propaganda - and I am sensitive to it,
and (as far as I know) reasonably competent at detecting it.

This attempt to recycle my criticisms of your over-simplified and
ill-informed world view is perhaps ecologically sound, but requires
rather more factual support than you seem to be able or willing to
deliver.

> I did quit giving you the benefit of the doubt, but if I see
> signs of better knowledge of reality (and not theory from
> propagandists), then I can welcome enjoyable conversation
> with you. Some of my best friends had resulted from initial
> mutual hatred (or dislike.)

So e-mail me the name of a book (plus author and ISBN) that I can get
from amazon.com or or amazon.co.uk, and which will improve my
knowledge of your reality, and I'll reply specifying a book that
should improve your knowledge of my reality, and we'll see what we
both make of them .... I post under a real e-mail address.

> Of course, I am open minded and not afflicted with the
> inability to change. Being critical of the left doesn't
> result from being 'right wing' but a rather careful
> centrist who resists peer pressure and distortions.

We do seem to have rather different ideas of where the centre is.

Battery matching.

Here is how I would go about it. Charge the cells individually untill their voltage starts to drop, aka. peak charge them. Measure the peak

voltage. Then hook them to a fixed load and measure their discharge
time to 0.9V. Let the cell rest. The next day repeat. Take the
measurements and compare close discharge times and close peak
voltages. If you could measure internal resistance it would be nice,
but I don't know of a simple way. In my opinion the important
qualities are.
1. Close discharge times
2. Close and low internal resistances
3. Close peak voltages

With out doing the math, I'd bet the HT has a stronger signal level
against the side of your head than a KW at 10 feet.

Any one care to do the math?

The internal resistance of the battery changes as the battery is discharged.
Also things like temperature, age and other factors effect it.
I think the proper way to test your battery is to fully charge it to the
manufacturer specification and discharge it at a given amp hour rate.
Compare your discharge curve with the manufacturer. Choose the same
discharge rate that the manufacturer does btw. If your curve is a little
less than what the manufacturer says then your probably ok. If it is much
less then you need a new battery.

Amateur Radio Newsline™ Report 1360– September 5 2003

Amateur Radio Newsline report number 1360 with a release date of Friday, September 5th 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Pro-code fights back. A petition to retain Morse code testing is filed with the FCC and others are reportedly on the way. Find out the details on Amateur Radio Newsline report number 1360 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: PRO CODE PETITION FLED WITH THE FCC

The proponents of retaining Morse testing for all candidates for a United States Amateur License with high frequency operating priveleges are striking back. This, with a petition that not only asks the F-C-C to retain the 5 word per minute C-W exam, but to also require that Extra class pass a 12 word per minute test. And the organization that I sponsoring the measure also wants written exams stiffened as well. Amateur Radio Newsline’s David Black, KB4KCH, has more on this attempt to row against the deregulatory tide:

--

For the past couple of months, more and more countries have been steering toward making amateur radio code-free. That follows the July abolition of Morse code testing by the World Radiocommunications Conference. In the United States, the Federal Communications Commission has before it six petitions essentially seeking to remove Morse code from amateur radio in the U-S. Supporters of the code have been quiet--until now. A group called FISTS--said to be the largest code advocacy organization in the world--is leading an effort to make Morse code a more prominent part of ham radio and the licensing process.

FISTS is an international Morse code preservation society based in the United Kingdom with chapters world-wide. Its stated objective is to further the use of the Morse code in Amateur Radio communications. The group's north American chapter has delivered a detailed rule-making request to the FCC that seeks more than just making sure that Morse code testing is retained.

FISTS asks the Commission to raise the standards in other areas of testing, too. Nancy Kott, WZ8C, is U-S Chapter Manager for FISTS, and is Editor of Worldradio Magazine. She wrote the rule making request. Among the proposals are keeping code as a mandatory testing element for the General and Extra class licenses. General licenses would require 5 words per minute and Extra class licenses would require 12 word per minute code proficiency.

FISTS says passing a 5 word per minute code test is no hindrance to people wanting to upgrade, and cites the large number of Technician class operators upgrading to General as proof.

FISTS also says that those aiming for the Extra license should be able to demonstrate Morse code skill at 12 words per minute.

Today's written exams are too easy. At least, that's what FISTS seems to suggest in noting that the FCC sought comments before amateur radio's restructuring about whether fewer morse code requirements should be offset by increased technical content on written questions. FISTS notes that nearly every commenter said yes, but the Commission's Report and Order failed to address the issue.

FISTS says the commission has a chance now to make General class written tests equivalent to the Advanced class written tests before restructuring. In other words, go back to the way it was, with tests that are harder and more thorough.

FISTS wants the Extra class exam to be more thorough, as well. It wants the FCC to require written knowledge of circuit design, information theory, digital methods and encoding schemes and software radio. FISTS says candidates for the Extra class ticket need to show a more thorough knowledge of propagation and geophysics than current tests require.

For the Technician class operator, FISTS suggests merging the Technician and Tech-Plus classes and not require a Morse code exam. But FISTS says technical content should be emphasized and should include the digital modes. FISTS advocates extending Technician Class privileges to include digital modes within the current Novice subbands, which it says should be kept. The group says that would let Technician Class operators participate in the explosive growth in digital applications occurring within the Amateur Radio Service on the high frequency bands.

But when it comes to giving Technicians even limited phone privileges on HF, FISTS says no. The group says the rush of upgrades by Technicians to higher classes following restructuring indicates that the barrier between General and Technician classes has already been lowered enough without needing to go any further.

FISTS also suggests one other big change and that involves taking license tests. Right now, if you fail an exam, you can go back and try again at the same session. FISTS is asking the Commission to impose a 24-hour waiting period before being able re-take either a failed written test or a failed code test.
For the Amateur Radio Newsline, I'm David Black, KB4KCH.

--

There’s 14 pages to the FISTS filing. You can read it on-line at ftp://ftp.qsl.net/pub/n1ea/FIST_FCC_Petition_8-30-303.pdf. As we go to air, no Rule Making designation has been assigned to the FISTS request.

RESTRUCTURING: ACA PAPER SUGGESTS TOTAL RESTRUCTURING OF VK HAM RADIO

Meantime, down-under the Australian Communications Authority has surprised that nations ham radio community with a proposal to totally restructure that nations Amateur Radio service. Jim Linton, VK3PC, has the rest of the story.

--
Radical changes are being proposed for the Amateur Service in the just issued ACA discussion paper entitled "A Review of Amateur Service Regulation.” The paper is sure to stimulate debate, particularly its reference to interference experienced by domestic television and radio receivers, and a suggestion that radio amateurs should take full responsibility to resolve these problems.

A major purpose of the paper is to discuss the implementation of the changes arising out of the World Radiocommunications Conference held in Geneva this year. These changes include the end of mandatory Morse code tests for amateur licences, amateur callsigns, third party traffic, communications during disasters, and reciprocal and visitor licensing.

The ACA, as expected, has also taken the opportunity to discuss restructuring of amateur licensing, the regulatory controls and administration of the Amateur Service in Australia. The paper acknowledges the WIA's proposal for a new entry level licence, and the potential for it to replace the current Novice licence. It discusses restructuring of the current system of seven different amateur licence types (five operator, plus repeater and beacon), to create only two operator licence types - Unrestricted and Novice.

On a positive note the paper hints that the removal of Morse code tests for amateur licences may occur earlier than the ACA's current timetable. It states that if there is sufficient public support, the code requirement could be removed prior to its proposed implementation of regulatory changes flowing from its discussion paper in early 2005.

In a controversial proposal, the ACA is to consider the introduction of a "no interference" policy for radio amateurs. It states "The operation of an amateur station, which is essentially a hobby, should not disturb another person's activities, such as television viewing or radio listening, or affect commercial activities." Should the "no interference" policy be introduced, it would be a major shift from the current ACA policy that provides for a shared responsibility between the radio amateur and his neighbour for the resolution of an interference problem.

To make it clear, the ACA explains "This would mean that an amateur must not cause interference to other radiocommunication services. If causing interference to another service, the obligation will be on the amateur to resolve the problem."

--

The Australian Communications Authority has set a deadline of October 31st as the last day for hams to file responses to its discussion paper. The 50-page discussion paper can be downloaded from www.wiavic.org.au/news or www.wia.org.au/vk4 (Q-News)

**

RADIO LAW: THE ACADEMY OF MODEL AERONAUTICS SAYS NO TO BPL

Back here in the United States, word that the Academy of Model Aeronautics is saying no to the introduction of Broadband Over Powerline or B-P-L technology. In Reply Comments to the FCC, the 175,000 member aviation hobby group says that it is concerned that B-P-L deployment could cause harmful interference to users of Radio Controlled systems and pose a safety hazard to aeromodeling equipment and spectators.

In its filing the A-M-A says that Broadband Over Powerline holds the potential to severely interfere with radio controlled models which operate in or near the 27, 50, 72 and 75 MHz bands. All of these fall within the 1 point 7 through 80 MHz spectrum where the FCC proposes to permit B-P-L to operate.

To the A-M-A this means that Broadband Over Powerline may not yield the benign environment the Commission expects. Also, that it could result in an unanticipated negative impact on Radio Controlled operations. And that's what it has told the FCC. (AMA release)

RADIO LAW: MARYLAND COUNTY FILES RFI CONTROL APEAL TO FCC

Still with regulatory news, the CGC Communicator reports that Anne Arundel County, Maryland has filed an Application for Review before the full Commission. This, in the hope of reversing an order by the FCC's Wireless Telecommunications Bureau that prevents the County from entering into the radio frequency interference control business through zoning laws. Laws that could even impact on ham radio, C-B and GMRS operators.

In 2001 Anne Arundel County, Maryland, had enacted legislation requiring that, prior to receiving a County zoning certificate, owners and users of any sort of telecommunications facility had to show that their installation would not degrade or interfere with the County's public safety communications systems. The ordinance also permitted the County to revoke a zoning certificate where degradation or interference was found.

Alarmed, telecommunications providers took the ordanance to the FCC asking that it be overturned. Last July it did just that. It In considering the case, the Commission found that the challenged provisions of the Anne Arundel County zoning Ordinance infringe on the Commission's exclusive jurisdiction over RFI and are preempted under the doctrine of field preemption. Now the county is upping the antie.

In its pleading, Anne Arundel County maintains that reversal of the Bureau's decision is required because the Order conflicts with a controlling statute of the Communications Act. The County further states that, pending implementation of the Commission's 800 MHz proceeding, the Bureau's decision leaves public safety systems of local governments such as the County's vulnerable and powerless to deal with what it terms as -- quote: “ potentially deadly radio frequency interference from wireless systems of commercial mobile radio service providers operating in the 800 MHz band.”

The FCC has invited comments on this matter by September 26. More is on-line at the U-R-L featured in this weeks Amateur Radio Newsline printed report.

(DO NOT READ: The complete story in the the FCC website at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-03-2734A1.doc) (CGC)

**

RESCUE RADIO: CELL PHONE HELPS RESCUE FCC OFFICIAL

A cellular telephone has helped to rescue two men dangling in a gondola buffeted by severe winds near Aspen Colorado. One of them is the chief of the Federal Communications Commission's Wireless Bureau who turned to the phone during an ordeal where he was trapped for more than two hours. Amateur Radio Newsline’s Bruce Tennant. K-6PZW, reports:

--

According to news reports John Muleta leaned on the technology he oversees when he and Robert Pepper, an adviser to FCC Chairman Michael Powell, got stuck in the gondola on Monday, August 19th. The two men had used a break in a telecommunications summit to take in the view from atop of 11,000 foot Aspen Mountain.

Their sightseeing trip turned into an ordeal when the tram service abruptly shut down during their return. It stranded Muleta and Pepper n the enclosed gondola part way down the mountain. When help was slow to arrive, Muleta used his cellular phone to call for assistance. But the local service provider provider apparently did not have the latest "enhanced" 911 technology and could not locate him precisely. So Muleta simply directed the rescue effort over the phone.

Once off the mountain Muleta told the press that he was very happy that he had remembered to carry his cellular telephone with him. He added that had he not, that it would have been a much different scenario. This, if they had been trapped all night with the weather getting getting colder.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

Ironically, just before he left for the trip Muleta told an interviewer that the FCC is looking at ways to accelerate the deployment of Enhamced 911 service. This is the system that uses G-P-S technology to more precisely locate callers. (Published News Reports)

**

ENFORCEMENT: INTERNET SALES BRING LETTER OF INQUIREY

The FCC has sent a letter of inquirey to Randy Owen, N9UOM, of Toma Wisconsin regarding his license renewal application. The Commision is asking Owen about his apparent involvement in the sale of non-certified C-B transcievers and non-certified High Frequency amplifiers over the Internet in 2002. Owen is the owner of Roper Electronics whose website was advertising the merchandise for sale. (FCC)

**

ENFORCEMENT: FORMER HAM WARNED NOT TO CONTACT THE FCC

A brefly licensed former ham has been told not to call the FCC and wait for it to contact him. The agency's Daryl Duckworth, NN0W, explains:

--

(Duckworth) "Jack Gerritsen of Bell California has recieved a warnng notice about a violation of ex-patrte rules after his license had been set aside. His repeated calls to the offices of Administrative Law Judges is a violation odf the Commission's rules against ex-parte communications. Ex-parte rules place restrictions on contacts with Commission decision making personel."

--

Gerritsen's license and KG6IRO call sign were set aside only days after they were issued back in November of 2001. This after the FCC learned that he had been convicted in California state court of a radio related offense. It also recieved complaints alleging that Gerritsen had been on the ham bands prior to recieving his license. (FCC, RAIN)

**

NAMS IN THE NEWS: 9M2TO WINS UKDXF AZWARD

Some names in the news. The Chiltern DX Club of the U-K DX Foundation has awarded its prestigious 'Local Heroes' Award for 2003 to Tex Izumo, 9M2TO. The club's awards committee recognized the commitment Izumo has shown in providing many contacts and confirmations with amateurs world-wide on all bands from 160 to 6 metres over a period of many years.

This annual award goes to an operator resident in a DX country who has provided excellent service to the DX community and who maintains a high standard of operating without the benefit of major sponsorship. The award carries a cash prize and a year's honorary membership in the Chiltern DX Club. (GB2RS)

**

NAMES IN THE NEWS: HAM APPEARS ON TV MOTORCYCLE SPECIAL

Bob Mastrangelo, WA6ZTA, of Thousand Oaks Californis reports that he recently participated in the filming of a motorcycle special that aired August 28th on The Travel Channel. The show is called Revolution on Wheels, and Bob is seen in the beginning riding his yellow Honda Gold Wing and is interviewed about 25 minutes later. Since The Travel Channel does repeat these programs, check local listings to see when it will air again and keep an eye open for WA6ZTA. (ARNewsline(tm))

**

NAMES IN THE NEWS: KB4KCH NEW VP OF ARNEWSLINE(TM)

The Board of Directors of the Amateur Radio Newsline has confirmed the appointment of David Black, KB4KCH, of Helena, Alabama, as its Vice President. Black, whom you heard earlier in this newscast will fill out the unexpired term of Roy Neal, K6DUE, who died last month following heart valve surgery.

David Black, KB4KCH, is owner First Frame Video in Birmingham, Alabama. He is also a 20-year veteran of the broadcast television industry. Prior to starting First Frame Video, David worked as a television news reporter and weather anchor at WVTM, the NBC affiliate serving Birmingham, Alabama. KB4KCH also has extensive radio and television experience while working in broadcasting in Texas.

In addition to his reporting and anchoring Amateur Radio Newsline for well over a decade, KB4KCH is active in amateur radio Skywarn and emergency communications. He is past President of the Birmingham Amateur Radio Club and is one of the founders of ALERT Alabama. This is an organization of radio amateurs specializing in Skywarn communications to assist the National Weather Service in the Birmingham area. (ARNewsline (tm))

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

VOLUNTEERISM: HCI NEEDS VOLUNTEER SCHEDULES EDITOR

If you are a Shortwave Listener, live on the West Coast and want to edit an S-W-L newsletter, listen up. This one is for you.

Duane Fischer who heads up the Hallicrafters Collectors International needs a volunteer editor who can post the annual schedules of worldwide Shortwave radio stations. The site, located in cyberspace at www.w9wze.org/SWL contains loggings, current news, tidbits and program schedules. If you would like to become the Schedules Editor, please contact Duane as soon as possible at dfischer@usol.com and tell him you heard about it on the Amateur Radio Newsline. (ASWLC, WDX6AA)

**

HAM RADIO IN SPACE: ARISS PACKET UPDATE

An update to last weeks story on the wayward packet radio system on board the International Space Station. Those of you who were on the air on Sunday, August 24 are aware that the packet system was re-activated around 12:00 UTC. Shortly thereafter, the ARISS team received reports from the general ham community that the packet system was operational.

Over the next 9 hours, many hams around the world sent digital signals through the packet system. But later that day, at around 21:22 U-T-C, the packet system abruptly stopped operating while traveling over the Western part of the U.S.

According to AMSAT’s Frank Bauer, KA3HDO, the ARISS team has had several discussions on next steps to get the system back up and running properly. But it may be some time before this can be accomplished. This is because the debug efforts may be delayed further due to the arrival of the Progress 12P re-supply ship which will be keeping the two man crew very busy.

Once time is available, the plan is to have the crew report out on the status of the packet module and then to recycle the power. This should bring the packet system back up. If the system abruptly shuts down again after a few hours the ARISS team will then ask the crew to attach a computer to the packet module, download the current parameters to the ground and reset the module.

Stay tuned. ARISS promises to pass along word of progress as it happens. (AMSAT, ARISS)

**

INTERNATIONAL - AUSTRALIA: NEW BANDSPACE FOR VK HAMS

On the international beat, word than all-Australian radio amateurs will be allowed to operate between 3.776 and 3.800 Mhz effective from the 1st of January 2004. The move follows a proposal put to the Australian Communications Authority by the Wireless Institute of Australia several years ago. (GB2RS)

**

INTERNATIONAL - WORLDWIDE: LIGHTHOUSE WEEKEND A BIG HIT

Meantime, reports from the around the world indicate that there was allot of activity in this years International Lighthouse and Lightship Weekend operating event. Jeramy Boot, of the GB2RS News Service has the details:

--

Mike Dalrymple, GM4SUC, the organiser of the International Lighthouse / Lightship Weekend reports that a record number of stations - 369 - were established at lighthouses and lightships in 48 countries - another record - over the weekend of the 16th and 17th of August.

The official list of participants can be found on the ILLW website. Next year the event will be on the 21 and 22nd of August 2004, and Mike invites individuals and groups to join in with a weekend of enjoying radio from a lighthouse or lightship.

Jeramy Boot, G4NJH

--

The International Lighthouse website is in cyberspace at http://illw.net. GM4SUC adds that as soon as you have your plans for participatiin in the 2004 Lighthouse Weekend made to let him know. You can contact Mike by e-mail to GM4SUC@compuserve.com (GB2RS)

**

DX

In D-X, word that IN3VZE will be active once more as 7Q7CE from Malawi through the 21st of September. QSL as directed on the air. (GB2RS)

And the K3EOD Contest Team will be active in the September VHF UHF contest September 13th to the 14th. The group consists of W3EFH, K3EGE, WR3P, W2SJ and K3EOD. They will be on all bands from 6 meters RF through visible light using SSB, CW and laser communications. For more information please e-mail k3eod@juno.com (VHF REflector)

Lastly, HL1IWD reports that he will be visiting Honolulu through the 12th of September, and will operate as KH6 stroke KB1AIM on 20 metres, mainly CW. QSL is via HL1IWD. (Modern DX)

**

THAT FINAL ITEM: NO MORE USE OF THE WORD E-MAIL IN FRANCE

And finally this week, a note from France where the governmet has said goodbye to the term e-mail in favor of the native language term courriel. A word that linguistically sensitive France is now using to refer to electronic mail in all official documents and hopes that the public will adopt as well.

Frances’ Culture Ministry announced a ban on the use of e-mail in all government ministries, documents, publications or Web sites on July 18th. This, as the latest step to stem what it sees as an incursion of English words into the French language.

Courriel is a contraction of the two words and is a term that has often been used in French speaking Quebec Canada. The ministry's General Commission on

Terminology and Neology insists Internet surfers in France are broadly using the term “courrier electronique'' instead of e-mail - a claim some industry experts dispute.

And we thought that you would like to know! (Published reports)

I just acquired an aea pk232mbx at a hamfest here in mena. I opened the box
when it did not power up and noticed a burned(resistor or diode) not sure
which. the manual that the
guy included was for a pk88(with a cover for the pk232). I am in need of a
schematic
for this pk232, particularly concening what is burned so that I may fix it.
Please e-mail me with info or a scanned pic to kd5pvh@arrl.net
thanks in advance.
73
james

I have from an estate a TR7400A with the original manual and mobile mounting
bracket. I do not have the mic with it (needs 4 pin). Id like $30.00 for it.
Its a very solid unit but not mint. Thanks and pic at

the priceline is your limit.

You could even go with LMR-400-75

cost you about a buck a foot tho, maybe more.

HI, I,m about to buy 2 way GMRS Radios. I need them for Air Soft Gun
games (kind of paintball) and snowboarding with my friends.
Most important thing for me are - VOX - i need to have free hands when
shooting, chanell encryption and at least 5 miles range, so i could
easily comunicate on the slopes in one valley. I was thinking about
Motorola's Talkabout T5620, are they any good?

"Joshua K Drumeller"
> ...MPE calculations for radios that
> transmit above 50watts for mobile radios?

Canada just happens to be a world leader in this field. The body of knowledge is summed up quite nicely in Health Canada's 'Safety Code 6'.

www.hc-sc.gc.ca/hecs-sesc/ccrpb/publication/99ehd237/toc.htm

More links:
www.google.com/search?q=health+canada+safety+code+6

In general, if your 2m antenna was mounted on the trunk lid and someone was sitting in the back seat and you transmitted 50 or 75 watts for the full six minute averaging interval, you might be in a situation where you'd be in excess of the guidelines. In other words, your passenger's head might get slightly hotter than recommended. With a top mounted (VHF) antenna, there is not likely to be any problem - but who knows without checking... You're in the nearfield and that complicates things...

The whole RF Safety field is still somewhat immature (IMHO).

Hello, I am looking for either a copy of the instructions for this keyer, or the following information:
There is a coaxial power plug on the back. I assume it takes 9-12 V (can someone confirm that). Also, what is the tip polarity?

Forget the Motorola 5620 if you need 5 Miles, Motorola says this radio will give you "UP TO" 2 Miles. The next step up Radios will give UP TO 5 Miles not at least 5 miles. As for Encryption, forget it, do you mean CTCSS? That radio will give you 38 Tones, so that only you and your buddies will hear each other, unless someone else is on the same channel with the same code.

You ARE aware you'll need a License for GMRS from the FCC, right?

FS: CABINET
I have a grey wrinkle cabinet (Not sure of manufacturer...Bud? Collins?), measures 21.5"wX15"DX14"H, and has louvres on sides and back. Back also is open, bottom 19.5"x3". Cabinet has flip-open top, and is drilled/threaded for 19" rack mount equipment. Front trim of red-lined chrome, top lid has round chrome hardware handle. Cabinet is in pretty decent shape viewed from front/sides. Top has some stains, grunge, and about 1 sq. in. of chipped paint but will clean up OK. Purists will want to repaint. $95 plus shipping. Can send photos. Tnx & 73

Hi Folks:
A buddy of mine in the RF field of the military use to stand in front of microwave satellite transmitting dishes to keep warm on the really cold days. He said you, "..feel warm all over!". Sounds nuts! Today he's well over 80 and still cuts his own grass.. Must be OK..
Harry

Down the road I would like to get into ham radio after I get my license. I live in a very populated area with tough zoning requirements. Can I still operate my radio without a directional antenna (Beams) but with a omni type antenna?

Thank you,

Dave

Stealth Amateur Radio
-- Operate From Anywhere
by Kirk A. Kleinschmidt, NT0Z.
Adventure into the world of hidden stations and invisible antennas! Set up and operate a station without calling attention to yourself. Successfully

operate a low power (QRP) station. Install safe antennas, including indoor antennas. Build invisible antennas. Install and operate a mobile station, to "get away" from radio-forbidden locations. Operate a portable station from a campground, motel room, picnic area, mountaintop or other location. Handle interference from your station to nearby consumer electronics devices as well as to your station from other nearby devices. Use this book and enjoy operating from just about anywhere!

Some hams have HF mobile antennas -- HOA's can't touch these

There are many different ways to operate in ham radio, over 15 bands
from 160 meter to VHF to UHF to microwaves, and many different modes.
Many of these will allow operation with minimal visible antennas.

Yes, there will be some parts which will be difficult, but a little
ingenuity and elbow grease will make more things possible.

Happy trails,
Gary (net.yogi.bear)

The problem is, no one really knows what is safe and what is not...Unless it is doing obvious damage.

With a 2-meter mobile I'd not worry a bit running 160 to 320 watts to the antenna. Standing beside the car should be no worse than using an HT with the antenna against the side of your head.

Dave:

Wander on over to the hobby...lots of fun, tho you may encounter a few "interesting" folks (esp. here on the newsgroups...put some folks in front of a computer....). As for operation, I live in a "CC&R" neighborhood (supposedly no external antenni...tho I do have a 6M omni loop on the chimney). You have several possibilities...QRP or low power operation, normally using wire antennas (magnet wire is just about impossible to see, makes great QRP antennas), attic antennas if you have access to attic space (I've got 2M and 432 mhz beams in my attic, as well as a wire dipole for HF) and vertical antennas (normally used on FM modulated signals...i.e., repeaters on 6M, 2M, etc, as well as on HF). All have their advantages and limitations.

There has been quite a bit of experimentation on different ways of radiating a signal from apartments, etc (antennas mounted on balconies, using gutters and downspouts as antennas w/help of an antenna matching device..a.k.a. "antenna tuner", etc). There is a book dealing with "stealth" antennas. Believe it is put out by the ARRL.

Check around and see if you can find a local amateur radio club. They may be able to help out, and you may discover several amateurs in the same neighborhood. My antennas are so well hidden that the neighbor never realised I was a ham until he saw me testing a 6M Jpole one day...and he came over and introduced himself with his callsign! Turns out we had chatted several times, but didn't realise we were neighbors until that day. Stealth antennas DO work.

Get your ticket, hope to hear you on the air.

Cheers!
A

HFpack is an international resource for portable High Frequency communications.
http://www.hfpack.com

HFpack provides an information exchange about transceivers, antennas, systems, packs, propagation, new developments and techniques in HF portable operation. The HFpack egroup and on-the-air schedules are active with amateur radio around the world.
HFpack membership is free and open to all radio operators interested in HF Portable.

HFpack Calling Freqs 5371.5kHz-18157.5kHz-14342.5kHz USB

HFpack is the result of a new type of group developed on-the-air and over the internet. The HFpack e-group is a moderated discussion group primarily utilized by amateur radio operators who are interested in HF portable communications and equipment. Subscription and "membership" in the HFpack e-group is free. It is currently active using the Yahoo groups server system, where it can be read and posted to via the web, direct email, or email daily digest modes. Participants in the HFpack e-group observe friendly cooperation and good netiquette. HFpack also maintains HFpack Hall of Fame, the amateur radio Pedestrian Mobile and Human Powered Mobile world record database.
HFpack is all about...
High Frequency Portable transceivers and antennas. HF SSB/CW/Data. Amateur commercial marine. Handhelds backpacks, carry-ons, manpacks. Pedestrian and Human Powered Mobiles. Manual and automatic antenna tuning. Telescopic tape folding and collapsible antennas, dipole, broadband hf vertical antennas. Battery solar crank alternative energy power supplies. Compact lightweight miniature equipment. Handsets headsets microphones earphones keyers. Low power TX/RX techniques. Portable amplifiers. Hiking camping bicycling kayaking and expeditions.

Just been assigned some new bands, and groups are already trying to hog them up.

Anybody know the status of the packet system?
Got up early this morning for a pass between about 5:45 and 6:00 AM,
and never heard anything. Antenna design spec'd at 7db gain.
Actually, around 145.825, I thought I heard some faint packet, but it
was gone pretty quickly.

Have not seen any thing on AMSAT.org about the Packet system being back on at ISS. You might have heard NO-44 (PCSAT) on .825, but the batteries are just about shot and think the digipeater is off but is still sending beacons. 146.800 is where to listen for ISS.

Dave,
Yes omni or verticals will work, also dipoles on the HF bands (30 mHz
and lower).

I would like to buy a BC1000 pack radio with the webbing and
accessories. I plan on using it for WWII reenactments and public
displays. Actually owning and using this equipment really gives us a
great opportunity to educate the public on the histoy of
communications equipment during WWII.   Please email me if you know
where I might find one, or if you have one for sale at
dcwilliams_29id@yahoo.com

Thanks,

Chris Williams

Hello,

Does anyone know if the US sold Alinco DM-330MVT power supply is
easily converted for use with 220v 50hz? Maybe a jumper inside?

I'd like to purchase this supply but I need both 110 and 220 for
travel. Alinco is pretty much unreachable for help, and they have no
user manual listed on their website.

Thanks for the help!
-Moses
